Preface	v
1 Introduction	1
2 Instabilities and Patterns in Hydrodynamical Systems	15
2.1 Rayleigh-Bénard instability	15
2.2 Taylor-Couette instability	17
2.3 Liquid crystal instabilities	20
3 Instabilities and Patterns in Reaction-Diffusion Systems	25
3.1 Chemical instabilities	25
3.2 Defect microstructures in irradiated materials	31
3.3 Plastic deformation and dislocation patterns	32
4 Generic Aspects of Pattern-Forming Instabilities	37
4.1 Phenomenology	37
4.2 Reaction-diffusion dynamics and stability	39
4.3 Reduced dynamics and amplitude equations	41
4.4 Spatial patterns: selection and stability	43
4.4.1 Isotropic systems	43
4.4.2 Anisotropic systems	49
4.5 Phase dynamics of periodic patterns	52
4.5.1 Isotropic systems	52
4.5.2 Anisotropic systems	59

5 The Hopf Bifurcation and Related Spatio-Temporal Patterns	65
5.1 The generic aspects of oscillatory media	65
5.1.1 The complex Ginzburg-Landau equation	65
5.1.2 Phase dynamics and spiral waves	67
5.2 Real chemical systems and the complex Ginzburg-Landau equation	72
5.2.1 Determination of the CGLE parameters in real systems	72
5.2.2 CGLE parameters of the BZ reaction	75
5.3 The effect of natural forcings on chemical oscillators	77
5.3.1 The effect of convection on chemical waves	77
5.3.2 The effect of vertical gradients on chemical oscillations	79
5.4 Conclusions	82
6 The Turing Instability and Associated Spatial Structures	87
6.1 The Turing mechanism	87
6.2 The search for Turing structures	90
6.2.1 Convectively driven chemical patterns	90
6.2.2 Double diffusion and chemical fingers	91
6.3 At last, genuine Turing structures?	93
6.4 The interaction between Turing and Hopf instabilities	98
6.4.1 Amplitude equations for Turing-Hopf modes	98
6.4.2 Pattern selection for codimension-2 Turing-Hopf bifurcations	99
6.4.3 Defects, defect bifurcations and localized structures	102
7 Defects and Defect Bifurcations	107
7.1 Generic existence of defects	108
7.2 Examples of defects	111
7.2.1 Codimension-1 defects	111
7.2.2 Codimension-2 defects	112
7.3 Defects and disorder	114
7.4 Bifurcation of defects	121
8 The Effect of External Fields	127
8.1 Spatial forcing of stationary patterns	129
8.1.1 Resonant forcings	129
8.1.2 Near-resonant forcings and commensurate incommensurate transitions	130
8.2 Temporal forcing of a Hopf bifurcation	133
8.3 Temporal forcing of one-dimensional wave patterns	135
8.3.1 Pattern selection and defects	135
8.3.2 Experimental observations	146
8.4 Temporal forcing of two-dimensional wave patterns	147
8.4.1 Isotropic systems	147
8.4.2 Anisotropic systems	148

8.5	Spatial forcing of wave patterns	151
8.6	Flow field effects on pattern forming instabilities	155
8.7	The effect of noise on wave patterns	158
8.8	Conclusions	162
9	Fronts	169
9.1	One-dimensional aspects	171
9.1.1	The leading-edge approach	171
9.1.2	Breakdown of the leading-edge approach	174
9.1.3	Envelope fronts	174
9.1.4	Multiple fronts	177
9.2	Two-dimensional aspects	179
9.2.1	Propagation of roll patterns	181
9.2.2	Propagation of hexagonal patterns	184
10	Pattern Formation: Generic versus Nongeneric Aspects	189
10.1	Kinetic coefficients	189
10.2	Nongradient dynamics	190
10.3	Experimental set-ups	192
11	Microstructures in Irradiated Materials	197
11.1	Particle irradiation of metals and alloys	197
11.1.1	A rate theory model for microstructure evolution under irradiation	198
11.1.2	Dislocation loop dynamics	200
11.1.3	The linear stability analysis	204
11.1.4	The weakly nonlinear regime	205
11.1.5	Numerical analysis	209
11.1.6	Conclusions	216
11.2	Laser induced deformation of surfaces	217
11.2.1	Thin film dynamics under laser irradiation	221
11.2.2	Linear stability analysis	222
11.2.3	Weakly nonlinear analysis	224
11.2.4	Finite size effects	227
11.2.5	Conclusions	228
12	Plastic Instabilities	231
12.1	Dislocation dynamics and rate equations	232
12.2	Stability analysis and bifurcations	234
12.3	Nonlinear analysis	236
12.4	Multiple slip	237
13	Afterword	241
14	Appendices	245
14.1	Bifurcations and normal forms	245

14.1.1 Bifurcations	245
14.1.2 Stability of equilibria	248
14.1.3 Lyapounov functions	250
14.1.4 Typical bifurcation examples	252
14.1.5 The Hopf bifurcation theorem	255
14.1.6 The Center Manifold Theorem	257
14.2 More about dynamical models	258
14.2.1 Proctor-Sivashinsky	258
14.2.2 Ginzburg-Landau	269
14.3 The Brusselator: a toy model for pattern formation in RD systems	275
14.3.1 The Turing instability	277
14.3.2 The Hopf Instability	289
14.3.3 Amplitude equations for Turing-Hopf modes	292
14.4 Resonant forcings of nonlinear oscillators	293
14.4.1 Parametric forcing	293
14.4.2 Strong resonances in spatially extended systems	295
14.4.3 Stationary solutions and resonance horns	296
14.4.4 From oscillations to excitability	298
Index	303
