

Contents

Preface	ix
Acknowledgments	xiii
Chapter 1	
Geometrical Background	1
1.1 Smooth Manifolds and Maps	1
1.2 Matrix Lie Groups	13
1.3 Principal Bundles	28
1.4 Connections and Curvature	35
1.5 Associated Bundles and Matter Fields	46
Chapter 2	
Physical Motivation	53
2.1 General Framework For Classical Gauge Theories	53
2.2 Electromagnetic Fields	57
2.3 Spin Zero Electrodynamics	71
2.4 Spin One-Half Electrodynamics	84
2.5 $SU(2)$ -Yang-Mills-Higgs Theory on \mathbb{R}^n	123
2.6 Epilogue	159
Chapter 3	
Frame Bundles and Spacetimes	161
3.1 Partitions of Unity, Riemannian Metrics and Connections	161
3.2 Continuous Versus Smooth	168
3.3 Frame Bundles	172
3.4 Minkowski Spacetime	187
3.5 Spacetime Manifolds and Spinor Structures	193
Chapter 4	
Differential Forms and Integration	207
Introduction	207
4.1 Multilinear Algebra	207
4.2 Vector-Valued Forms	230

4.3	Differential Forms	238
4.4	The de Rham Complex	245
4.5	Tensorial Forms	257
4.6	Integration on Manifolds	268
4.7	Stokes' Theorem	288
Chapter 5		
de Rham Cohomology		297
Introduction		297
5.1	The de Rham Cohomology Groups	298
5.2	Induced Homomorphisms	303
5.3	Cochain Complexes and Their Cohomology	318
5.4	The Mayer-Vietoris Sequence	324
5.5	The Cohomology of Compact, Orientable Manifolds	335
5.6	The Brouwer Degree	340
5.7	The Hopf Invariant	346
Chapter 6		
Characteristic Classes		351
6.1	Motivation	351
6.2	Algebraic Preliminaries	355
6.3	The Chern-Weil Homomorphism	367
6.4	Chern Numbers	379
6.5	\mathbb{Z}_2 -Čech Cohomology for Smooth Manifolds	388
Appendix		
A.1	Seiberg-Witten Monopoles on \mathbb{R}^4	407
References		425
Symbols		431
Index		437
