Preface	vii
---------	-----

<b>1 Concepts From Dynamical Systems</b>	<b>1</b>
1.1 Flows, Maps, and Dynamical Systems . . . . .	1
1.2 Ordinary Differential Equations as Dynamical Systems . . . . .	3
1.3 Liouville's Theorem . . . . .	5
1.4 Structural Stability and Bifurcation . . . . .	6
1.5 Hamiltonian Systems . . . . .	7
1.6 Poincaré–Cartan Integral Invariant . . . . .	10
1.7 Generating Functions . . . . .	11
1.8 Infinite-Dimensional Hamiltonian Systems . . . . .	12
1.9 Symplectic Reduction . . . . .	13
1.10 Integrable Systems . . . . .	15
1.11 KAM Theory and Whiskered Tori . . . . .	16
1.12 Invariant Manifolds . . . . .	19
1.13 Stable and Unstable Manifolds . . . . .	21
1.14 Stable and Unstable Foliations . . . . .	24
1.15 Strong Stable and Unstable Manifolds . . . . .	26
1.16 Weak Hyperbolicity . . . . .	27
1.17 Homoclinic Orbits and Homoclinic Manifolds . . . . .	28
1.18 Singular Perturbations and Slow Manifolds . . . . .	29
1.19 Exchange Lemma . . . . .	31
1.20 Exchange Lemma and Observability . . . . .	33
1.21 Normal Forms . . . . .	34
1.22 Averaging Methods . . . . .	36

1.23	Lambda Lemma and the Homoclinic Tangle . . . . .	40
1.24	Smale Horseshoes and Symbolic Dynamics . . . . .	41
1.25	Chaos . . . . .	45
1.26	Hyperbolic Sets, Transient Chaos, and Strange Attractors . . . . .	47
1.27	Melnikov Methods . . . . .	48
1.28	Šilnikov Orbits . . . . .	51
<b>2</b>	<b>Chaotic Jumping Near Resonances: Finite-Dimensional Systems</b> . . . . .	<b>56</b>
2.1	Resonances and Slow Manifolds . . . . .	56
2.1.1	The Main Examples . . . . .	57
2.2	Assumptions and Definitions . . . . .	58
2.2.1	An Important Class of ODEs . . . . .	58
2.2.2	$N$ -Chains of Homoclinic Orbits . . . . .	62
2.2.3	Partially Slow Manifolds . . . . .	65
2.2.4	$N$ -Pulse Homoclinic Orbits . . . . .	66
2.3	Passage Lemmas . . . . .	68
2.3.1	Fenichel Normal Form . . . . .	68
2.3.2	Entry Conditions and Passage Time . . . . .	72
2.3.3	Local Estimates . . . . .	75
2.4	Tracking Lemmas . . . . .	86
2.4.1	The Local Map . . . . .	87
2.4.2	The Global Map . . . . .	88
2.4.3	A Note on the Purely Hamiltonian Case . . . . .	90
2.5	Energy Lemmas . . . . .	91
2.5.1	Energy as a Coordinate . . . . .	91
2.5.2	Energy of Entry Points . . . . .	92
2.5.3	Improved Local Estimates . . . . .	95
2.5.4	Energy of Projected Entry Points . . . . .	96
2.6	Existence of Multipulse Orbits . . . . .	98
2.6.1	Main Ideas . . . . .	99
2.6.2	Existence Theorem . . . . .	103
2.6.3	Remarks on Applications of the Main Theorem . . . . .	108
2.6.4	The Most Frequent Case: Chain-Independent Energy Functions . . . . .	110
2.6.5	Formulation With Other Invariants . . . . .	111
2.7	Disintegration of Invariant Manifolds Through Jumping . . . . .	114
2.8	Dissipative Chaos: Generalized Šilnikov Orbits . . . . .	116
2.9	Hamiltonian Chaos: Homoclinic Tangles . . . . .	123
2.9.1	Orbits Homoclinic to Invariant Spheres . . . . .	125
2.9.2	The Case of $n = 0$ : Orbits Heteroclinic to Slow $m$ -Tori . . . . .	126
2.9.3	The Case of $n = 0, m = 1$ : Orbits Homoclinic to Slow Periodic Solutions . . . . .	127
2.9.4	Resonant Energy Functions . . . . .	131
2.9.5	Phase Shifts of Opposite Sign . . . . .	135

2.10	Universal Homoclinic Bifurcations in Hamiltonian Applications . . . . .	136
2.11	Heteroclinic Jumping Between Slow Manifolds . . . . .	141
2.11.1	Partially Broken Heteroclinic Structures . . . . .	142
2.11.2	Cat's Eyes Heteroclinic Structures . . . . .	145
2.12	Partially Slow Manifolds of Higher Codimension . . . . .	147
2.12.1	Setup . . . . .	147
2.12.2	Passage Lemmas . . . . .	151
2.12.3	Tracking Lemmas . . . . .	151
2.12.4	Energy Lemmas . . . . .	152
2.12.5	Existence Theorem for Multipulse Orbits . . . . .	152
2.12.6	Multipulse Šilnikov Manifolds . . . . .	155
2.13	Bibliographical Notes . . . . .	157
<b>3</b>	<b>Chaos Due to Resonances in Physical Systems</b>	<b>159</b>
3.1	Oscillations of a Parametrically Forced Beam . . . . .	160
3.1.1	The Mechanical Model . . . . .	160
3.1.2	The Modal Approximation . . . . .	162
3.1.3	The Integrable Limit . . . . .	163
3.1.4	Homoclinic Bifurcations in the Purely Forced Modal Equations . . . . .	166
3.1.5	Structurally Stable Heteroclinic Connections for the Forced–Damped Beam . . . . .	167
3.1.6	Chaos: Generalized Šilnikov Orbits and Cycles for the Forced–Damped Beam . . . . .	172
3.1.7	Numerical Study . . . . .	176
3.2	Resonant Surface-Wave Interactions . . . . .	178
3.2.1	Derivation of the Amplitude Equations . . . . .	179
3.2.2	The $\epsilon = 0$ Limit . . . . .	186
3.2.3	Chaotic Dynamics for $\epsilon > 0$ : Generalized Šilnikov Cycles . . . . .	188
3.2.4	Passage to the Limit $\epsilon = \sqrt{\mu}$ . . . . .	191
3.2.5	The Inclusion of the $\mathcal{O}(\mu^v)$ Time-Dependent Terms . . . . .	194
3.2.6	Comparison With the Simonelli–Gollub Experiment . . . . .	194
3.3	Chaotic Pitching of Nonlinear Vibration Absorbers . . . . .	199
3.3.1	The Mechanical Model . . . . .	199
3.3.2	A More General Class of Problems . . . . .	200
3.4	Mechanical Systems With Widely Spaced Frequencies . . . . .	202
3.4.1	A Two-Mode Model . . . . .	203
3.4.2	The Geometry of Energy Transfer . . . . .	204
3.4.3	An Example . . . . .	207
3.5	Irregular Particle Motion in the Atmosphere . . . . .	211
3.5.1	The Model . . . . .	211
3.5.2	Phase Space Geometry and Its Physical Meaning . . . . .	212

3.6	Subharmonic Generation in an Optical Cavity . . . . .	215
3.6.1	A Two-Mode Model . . . . .	215
3.6.2	The Ideal Cavity ( $\epsilon = 0$ ) . . . . .	217
3.6.3	Chaotic Dynamics for $\epsilon > 0$ . . . . .	218
3.7	Intermittent Bursting in Turbulent Boundary Layers . . . . .	220
3.7.1	Modal Equations With Weak $O(2) \rightarrow D_4$ Symmetry Breaking . . . . .	223
3.7.2	The Slow Manifold . . . . .	224
3.7.3	Fast Heteroclinic Cycles . . . . .	225
3.8	Further Problems . . . . .	228
<b>4</b>	<b>Resonances in Hamiltonian Systems</b>	<b>231</b>
4.1	Resonant Equilibria . . . . .	231
4.1.1	Birkhoff Normal Form . . . . .	232
4.1.2	A Class of $1 : 2 : k$ Resonances . . . . .	233
4.1.3	Geometry of the Normal Form . . . . .	235
4.1.4	Homoclinic Orbits in the Two-Degree-of-Freedom Subsystem . . . . .	241
4.1.5	Homoclinic Jumping in the Normal Form . . . . .	244
4.1.6	Homoclinic Jumping and Chaos in the Full Problem . .	245
4.2	The Classical Water Molecule . . . . .	248
4.2.1	The Normal Form . . . . .	250
4.2.2	Homoclinic Chaos and Energy Transfer . . . . .	251
4.3	Dynamics Near Intersecting Resonances . . . . .	255
4.3.1	Arnold Diffusion in Near-Integrable Systems . . . . .	255
4.3.2	Cross-Resonance Diffusion . . . . .	257
4.3.3	Normal Form for Weak–Strong Double Resonances .	258
4.3.4	The Pendulum-Type Hamiltonian . . . . .	262
4.3.5	Dynamics in the Full Normal Form . . . . .	269
4.4	An Example From Rigid Body Dynamics . . . . .	271
4.5	Resonances in A Priori Unstable Systems . . . . .	277
4.5.1	A Physical Example . . . . .	278
4.5.2	Whiskered Tori . . . . .	280
4.5.3	Resonances on Invariant Manifolds . . . . .	282
4.5.4	Cross-Resonance Diffusion, Homoclinic Bifurcations, and Horseshoes . . . . .	284
<b>5</b>	<b>Chaotic Jumping Near Resonances: Infinite-Dimensional Systems</b>	<b>286</b>
5.1	The Main Examples . . . . .	287
5.2	Assumptions and Definitions . . . . .	288
5.2.1	The Phase Space and the Evolution Equation . . . . .	288
5.2.2	Regularity and Geometric Assumptions . . . . .	289
5.2.3	$N$ -Chains of Homoclinic Orbits . . . . .	295
5.3	Invariant Manifolds and Foliations . . . . .	298
5.3.1	Partially Slow Manifold . . . . .	298

5.3.2	Preliminary Normal Form . . . . .	304
5.3.3	Smooth Foliations for $W_{\text{loc}}^s(\mathcal{M}_{\epsilon,k})$ and $W_{\text{loc}}^u(\mathcal{M}_{\epsilon,k})$	306
5.3.4	$N$ -Pulse Homoclinic Orbits . . . . .	309
5.4	Passage Lemmas . . . . .	310
5.4.1	Fenichel Normal Form . . . . .	311
5.4.2	Entry Conditions and Passage Time . . . . .	314
5.4.3	Local Estimates . . . . .	316
5.5	Tracking Lemmas . . . . .	318
5.5.1	The Local Map . . . . .	319
5.5.2	The Global Map . . . . .	321
5.6	Energy Lemmas . . . . .	321
5.6.1	Energy as a Coordinate . . . . .	322
5.6.2	Energy of Entry Points . . . . .	323
5.6.3	Improved Local Estimates . . . . .	326
5.6.4	Energy of Projected Entry Points . . . . .	328
5.7	Multipulse Homoclinic Orbits in Sobolev Spaces . . . . .	329
5.7.1	Definitions and Notation . . . . .	329
5.7.2	Existence Theorem . . . . .	330
5.7.3	Remarks on Applications of the Main Theorem . . . . .	336
5.7.4	Chain-Independent Energy Functions . . . . .	336
5.7.5	Formulation With Other Invariants . . . . .	336
5.8	Disintegration of Invariant Manifolds Through Jumping . . . . .	337
5.9	Generalized Šilnikov Orbits . . . . .	338
5.10	The Purely Hamiltonian Case . . . . .	341
5.10.1	Universal Homoclinic Bifurcations . . . . .	342
5.11	Homoclinic Jumping in the Perturbed NLS Equation . . . . .	342
5.11.1	Homoclinic Tree in the Forced NLS Equation ( $\hat{D} \equiv 0$ ) . . . . .	342
5.11.2	$N$ -Pulse Orbits in the Damped–Forced NLS Equation . . . . .	346
5.11.3	Šilnikov-Type Orbits in the Damped–Forced NLS Equation . . . . .	348
5.12	Partially Slow Manifolds of Higher Codimension . . . . .	354
5.12.1	Setup . . . . .	354
5.12.2	Existence Theorem for Multipulse Orbits . . . . .	358
5.12.3	Multipulse Šilnikov Manifolds . . . . .	362
5.13	Homoclinic Jumping in the CNLS System . . . . .	363
5.13.1	Homoclinic Jumping in the Forced CNLS Equations ( $\alpha_k = \beta_k = 0$ ) . . . . .	364
5.13.2	$N$ -Pulse Jumping Orbits in the Damped–Forced CNLS System ( $\beta_k = 0$ ) . . . . .	365
5.13.3	$N$ -Pulse Šilnikov Manifolds in the Full CNLS System . . . . .	366
5.14	Bibliographical Notes . . . . .	369

<b>A Elements of Differential Geometry</b>	<b>371</b>
A.1 Manifolds . . . . .	371
A.2 Tangent, Cotangent, and Normal Bundles . . . . .	372
A.3 Transversality . . . . .	374
A.4 Maps on Manifolds . . . . .	375
A.5 Regular and Critical Points . . . . .	377
A.6 Lie Derivative . . . . .	377
A.7 Lie Algebras, Lie Groups, and Their Actions . . . . .	378
A.8 Orbit Spaces . . . . .	379
A.9 Infinite-Dimensional Manifolds . . . . .	380
A.10 Differential Forms . . . . .	381
A.11 Maps and Differential Forms . . . . .	383
A.12 Exterior Derivative . . . . .	384
A.13 Closed and Exact Forms . . . . .	385
A.14 Lie Derivative of Forms . . . . .	385
A.15 Volume Forms and Orientation . . . . .	385
A.16 Symplectic Forms . . . . .	386
A.17 Poisson Brackets . . . . .	387
A.18 Integration on Manifolds and Stokes's Theorem . . . . .	388
<b>B Some Facts From Analysis</b>	<b>390</b>
B.1 Fourier Series . . . . .	390
B.2 Gronwall Inequality . . . . .	392
B.3 Banach and Hilbert Spaces . . . . .	393
B.4 Differentiation and the Mean Value Theorem . . . . .	394
B.5 Distributions and Generalized Derivatives . . . . .	396
B.6 Sobolev Spaces . . . . .	397
B.7 $C^\infty$ Bump Functions . . . . .	398
B.8 Factorization of Functions With a Zero . . . . .	399
