

MAIN ENTRIES

02-A	Testing Equipment— Mechanical.....	1	08-E	Thermodynamics, Nonequilibrium.....	311
02-C	Testing, Nondestructive.....	25	12-A	Thermoelectric Devices.....	339
16-C	Thermal Annealing.....	67	11-D	Thermoluminescence.....	355
11-D	Thermal Conduction in Metallic Liquids.....	89	16-B	Thin Films, Electrical Properties.....	373
11-D	Thermal Conduction in Nonmetallic Liquids.....	103	16-B	Thin Films, Nonelectronic Properties.....	387
11-D	Thermal Conduction in Solids.....	133	16-C	Thin-Film Deposition.....	409
16-B	Thermal Insulation Materials..	151	14-B	Thin-Film Integrated Ferroelectrics.....	429
09-A	Thermal Plasma Devices.....	163	18-A	Tidal and Wave Energy.....	453
08-C	Thermal Processes.....	193	02-C	Time and Frequency, Measurement of.....	467
08-B	Thermal Properties of Gases...	209	19-C	Tomography, Positron- Emission.....	485
12-D	Thermionic Emission.....	229	20-C	Topography, Geographical.....	525
18-A	Thermoacoustic Engines and Refrigerators.....	245	15-C	Topography, X-Ray.....	533
17-E	Thermochemistry.....	265	01-D	Topological Phase Effects.....	549
08-E	Thermodynamics, Equilibrium.....	281		Contents of Previous Volumes.....	585

The subject matter in the *Encyclopedia of Applied Physics* is presented in approximately 500 individual articles, arranged alphabetically. The topics can be classified into 20 sections, similar to the AIP Physics and Astronomy Classification Scheme (PACS):

01	General Aspects: Mathematical, Computational, and Information Techniques	11	Condensed Matter B: Thermal, Acoustic, and Quantum Properties
02	Measurement Science, General Devices and/or Methods	12	Condensed Matter C: Electronic Properties
03	Nuclear and Elementary Particle Physics	13	Condensed Matter D: Magnetic Properties
04	Atomic and Molecular Physics	14	Condensed Matter E: Dielectrical and Optical Properties
05	Electricity and Magnetism	15	Condensed Matter F: Surfaces and Interfaces
06	Optics (classical and quantum)	16	Materials Science
07	Acoustics	17	Physical Chemistry
08	Thermodynamics and Properties of Gases	18	Energy Research and Environmental Physics
09	Fluids and Plasma Physics	19	Biophysics and Medical Physics
10	Condensed Matter A: Structure and Mechanical Properties	20	Geophysics, Meteorology, Space Physics, and Aeronautics

Each article has been assigned a code number consisting of two digits which denotes the section, and a letter which gives the type of article. There are six types: A = Devices, Equipment; B = Materials; C = Methods, Processes; D = Phenomena, Effects; E = Scientific or Technological Fields; F = Institutions, Companies, Societies and other organizations.
