| PREFACE | xi |
| 1 PLASMAS AND DUST | 1 |
| 1.1 Plasmas as the fourth state of matter | 1 |
| 1.2 Dust | 2 |
| 1.3 Dusty plasmas | 3 |
| 1.4 Basic properties | 5 |
| 1.5 Analogies and differences | 6 |
| 1.6 Reviews and books | 8 |
| 1.7 Structure of the book | 8 |
| 2 CHARGING MECHANISMS AND EXPERIMENTS | 11 |
| 2.1 Grain charging | 11 |
| 2.2 Charging mechanisms for isolated grains | 15 |
| 2.2.1 Standard model: primary charging | 15 |
| 2.2.2 Secondary electron emission | 22 |
| 2.2.3 Photo-emission | 25 |
| 2.2.4 Electrostatic disruption | 26 |
| 2.2.5 Field emission | 27 |
| 2.2.6 Centrifugal disruption | 27 |
| 2.3 Charging model for grain ensembles | 28 |
| 2.3.1 Havnes model | 29 |
| 2.4 Charging in magnetized plasmas | 30 |
| 2.4.1 Collisionless theory for infinite Debye lengths | 31 |
| 2.4.2 Combined effects of space charge and collisions | 32 |
| 2.5 Dusty plasma experiments | 33 |
| 2.5.1 Plasma processing and etching | 34 |
| 2.5.2 Charging experiments and dust modes | 34 |
| 2.6 Single grain dynamics and planetary rings | 36 |
| 3 SPACE OBSERVATIONS | 41 |
| 3.1 Generalities | 41 |
| 3.2 Noctilucent clouds and magnetospheric dust | 43 |
| 3.3 Circumsolar dust rings and zodiacal light | 44 |
| 3.4 Planetary rings | 46 |

| | | |
|----------|--|-----------|
| 3.4.1 | Jupiter | 47 |
| 3.4.2 | Saturn | 49 |
| 3.4.3 | Uranus | 55 |
| 3.4.4 | Neptune | 56 |
| 3.5 | Cometary plasmas | 58 |
| 3.6 | Interplanetary dust | 62 |
| 3.7 | Interstellar dust clouds | 65 |
| 4 | MULTISPECIES FORMALISM AND WAVES | 67 |
| 4.1 | General framework | 67 |
| 4.2 | From Liouville to kinetic equations | 68 |
| 4.3 | Specific complications for dusty plasmas | 70 |
| 4.4 | Macroscopic fluid equations | 72 |
| 4.4.1 | Macroscopic averages | 72 |
| 4.4.2 | Continuity equations | 74 |
| 4.4.3 | Equations of motion | 74 |
| 4.4.4 | Pressure equations | 75 |
| 4.4.5 | Set of basic fluid equations | 77 |
| 4.4.6 | Conservation of charge | 78 |
| 4.5 | Maxwell's equations | 78 |
| 4.6 | Waves in multispecies plasmas | 79 |
| 4.6.1 | Introductory remarks | 79 |
| 4.6.2 | Equilibrium discussions | 81 |
| 4.6.3 | Linearization procedure | 82 |
| 4.7 | Linear parallel modes and equilibrium streaming | 84 |
| 4.8 | Arbitrary angles of wave propagation without streaming | 86 |
| 4.8.1 | General expressions | 86 |
| 4.8.2 | Oblique electrostatic modes | 87 |
| 4.8.3 | Perpendicular propagation | 88 |
| 5 | ELECTROSTATIC MODES | 89 |
| 5.1 | Introduction | 89 |
| 5.2 | Linear parallel modes in ordinary plasmas | 90 |
| 5.2.1 | Langmuir waves | 90 |
| 5.2.2 | Buneman instabilities | 91 |
| 5.2.3 | Ion-acoustic modes | 92 |
| 5.3 | Dusty plasma modes | 95 |
| 5.3.1 | Pioneering work on dust modified modes | 95 |
| 5.3.2 | Dust-ion-acoustic waves | 97 |
| 5.3.3 | Dust-acoustic waves | 98 |
| 5.3.4 | Two-stream and Buneman instabilities | 99 |
| 5.4 | General nonlinear wave theory | 102 |
| 5.4.1 | Arbitrary amplitudes and Sagdeev potential | 102 |
| 5.4.2 | Reductive perturbation theory | 109 |

| | | |
|----------|---|------------|
| 5.4.3 | Korteweg-de Vries-type expansions | 111 |
| 5.4.4 | Modified Korteweg-de Vries-type expansions | 112 |
| 5.4.5 | Higher-order expansions | 113 |
| 5.4.6 | Expansion of the Sagdeev potential | 114 |
| 5.5 | Nonlinear dusty plasma modes | 116 |
| 5.5.1 | Solitons | 116 |
| 5.5.2 | Double layers | 119 |
| 5.6 | Oblique propagation | 121 |
| 5.6.1 | Upper and lower hybrid modes | 121 |
| 5.6.2 | Dust hybrid modes | 122 |
| 5.6.3 | Nonlinear developments | 124 |
| 5.7 | Collisional and kinetic effects | 124 |
| 6 | ELECTROMAGNETIC MODES | 127 |
| 6.1 | Parallel electromagnetic waves | 127 |
| 6.1.1 | Dispersion law, resonances and cut-off frequencies . | 127 |
| 6.1.2 | Whistler waves | 129 |
| 6.1.3 | Alfvén waves | 129 |
| 6.1.4 | Cometary turbulence | 131 |
| 6.2 | Dusty plasmas | 133 |
| 6.2.1 | Dust whistler waves | 134 |
| 6.2.2 | Charged dust in cometary plasmas | 135 |
| 6.3 | Magnetosonic modes | 139 |
| 6.3.1 | Multispecies plasmas | 139 |
| 6.3.2 | Dusty plasmas | 140 |
| 6.4 | Reductive perturbation for nonlinear waves | 142 |
| 6.4.1 | Parallel propagation | 142 |
| 6.4.2 | Oblique and perpendicular modes | 147 |
| 7 | FLUCTUATING DUST CHARGES | 151 |
| 7.1 | Charge fluctuations | 151 |
| 7.1.1 | History | 151 |
| 7.1.2 | Continuity equations and attachment frequencies . | 154 |
| 7.1.3 | Momentum equations | 156 |
| 7.1.4 | Charging frequencies | 156 |
| 7.2 | Parallel electrostatic waves with variable dust charges . | 159 |
| 7.2.1 | Dispersion law in general | 159 |
| 7.2.2 | No dust dynamics | 163 |
| 7.2.3 | Langmuir modes | 163 |
| 7.2.4 | Dust-ion-acoustic modes | 166 |
| 7.2.5 | Dust-acoustic modes | 167 |
| 7.2.6 | Zero-frequency modes | 170 |
| 7.2.7 | Case studies: Rings of Saturn | 170 |
| 7.2.8 | Implications for other electrostatic modes | 172 |

| | | |
|----------|--|------------|
| 7.3 | Kinetic theory and nonlinear developments | 173 |
| 7.3.1 | Kinetic treatments | 173 |
| 7.3.2 | Electrostatic solitons | 174 |
| 7.4 | Electromagnetic waves with variable dust charges | 174 |
| 7.5 | Nonlinear electromagnetic waves with variable dust charges | 179 |
| 7.6 | Oblique and perpendicular modes | 183 |
| 8 | SELF-GRAVITATION | 185 |
| 8.1 | Janus faces of Jeans instabilities | 185 |
| 8.1.1 | Jeans (in)stabilities | 185 |
| 8.1.2 | Physics of the classic Jeans instability | 186 |
| 8.2 | Revisiting the Jeans swindle | 187 |
| 8.2.1 | Basic stationary state | 188 |
| 8.2.2 | Linear perturbations | 190 |
| 8.2.3 | Standard assumption of a uniform basic state | 192 |
| 8.2.4 | Local solutions | 193 |
| 8.2.5 | Global solutions | 194 |
| 8.2.6 | Caveat | 195 |
| 8.3 | Self-gravitation of dusty plasmas | 196 |
| 8.3.1 | Different aspects of gravitation | 196 |
| 8.3.2 | Other factors | 197 |
| 8.3.3 | Chronology | 198 |
| 8.4 | Jeans-Buneman modes | 199 |
| 8.4.1 | Global results | 199 |
| 8.4.2 | Cold and massive dust | 200 |
| 8.4.3 | Boltzmann electrons | 201 |
| 8.4.4 | Boltzmann electrons and ions | 202 |
| 8.4.5 | Oblique electrostatic modes | 203 |
| 8.5 | Magnetosonic Jeans modes | 204 |
| 8.5.1 | Inertialess electrons and ions | 204 |
| 8.5.2 | Alfvén-Jeans modes in the absence of neutral gas . | 205 |
| 8.5.3 | Charged and neutral dust | 208 |
| 8.5.4 | Interstellar dust | 210 |
| 8.5.5 | Summing up | 211 |
| 8.6 | Nonlinear modes | 212 |
| 9 | MASS AND SIZE DISTRIBUTIONS | 215 |
| 9.1 | Dust mass distributions | 215 |
| 9.2 | Parallel modes in a fluid description | 216 |
| 9.2.1 | Dust-acoustic modes | 216 |
| 9.2.2 | Continuous mass distribution | 220 |
| 9.2.3 | Circularly polarized electromagnetic modes | 224 |
| 9.2.4 | Nonlinear dust-acoustic modes | 225 |
| 9.3 | Kinetic equations for dust distributions | 226 |

| | |
|---|------------|
| 10 OTHER MODES | 227 |
| 10.1 Inhomogeneous plasmas and mode coupling | 227 |
| 10.2 Rayleigh-Taylor, Kelvin-Helmholtz instabilities and vortices | 228 |
| 10.2.1 Rayleigh-Taylor instabilities | 228 |
| 10.2.2 Kelvin-Helmholtz instabilities | 229 |
| 10.2.3 Vortex formation | 231 |
| 10.3 Surface waves | 233 |
| 10.4 Self-similar expansions | 234 |
| 10.5 Lattice waves | 235 |
| 11 CONCLUSIONS AND OUTLOOK | 239 |
| 11.1 Comparison with observations | 239 |
| 11.1.1 Spokes in Saturn's B ring | 239 |
| 11.1.2 Planetary rings | 240 |
| 11.1.3 Comets | 241 |
| 11.1.4 Interstellar dust | 242 |
| 11.2 Summing up | 243 |
| 11.3 Outlook | 244 |
| BIBLIOGRAPHY | 245 |
| INDEX | 261 |
