## INVITED PAPERS

|                                                                                                      |                                                                                                             |    |
|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|----|
| Simulation Science .....                                                                             | Sato Tetsuya                                                                                                | 3  |
| Self-Organized Criticality and Plasma Fluctuation Dynamics .....                                     | Carreras Benjamin A., Lynch Vickie E., Newman David E.                                                      | 8  |
| Parallel Plasma Transport at Long Mean-Free Path .....                                               | Hazeltine Richard D.                                                                                        | 12 |
| The Influence of the Plasma Edge on the Performance of Tokamaks .....                                | Connor John W.                                                                                              | 15 |
| Non-Linear Interaction Mechanisms of an Ultra-Intense Laser Pulse with an Underdense Plasma<br>..... | Adam Jean C., Heron Anne, Laval Guy, Mora Patrick                                                           | 19 |
| Complexity in a Molecular String .....                                                               | Yoshikawa Kenichi                                                                                           | 25 |
| Does the Ultimate State of Thermal Turbulence Exist? .....                                           | Sano Masaki, Segawa Takehiko, Naert Antoine, Glazier James A.                                               | 28 |
| Micro- and Macro-Scale Self-Organization in a Dissipative Plasma<br>.....                            | Škorić Miloš M., Sato Tetsuya, Maluckov Aleksandra, Jovanović Moma S.                                       | 32 |
| Enhancement of Runaway Avalanche by Lower Hybrid Waves<br>.....                                      | Chan Vincent S., Parks Paul B., Chiu Shiu-Chu, Harvey Robert W.                                             | 35 |
| Behavior of Interchange Mode in Heliotron and Tokamak<br>.....                                       | Wakatani Masahiro, Ichiguchi Katsuji, Tatsuno Tomoya, Furukawa Masaru, Carreras Benjamin A., Lynch Vicky E. | 39 |
| Numerical Simulation of Internal Reconnection Event in Spherical Tokamak<br>.....                    | Hayashi Takaya, Mizuguchi Naoki, Sato Tetsuya, the Complexity Simulation Group                              | 43 |
| Self-Organization and Beltrami Conditions .....                                                      | Yoshida Zensho, Suzuki Takahiro                                                                             | 48 |
| Interesting Differences between Axisymmetric and Non-Axisymmetric Systems .....                      | Nakajima Noriyoshi                                                                                          | 50 |
| Energy Release and Plasma Heating by Reconnective Magnetic Relaxation .....                          | Jain Rekha, Vekstein Grigory                                                                                | 54 |
| Anomalous Resistivity and Particle Kinetic Effect in Collisionless Reconnection .....                | Horiuchi Ritoku, Sato Tetsuya                                                                               | 58 |
| Magnetic Reconnection and Self-organized Plasma Systems .....                                        | Yamada Masaaki, Ji Hantao                                                                                   | 62 |

## CONTRIBUTED PAPERS

|                                                                                                                            |                                                                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Characteristics of Low-q Discharge in the IR-T1 (Iran-Tokamak 1)<br>.....                                                  | Ghoranneviss Mahmood, Masnavi Majid, Kashani Mehrdad                                                                                                                                                                       | 69  |
| Bounce-Resonant Wave-Particle Interactions in Tokamaks with Elliptic Magnetic Surfaces<br>.....                            | Grishanov Nikolay I., De Azevedo Carlos A., De Assis Altair S.                                                                                                                                                             | 73  |
| Studies of Spectra of the Edge Plasma Fluctuations in Toroidal Magnetic Confinement Systems<br>.....                       | Pedrosa M. Angeles, Hidalgo Carlos, Balbin Rosa, Garcia-Cortes Isabel, van Milligen Boudewijn,<br>Sanchez Edilberto, Carreras Benjamin A., Newman David, Bleuel Johannes,<br>Endler Michael, Davies Steve, Matthews Guy F. | 77  |
| Particle and Heat Transports in the Scrape-Off Layer of JFT-2M Tokamak<br>.....                                            | Tsushima Akira, Uehara Kazuya, Amemiya Hiroshi                                                                                                                                                                             | 81  |
| Experimental Investigations of Plasma Turbulence Suppression in the DIII-D Tokamak<br>.....                                | McKee George R., Burrell Keith H., Doyle Edward J., Greenfield Charles M., Fonck Raymond J.,<br>Jackson Gary L., Murakami Masanori, Rettig Curt L., Staebler Gary M.                                                       | 85  |
| Simulation Study of Burning Control with Transport Barrier .....                                                           | Tateishi Gonta, Itoh Sanae-I., Yagi Masayoshi                                                                                                                                                                              | 89  |
| A Theory of Lead-Time in Probabilistic Excitation of L/H Transition<br>.....                                               | Toda Shinichiro, Itoh Sanae-I., Yagi Masatoshi, Itoh Kimitaka, Fukuyama Atsushi                                                                                                                                            | 93  |
| Complex Behavior of Internal Collapse Due to Self-Generated Radial Electric Field<br>.....                                 | Matsumoto Taro, Tokuda Shinji, Kishimoto Yasuaki, Takizuka Tomonori, Naitou Hiroshi                                                                                                                                        | 97  |
| Profile Effects of Plasma Rotation Velocity on Instability at Tokamak Internal Transport Barrier<br>.....                  | Li Jiquan, Long Yongxing, Qu Wenxiao, Huang Lin                                                                                                                                                                            | 101 |
| Ion Temperature Gradient Modes in Helical Systems .....                                                                    | Kuroda Tohru, Sugama Hideo, Kanno Ryutaro, Okamoto Masao                                                                                                                                                                   | 105 |
| Vlasov Continuum Contribution to Anomalous Plasma Transport .....                                                          | Yamagishi Tomejiro                                                                                                                                                                                                         | 109 |
| Theoretical Study of Inhomogeneous Plasma Turbulence ...                                                                   | Yagi Masatoshi, Itoh Sanae-I., Itoh Kimitaka, Fukuyama Atsushi                                                                                                                                                             | 113 |
| Analysis of Current Diffusive Ballooning Mode in Tokamaks<br>.....                                                         | Uchida Morihisa, Fukuyama Atsushi, Itoh Kimitaka, Itoh Sanae-I., Yagi Masatoshi                                                                                                                                            | 117 |
| Reactively Driven Drift Modes in Sheared Flow .....                                                                        | Vranješ Jovo, Jovanović Dušan, Shukla Padma K.                                                                                                                                                                             | 121 |
| Plasma Transport Modeling for Tokamak and Helical Systems<br>.....                                                         | Yamazaki Kozo, Nakajima Noriyoshi, Murakami Sadayoshi, Yokoyama Masayuki                                                                                                                                                   | 125 |
| Emission of Electromagnetic Waves from Langmuir Waves Generated by Cold Electron Beam Instability in Pair Plasmas<br>..... | Gyobu Daisuke, Sakai Jun-ichi, Eda Masanori, Neubert Torsten, Nambu Mitsuhiro                                                                                                                                              | 129 |

|                                                                                                                                 |                                                                                                                                                                        |     |
|---------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Generation of Electromagnetic Waves and Alfvén Waves during Coalescence of Magnetic Islands in Pair Plasmas .....               | Haruki Takayuki, Sakai Jun-ichi, Neubert Torsten, Nambu Mitsuhiro                                                                                                      | 133 |
| Generation of Magnetic Fields near Kelvin-Helmholtz Instability Region in Pair Plasmas .....                                    | Nakayama Takuya, Sakai Jun-ichi, Neubert Torsten, Nambu Mitsuhiro                                                                                                      | 138 |
| Particle Injection into the Wave Acceleration Phase Due to Nonlinear Wake Wave-Breaking .....                                   | Bulanov Sergei, Naumova Nataria, Pegoraro Francesco, Sakai Jun-ichi                                                                                                    | 141 |
| Acceleration of Energetic Ions by Oblique Magnetosonic Shock Waves .....                                                        | Masaki Tomohiro, Bessho Naoki, Ohsawa Yukiharu                                                                                                                         | 145 |
| Electron Trapping and Acceleration in an Oblique Magnetosonic Shock Wave .....                                                  | Bessho Naoki, Ohsawa Yukiharu                                                                                                                                          | 149 |
| Two-Dimensional Simulations of Relativistic Jet-Cloud Collisions .....                                                          | Zhang Hui-Min, Koide Shinji, Sakai Jun-Ichi                                                                                                                            | 153 |
| Formation of dc Potential Structure Due to Current-Driven Electrostatic Ion-Cyclotron Instability .....                         | Ishiguro Seiji, Sato Tetsuya                                                                                                                                           | 157 |
| Effect of a Transverse D.C. Electric Fields on Electrostatic Ion-Cyclotron Wave Instability .....                               | Sharma Suresh C., Sugawa Masao, Jain V.K.                                                                                                                              | 161 |
| Interaction of Unstable Ion Cyclotron Harmonic Waves and Lower Hybrid Waves in an Ion Beam-Plasma System .....                  | Utsunomiya Shohei, Sugawa Masao, Sharma Suresh C., Maehara Tsunehiro, Sugaya Reiji                                                                                     | 165 |
| Current Loop Coalescence in Dust Plasmas .....                                                                                  | Sakai Jun-ichi, Cramer Neil F.                                                                                                                                         | 169 |
| Simulation Studies on Grain Charging / Coagulation in Dusty Plasmas .....                                                       | Watanabe Kunihiko, Nishimura Kazumi, Ishiguro Seiji, Sato Tetsuya                                                                                                      | 173 |
| Stability Analysis of Wave Propagation in 2-Fluid Dusty Plasma System .....                                                     | Takaishi Takeshi, Kusano Kanya                                                                                                                                         | 177 |
| An Aspect of Discrete Dynamo Event in a Reversed-Field Pinch Plasma as Self-Organized Criticality .....                         | Yagi Yasuyuki, Bruskin Leonid G., Watanabe Masayuki, Bolzonella Tommaso, Shimada Toshio, Sakakita Hajime, Koguchi Haruhisa                                             | 180 |
| Effects of Periodic Helical Deformation Occurrences on the Flux Generation (Dynamo) in RFP .....                                | Maeyama Mitsuaki, Hotta Eiki                                                                                                                                           | 184 |
| Interpolation of Magnetic Surface Functions for an Axi-Symmetric Plasma .....                                                   | Yamaguchi Taiki, Maeyama Mitsuaki                                                                                                                                      | 188 |
| Multichord Photoemission Monitoring System in UV-Visible Range of a Reversed Field Pinch Machine TPE-RX .....                   | Sekine Shigeyuki, Osakabe Takeshi, Koguchi Haruhisa, Sakakita Hajime, Yagi Yasuyuki, Hirano Yoichi, Shimada Toshio, Nogi Yasuyuki                                      | 192 |
| Physics Issues of a Proposed Program, SPIRIT .....                                                                              | Ji Hantao, Yamada Masaaki                                                                                                                                              | 195 |
| Tilt Stabilization by Energetic Beam Ions in a Field-Reversed Configuration .....                                               | Nishimura Kazumi, Horiuchi Ritoku, Sato Tetsuya                                                                                                                        | 198 |
| High-Power Heating of CTs and STs in TS-3/4 Merging Experiments .....                                                           | Ueda Yoshinobu, Ono Yasushi                                                                                                                                            | 202 |
| Discussion on Some Additional Heating Schemes of an FRC Plasma .....                                                            | Okada Shigefumi, Kitano Katsuhisa, Matsumoto Hiromune, Yamanaka Koji, Ohtsuka Takayuki, Martin Adam K., Okubo Mamoru, Yoshimura Satoru, Sugimoto Satoshi, Goto Seiichi | 206 |
| Shape Control of Field-Reversed Configuration Plasma by Axial Compression .....                                                 | Kitano Katsuhisa, Matsumoto Hiromune, Okada Shigefumi, Goto Seiichi                                                                                                    | 210 |
| Magnetohydrodynamic Simulation on Magnetic Compression Process of a Field-Reversed Configuration Plasma .....                   | Kanki Takashi, Suzuki Yukihisa, Okada Shigefumi, Goto Seiichi                                                                                                          | 214 |
| Analysis of Averaged $\beta$ Value in Two Dimensional Equilibria of a Field-Reversed Configuration with End Mirror Fields ..... | Suzuki Yukihisa, Okada Shigefumi, Goto Seiichi                                                                                                                         | 218 |
| Particle Transport Properties in the Edge Plasma of a Field-Reversed Configuration .....                                        | Ohtsuka Takayuki, Okada Shigefumi, Goto Seiichi                                                                                                                        | 222 |
| Study on Confinement of Particle and Trapped Magnetic Flux in FRC .....                                                         | Ohi Shoichi                                                                                                                                                            | 226 |
| Tandem Mirror Transport Study with AIC Fluctuations .....                                                                       | Hojo Hitoshi, Nakamura Motoyuki, Tanaka Satoru, Ichimura Makoto, Mase Atsushi                                                                                          | 230 |
| Perspective of Creation of the Ambipolar D-T Fusion Reactor .....                                                               | Dimov Gennady I.                                                                                                                                                       | 234 |
| Magnetized Target Fusion: A Burning FRC Plasma in an Imploded Metal Can .....                                                   | Wurden Glen A., Schoenberg Kurt F., Siemon Richard E., Tuszewski Michel, Wysocki Fred J., Milroy Richard D.                                                            | 238 |
| Fusion Plasma Self-Ignition by Nonlinear Dynamic Evolution .....                                                                | Schoepf Klaus F.                                                                                                                                                       | 242 |
| $\beta$ Limit and Stabilization of Resistive Interchange Instability in Reversed Shear Tokamak .....                            | Furukawa Masaru, Nakamura Yuji, Wakatani Masahiro                                                                                                                      | 246 |
| $\delta f$ Simulation of Ion Neoclassical Transport ....                                                                        | Wang Weixing, Nakajima Noriyoshi, Okamoto Masao, Murakami Sadayoshi                                                                                                    | 250 |
| Simulation Study of Energetic Particle Distributions during ICRF and NBI Heating in the LHD Plasma .....                        | Murakami Sadayoshi, Nakajima Noriyoshi, Okamoto Masao                                                                                                                  | 255 |

| Simulation of Various Ionization Effects in Overdense Plasmas Irradiated by a Subpicosecond Pulse Laser .....            | Zhidkov Alexei, Sasaki Akira, Tajima Toshiki                                                                                                        | 414 |
| Study of Irradiation Uniformity Using a Lens Array and Non-Spherical Principal Focusing Lens .....                       | Zhang Jiatai, Qiu Yue, Yang Guolin, Zhou Guanlin, Ju Yong, Andreev N.E.                                                                             | 418 |
| Growth of Laser Ripple in a Collisional Magnetoplasma and Its Effect on Plasma Wave Excitation .....                     | Singh Nareshpal, Singh Tarsem                                                                                                                       | 423 |
| Langmuir Wave Excitation by Beating Gaussian Laser Beams in a Parabolic Plasma Channel .....                             | Sharma Ashok K., Jarwal Rajender K.                                                                                                                 | 427 |
| Hysteresis Effect in the Resonant Response of the Nonneutral Plasma Wave .....                                           | Yamazawa Yohei, Michishita Toshinori                                                                                                                | 431 |
| Observation of Asymmetric Sheath Structure in Multi-Component Plasma Containing Negative Ions .....                      | Koga Kazunori, Naitou Hiroshi, Kawai Yoshinobu                                                                                                      | 435 |
| Experiments on Solitons and Electron Holes in a Pure Electron Plasma Paper .....                                         | Tanaka Hitoshi, Maekawa Takashi, Asakawa Makoto, Terumichi Yasushi                                                                                  | 439 |
| Chaotic Lower Hybrid Fluctuations during the Anomalous Resistivity Phase of a High-Voltage Linear Plasma Discharge ..... | Inuzuka Hiroshi, Takada Yasumasa, Yamagiwa Keiichiro                                                                                                | 443 |
| Model of Silent Discharge Current and Its Chaotic Oscillation .....                                                      | Kimura Tetsuya, Maeda Joji, Kogoshi Sumio                                                                                                           | 447 |
| Kinetic Simulation on Ion Acoustic Wave in Gas Discharge Plasma with Convective Scheme .....                             | Matsunaga Yasushi, Hatori Tadatsugu, Kato Tomokazu                                                                                                  | 451 |
| Nonlocal Effects in an Excitation of Ion Acoustic Waves by an Ion Beam in a Plasma Cylinder .....                        | Sharma Suresh C., Sugawa Masao                                                                                                                      | 455 |
| Convective Instabilities of Transverse Wave in a Magnetized Chiral Media .....                                           | Torres-Silva Hector, Sakanaka Paulo H., Reggiani Norma                                                                                              | 459 |
| Energy Transfer from Low-Frequency Magnetosonic Pulses to Particles in a Two-Ion-Species Plasma .....                    | Toida Mieko, Dogen Daiju, Ohsawa Yukiharu                                                                                                           | 463 |
| Modeling ULF Magnetic Pulsations in Southern Hemisphere with Kinetic Alfvén Waves .....                                  | Da Silva Claudio E., Silva José C.X., De Assis Altair S., De Azevedo Carlos A.                                                                      | 467 |
| Alfvén Wave Dissipation in the Dipole Axisymmetric Magnetosphere .....                                                   | Grishanov Nikolay I., De Azevedo Carlos A., De Assis Altair S.                                                                                      | 470 |
| Fragmentation and Coalescence of Magnetic Flux Tubes in Weakly Ionized Plasmas .....                                     | Furusawa Kyoko, Sakai Jun-Ichi                                                                                                                      | 474 |
| Magnetic Field Generation during the Collision of Counter Streaming Flows .....                                          | Kazimura Yoshihiro, Sakai Jun-ichi, Bulanov Sergei                                                                                                  | 478 |

|                                                                                                                               |                                                                                                    |     |
|-------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-----|
| Strong Magnetic Implosion in Spherical Reversed Laser Corona: New Results and New Numerical Schemes for MHD Simulations ..... | Sokolov Igor V., Sakai Jun-ichi                                                                    | 482 |
| Self-Organization Scenario Relevant for the Formation of Prebiotic Complex Structures .....                                   | Sanduloviciu Mircea, Lozneanu Erzilia, Popescu Sebastian                                           | 486 |
| Self-Organization as a Possible Route to Fusion Energy .....                                                                  | Sanduloviciu Mircea, Lozneanu Erzilia, Popescu Sebastian                                           | 490 |
| Analysis of Self-Organizing Phenomena in Plasma Focus: Neutral Network Approach .....                                         | Purić Jagoš, Šević Dragutin, Ćuk Milivoje                                                          | 494 |
| Structure Formation in a Short Chain-Molecule System: A Molecular Dynamics Study .....                                        | Fujiwara Susumu, Sato Tetsuya                                                                      | 498 |
| On the Networking of Long-Living Filaments of Electric Current in Magnetically Confined Toroidal Plasmas .....                | Kukushkin Aleksandr, Rantsev-Kartinov Valentin                                                     | 501 |
| Self-Organization in the Two-Dimensional Kelvin-Helmholtz Instability at the Magnetopause .....                               | Miura Akira                                                                                        | 505 |
| A New Thermodynamic Plasma Acceleration Mechanism in the Spontaneous Fast Magnetic Reconnection .....                         | Shimizu Tohru, Ugai Masayuki                                                                       | 509 |
| Chaotic Reconnection Due to Mixing of the Vortex-Current Filaments .....                                                      | Yatsuyanagi Yuichi, Hatori Tadatsugu, Kato Tomokazu                                                | 512 |
| Relaxation of a Magnetized Plasma to States Other than Force-free .....                                                       | Dasgupta Brahmananda, Dasgupta Padmanabha, Mylavarapu Janaki S., Watanabe Tomohiko, Sato Tetsuya   | 516 |
| Spheromak as a Non-Taylor Relaxed State .....                                                                                 | Dasgupta Brahmananda, Mylavarapu Janaki S., Dasgupta Padmanabha                                    | 520 |
| A Magnetohydrodynamic Model of MRX Discharges .....                                                                           | Watanabe Tomo-Hiko, Hayashi Takaya, Sato Tetsuya                                                   | 524 |
| The Evolution of Structurally Unstable 2-D Magnetic Configuration with Two Null Lines .....                                   | Bulanov Sergei V., Echkina Eugenia Yu, Inovenkov Igor N., Pegoraro Franche, Pichushkin Victor V.   | 528 |
| The MHD Simulations of 3D Magnetic Reconnection near Null Point of Magnetic Configurations .....                              | Bulanov Sergei V., Echkina Eugenia Yu, Inovenkov Igor N., Pegoraro Francesco, Pichushkin Victor V. | 532 |
| Weakly Nonlinear Theory of Rayleigh-Taylor Instability .....                                                                  | Nishihara Katsunobu, Ikegawa Tadashi                                                               | 536 |
