

Contents

Preface	xi
Part I. Density Matrices and Density Functionals	
Three-body correlation effects in third-order reduced density matrices	3
<i>C. Valdemoro, L.M. Tel and E. Pérez-Romero</i>	
Part II. Electron Correlation Effects	
Many-particle Sturmians applied to molecules	19
<i>J. Avery and S. Sauer</i>	
Treatment of electron correlation in localized representation	41
<i>C. Kozmutza, E. Kapuy and L. Udvardi</i>	
Comparing (SC)²CAS-SDCI and externally corrected CCSD methods	73
<i>G. Peris, J.-P. Malrieu and J. Planelles</i>	
The size-consistent self-consistent SDCI method for excited states and ionization potentials	87
<i>J. Pitarch-Ruiz, J. Sánchez-Marín, I. Nebot-Gil, N. Ben Amor and D. Maynau</i>	
<i>Ab initio</i> summation over states/SCI for static and dynamic first hyperpolarizabilities of small molecules	101
<i>M. Spassova, V. Monev, I. Kanev, B. Champagne, D.H. Mosley and J.-M. André</i>	
Correlation energies for diatomic molecules: a re-evaluation of the empirical estimates for the N₂, CO, BF and NO⁺ systems	127
<i>H.M. Quiney, D. Moncrieff and S. Wilson</i>	
Influence of electron correlation on the electronic structure of superconducting Y-ceramics	143
<i>I.G. Kaplan, J. Hernández-Cóbos and J. Soullard</i>	

Part III. Relativistic Formulations

Energies and other properties of heavy atoms and molecules	161
<i>U. Kaldor and E. Eliav</i>	
Variational principle in the Dirac theory: theorems, examples and counter-examples	177
<i>J. Karwowski, G. Pestka and M. Stanke</i>	
Perspectives in relativistic Thomas-Fermi calculations for atomic systems	195
<i>I. Porras and A. Moya</i>	
Expectation values for ground-state atoms from a modified Thomas-Fermi-Dirac approach	215
<i>A. Moya and I. Porras</i>	
Correlated effective single-particle theory: relativistic optimized-potential method	227
<i>E. Engel and A. Facco-Bonetti</i>	
Ab-initio ZORA calculations	251
<i>S. Faas, J.G. Snijders and J.H. van Lenthe</i>	
Relativistic oscillator strengths for excited-state transitions in halogen atoms. Regularities	263
<i>C. Lavín, A.M. Velasco and I. Martín</i>	
Extension of the relativistic quantum defect orbital method to the treatment of many-valence electron atoms. Atomic transitions in Ar II	273
<i>I. Martín, A.M. Velasco and C. Lavín</i>	

Part IV. Valence Theory

Hyperspherical harmonics as atomic and molecular orbitals in momentum space	291
<i>V. Aquilanti, S. Cavalli, C. Coletti, D. Di Domenico and G. Grossi</i>	
An overview of the CASVB approach to modern valence bond calculations	303
<i>T. Thorsteinsson and D.L. Cooper</i>	
Modern valence-bond description of the mechanisms of six-electron pericyclic reactions	327
<i>P.B. Karadakov, D.L. Cooper, T. Thorsteinsson and J. Gerratt</i>	

Contents

A topological study of electron transfer and three-electron bond <i>X. Krokidis and A. Sevin</i>	345
BSSE-free MCSCF method for strong hydrogen bonds: investigation of H₂O-HCl and NH₃-HCl complexes <i>A. Famulari, M. Sironi and M. Raimondi</i>	361
 Part V. Nuclear Motion	
Non-adiabatic molecular Hamiltonian. Canonical transformation coupling electronic and vibrational motions <i>I. Hubač, P. Babineč, M. Polášek, J. Urban, P. Mach, J. Mášik and J. Leszczyński</i>	383
The effect of pseudopotential on the torsional energy levels of hydrogen peroxide and deuterium peroxide <i>M.L. Senent and Y.G. Smeyers</i>	401
Contents of Volume 2	415
Combined Index to Volumes 1 and 2	419
