Oscillatory Spatiotemporal Signal Detection in Climate Studies: A Multiple-Taper Spectral Domain Approach

MICHAEL E. MANN AND JEFFREY PARK

1. Introduction	1
1.1 Motivation and Overview	1
1.2 Signal and Noise in Climate Data: Dynamical Mechanisms	3
2. Traditional Methods of Oscillatory Climate Signal Detection	6
2.1 Signal and Noise Assumptions: A Synthetic Data Set	7
2.2 Conventional Approaches to Signal Detection	17
3. MTM-SVD Multivariate Frequency-Domain Climate Signal Detection and Reconstruction	30
3.1 Signal Detection	31
3.2 Signal Reconstruction	34
3.3 Testing the Null Hypothesis: Significance Estimation	36
3.4 Application to Synthetic Data Set	41
3.5 Effects of Sampling Inhomogeneities	45
4. Applications of MTM-SVD Approach to Observational and Model Climate Data	49
4.1 Global Temperature Data	51
4.2 Northern Hemisphere Joint Surface Temperature and Sea-Level Pressure Data	72
4.3 Long-Term Multiproxy Temperature Data	101
4.4 Seasonal Cycle: Observations vs CO ₂ -Forced Model Simulations . .	111
5. Conclusion	121
Acknowledgments	122
References	123

Numerical Models of Crustal Deformation in Seismic Zones

STEVEN C. COHEN

1. Introduction	133
1.1 Elastic Half-Space Model of the Earthquake Cycle for an Infinitely Long Strike-Slip Fault: An Illustrative Model	137

2. Coseismic Deformation	139
2.1 Elastic Dislocation Theory	139
2.2 Early Applications of Dislocation Theory	145
2.3 Extensions beyond the Uniform Elastic Half-Space Model	152
2.4 The Finite-Element Method	158
3. Time-Dependent Effects	162
3.1 Deep Fault Creep	162
3.2 Viscoelastic Flow	163
3.3 Kinematic Models of the Entire Earthquake Cycle	178
3.4 Other Issues	189
4. Crustal Deformation near Specific Faults	204
4.1 Nankai Subduction Zone, Japan	204
4.2 Eastern Aleutian Subduction Zone, Southcentral Alaska	210
4.3 San Andreas Transform Fault System, California	214
5. Epilogue	217
Acknowledgments	218
Appendix	218
References	222
INDEX	233
