Fundamental Tests of Quantum Mechanics

Edward S. Fry and Thomas Walther

I. Historical Overview	1
II. Bell Inequalities	4
III. Loopholes	6
IV. Experiments Based on Photons	8
V. Experiments Based on Atoms	9
VI. Contrasts between Photon- and Atom-Based Experiments	21
VII. Greenberger-Horne-Zeilinger	23
VIII. Applications	24
IX. Outlook and Perspectives	24
X. Acknowledgments	25
XI. References	25

Wave-Particle Duality in an Atom Interferometer

Stephan Dürr and Gerhard Rempe

I. Introduction	29
II. Experimental Setup	33
III. Bragg Reflection	36
IV. The Atom Interferometer	42
V. Delayed Choice	48
VI. Storing Which-Way Information	49
VII. Interferometer with Which-Way Information	54
VIII. Quantum Erasure	57
IX. Incomplete Which-Way Information	60
X. Wigner Function	65
XI. Conclusion	69
XII. Acknowledgments	69
XIII. References	69

Atom Holography

Fujio Shimizu

I. Introduction	73
II. Atomic Beam Source	74
III. Design of Thin-Film Hologram	77
IV. Quality Evaluation	89
V. Other Possible Techniques	90
VI. Conclusions	92

VII. Acknowledgments	92
VIII. References	92

Optical Dipole Traps for Neutral Atoms

Rudolf Grimm, Matthias Weidemüller, and Yurii B. Ovchinnikov

I. Introduction	95
II. Optical Dipole Potential	97
III. Experimental Issues	108
IV. Red-Detuned Dipole Traps	123
V. Blue-Detuned Dipole Traps	145
VI. Concluding Remarks	162
VII. Acknowledgments	165
VIII. References	165

Formation of Cold ($T \leq 1$ K) Molecules

J. T. Bahns, P. L. Gould, and W. C. Stwalley

I. Introduction	172
II. Nonoptical Cooling Techniques	191
III. Optical Cooling Techniques	195
IV. Formation of Cold Molecules Via Laser-Induced Photo-association . .	206
V. Conclusions and Future Directions	219
VI. Acknowledgments	219
VII. References	220

High-Intensity Laser-Atom Physics

C. J. Joachain, M. Dorr, and N. J. Kylstra

I. Introduction	226
II. Multiphoton Processes in Atoms and Ions	227
III. Theoretical Methods	237
IV. Conclusions and Future Developments	278
V. Acknowledgments	279
VI. References	279

Coherent Control of Atomic, Molecular, and Electronic Processes

Moshe Shapiro and Paul Brumer

I. Introduction	287
II. Preparation and Dynamics of a Continuum State	289
III. Bichromatic Control of a Superposition State	296
IV. The Coherent Control Principle	304
V. Weak-Field Coherent Control: Unimolecular Processes	304
VI. Strong-Field Incoherent Interference Control	325
VII. Coherent Control of Bimolecular Processes	332
VIII. Summary	342

IX. Acknowledgments	343
X. References	343

Resonant Nonlinear Optics in Phase Coherent Media

M. D. Lukin, P. Hemmer, and M. O. Scully

I. Introduction	347
II. Review of Atomic Coherence Studies	350
III. Resonant Enhancement of Nonlinear Optical Processes: The Concept	353
IV. Analysis of Nonlinear Optical Enhancement	357
V. Resonant Enhancement of Four-wave Mixing Processes	363
VI. Physical Origin of Nonlinear Enhancement	367
VII. Optical Phase Conjugation in Double- Λ Systems	371
VIII. For Optical Aberration Correction in Double- Λ Medium	375
IX. Nonlinear Spectroscopy of Dense Coherent Media	376
X. Outlook	382
XI. Acknowledgments	384
XII. References	384

The Characterization of Liquid and Solid Surfaces with Metastable Helium Atoms

H. Morgner

I. Introduction	387
II. Reactions of Metastable Helium Atoms with Matter: General Survey	393
III. Quantitative Evaluation of MIES Data	438
IV. Discussion of Selected Systems	449
V. Summary	482
VI. Acknowledgments	483
VII. References	483

Quantum Communication with Entangled Photons

Harald Weinfurter

I. Introduction	490
II. Entanglement: Basic Features	492
III. Quantum Communication with Entangled States	494
IV. The Building Blocks	503
V. The Quantum Communication Experiments	519
VI. Conclusion	528
VII. Acknowledgments	530
VIII. References	530
