

Contents

1. Introduction	1
1.1 A Few Examples	5
1.1.1 Antidot Superlattices	5
1.1.2 Ballistic Weak Localization in Electron Billiards	8
1.1.3 Mesoscopic Orbital Magnetism	11
1.1.4 Andreev Billiards	12
1.1.5 Quantum Corrals	13
1.2 Purpose of This Book and Overview	15
2. Elements of Modern Semiclassical Theory	19
2.1 Green Functions and Trace Formulas	19
2.1.1 Semiclassical Green Function	20
2.1.2 Density of States	24
2.1.3 Berry–Tabor Trace Formula	25
2.1.4 Gutzwiller Trace Formula	26
2.2 Spectral Correlations	29
2.3 Thermodynamic Quantities	32
2.4 Semiclassical Linear Response	35
2.4.1 Basic Quantum Mechanical Relations	36
2.4.2 Semiclassical Approximation: Overview	39
2.4.3 Chaotic Case	40
2.4.4 Integrable Case	45
2.4.5 Dynamic Susceptibilities	46
3. Ballistic Quantum Transport	49
3.1 Bulk Conductivity	51
3.1.1 Semiclassical Approach	51
3.1.2 Antidot Lattices: Experiments	55
3.1.3 Antidot Lattices: Conductivity Calculations	56
3.2 Transport Through Phase-Coherent Conductors	62
3.2.1 Semiclassical Approach to Landauer Conductance	63
3.2.2 Trajectory Analysis	66
3.2.3 Weak Localization	66
3.2.4 Finite Antidot Arrays	68

3.2.5	Conductance Fluctuations	71
3.3	Limitations of Present Semiclassical Transport Theory	73
4.	Orbital Magnetism	79
4.1	Historical Background and Overview	79
4.2	Basic Concepts	83
4.2.1	Definitions	83
4.2.2	Bulk Properties: De Haas–van Alphen Effect and Landau Diamagnetism	84
4.2.3	Thermodynamics in the Mesoscopic Regime	87
4.3	Chaotic Systems	90
4.3.1	Semiclassical Approaches	91
4.3.2	Persistent Currents	94
4.3.3	Magnetic Susceptibilities	99
4.3.4	Systems with Diffusive Dynamics	104
4.3.5	Relation to Experiments	104
4.4	Perturbed Integrable Systems: General Framework	105
4.4.1	Magnetic Susceptibility	107
4.4.2	Integrable Versus Chaotic Behavior	109
4.5	Perturbed Integrable Systems: Square Quantum Wells	110
4.5.1	The Weak-Field Density of States	111
4.5.2	Susceptibility of Individual Samples and Ensemble Averages	114
4.5.3	Bouncing-Ball Magnetism	121
4.5.4	De Haas–van Alphen-Like Oscillations	126
4.6	Systems Integrable at Arbitrary Fields: Ring Geometries	128
4.6.1	Persistent Currents	129
5.	Disorder Effects	135
5.1	Characterization	135
5.2	Semiclassical Treatment of Disorder in the Ballistic Limit	138
5.2.1	The Disorder Model	138
5.2.2	Effect on the Single-Particle Green Function	139
5.2.3	Effect on the Two-Particle Green Function	143
5.3	High Landau Levels in a Smooth Disorder Potential	144
5.4	Magnetic Susceptibility of Ballistic Quantum Dots	147
5.4.1	Fixed-Size Impurity Average	147
5.4.2	Combined Impurity and Size Average	150
5.4.3	Concluding Remarks	154
5.5	From Ballistic to Diffusive Dynamics	155
5.5.1	Spectral Correlations in the Diffusive Limit	156
5.5.2	Spectral Correlations in Disordered Nondiffusive Systems	156
5.5.3	Orbital Magnetism	161

6. Interaction Effects	167
6.1 Diagrammatic Perturbation Theory	170
6.2 Semiclassical Formalism	171
6.3 Orbital Magnetism of Interacting Diffusive Systems	173
6.3.1 Disordered Rings	174
6.3.2 Relation to Experiments and Other Theoretical Approaches	176
6.3.3 Two-Dimensional Diffusive Structures	177
6.4 Orbital Magnetism of Interacting Ballistic Quantum Dots	179
6.4.1 Ensemble of Squares	180
6.4.2 First-Order Diagonal Channel	181
6.4.3 Renormalization from Higher-Order Diagonal Contributions	182
6.4.4 Nondiagonal Channel in Regular Systems	184
6.5 Comparison Between Integrable and Chaotic Structures	185
6.6 Comparison with Experiment	187
7. Concluding Remarks	189
A. Appendices	195
A.1 Trace Integrals over Semiclassical Green Functions	195
A.1.1 Auxiliary Integrals	195
A.1.2 Integrals of Products of Two Retarded Green Functions	198
A.1.3 Integrals of Products of a Retarded and an Advanced Green Function	199
A.2 Numerical Calculations for Susceptibilities of Square Quantum Dots	201
A.2.1 Clean Case	201
A.2.2 Weak Disorder	202
A.2.3 Thermodynamics	202
A.3 Semiclassical and Quantum Results for Bulk Mean Free Paths	203
References	206
