

Volume 2

Glossary of Abbreviations	xv
Preface and Introduction	xvii
Preface	xvii
Introduction	xx
Incompressible Flow	xxii
The Finite Element Method	xxv
Incompressible Flow and the Finite Element Method	xxvi
Overview of this Volume	xxx
Some Subjective Discussion	xxxv
Why Finite Elements? Why Not Finite Volumes?	xxxvi

3 The Navier–Stokes Equations	447
3.1 Notational Introduction	447
3.2 The Continuum Equations (The PDE's)	450
3.3 Alternate Forms of the Viscous Term	452
3.3.1 Stress-Divergence Form	453
3.3.2 Div-Curl Form	453
3.3.3 Curl Form	454
3.4 Alternate Forms of the Non-Linear Term	454
3.4.1 Divergence Form	454
3.4.2 Rotational Form	454
3.4.3 Skew-Symmetric Form	455
3.4.4 A Symmetric Form	455
3.5 Derived Equations	457
3.5.1 The Pressure Poisson Equation (PPE)	457
3.5.2 The Vorticity Transport Equation (VTE)	458
3.5.3 The Penalized Momentum Equation	459
3.6 Alternate Statements of the NS Equations	461
3.6.1 Velocity-Pressure in Divergence Form	461
3.6.2 Velocity-Pressure in Rotational Form	461
3.6.3 PPE Form	461
3.6.4 The Stream Function-Vorticity ($\psi - \omega$) Formulation	462
3.6.5 The Velocity-Vorticity Formulation	462
3.6.6 Other Formulations	463
3.7 Special Cases of Interest	463
3.7.1 Stokes Flow	463
3.7.2 Inviscid Flow	466
3.7.3 Potential Flow	468
3.7.4 Axisymmetric Flow	469
3.8 Boundary Conditions	470
3.8.1 u - P Equations	471
a. Traction	471
b. Mixed	472
c. Total momentum flux	473
d. Symmetry	473
e. Robin	474
f. OBC's	475
g. More OBC's	480

	h. Penalty method OBC's	481
	i. Ill-posed OBC's	481
3.8.2	The Pressure Poisson Equation and Pressure Boundary Conditions	482
3.8.3	The Vorticity Transport Equation and Boundary Conditions on the Vorticity	485
	a. The 2D stream function-vorticity formulation	485
	b. The 3D velocity-vorticity formulation	487
3.9	Initial Conditions (and Well-Posedness)	487
3.9.1	The u - P Formulation	487
3.9.2	The PPE Formulation	490
3.9.3	Vorticity-Based Methods	491
3.10	Interim Summary	493
3.10.1	A Well-Posed IBVP for Incompressible Flow, and the Equivalence 'Theorem'	493
3.10.2	Some Ill-Posed Problems	496
3.10.3	The Simplified PPE is also Ill-Posed	497
3.10.4	Fixing the SPPE, and the PPE Paradox	499
3.10.5	PPE Solutions that are not NSE Solutions	500
3.10.6	A Remark on the Penalty Method	502
3.10.7	Key Features of Incompressible Flow	502
3.11	Global Conservation Laws	502
3.11.1	Conservation of Mass	503
3.11.2	Momentum Conservation	503
3.11.3	Kinetic Energy Conservation	503
3.11.4	Vorticity Conservation	505
3.11.5	Enstrophy Conservation	507
3.12	Weak Forms of the PDE's/Natural Boundary Conditions (NBC's)	508
3.12.1	The Conventional u - P Formulation and the Stress-Divergence Form Combined	508
3.12.2	Other u - P Formulations	516
	a. Full divergence form	516
	b. Skew-symmetric form	517
	c. Rotational form and other curl forms	517
	d. Other recent formulations	520
	e. Divergence-free basis functions	521
3.12.3	Pressure Poisson Equation Formulations	522
3.12.4	The Stream Function-Vorticity Formulation	523
3.12.5	Some Ill-posed Formulations	525
3.13	The Finite Element Equations/Discretization of the Weak Form	528
3.13.1	Detailed derivation of one u - P formulation	529
	a. Continuum formulation	529
	b. GFEM equations	530
	c. Matrix-vector representation	534
	d. Ill-posed equations	539
	e. Normal and tangential BC's	540
	f. Axisymmetric case	545
	g. Fixing ill-posed Dirichlet BC's	546
3.13.2	The Choice of Elements	547
	a. Introduction and summary tables	547
	*b. Null spaces and their effects; pressure modes	559
	*c. LBB-stability/div-stability	593

	d. Bringing LBB to the rest of the people	600
	e. Penalty methods	613
	f. Some 2D vs 3D considerations	623
3.13.3	Stabilization [D. J. Silvester]	623
	a. Stable vs. stabilized methods	624
	b. Equal order interpolation via stabilization	625
	c. Stabilized approximations using discontinuous pressure	631
	d. Impact on iterative solvers	636
	e. Recommendations	639
3.13.4	The Discrete Pressure Poisson Equations (PPE's)	640
	a. The consistent PPE	640
	b. Some inconsistent (approximate) PPE's	642
3.13.5	Additional Detailed Discussion of the Slightly UNSTABLE but Highly USABLE $Q_1 Q_0$ Element	644
	a. Introduction	644
	b. General problem statement	644
	c. Interior momentum equation	647
	d. Interior PPE	651
	e. Boundary momentum equations/ NBC's	654
	f. The PPE at boundaries	660
	g. Flow past a flat plate	671
	h. Flow past a corner	673
	i. $\text{Div } \mathbf{u} = 0$ as a PPE BC	676
	j. $Q_1 Q_0$ convergence proof	677
	k. Quantitative description of some unstable modes	686
	l. The boundary vector, g	691
3.13.6	Higher-Order Elements	694
	a. $Q_2 Q_1$	695
	b. $Q_2 Q_{-1}$	697
	c. $Q_2 P_{-1}$	698
3.13.7	Divergence-Free Elements (and Methods)	699
3.13.8	Conservation Laws Revisited	704
3.13.9	Periodic Boundary Conditions	707
3.14	A Control Volume Finite Element Method	712
*3.15	Variational Principles for Potential and Stokes Flow	716
	3.15.1 Introduction	716
	3.15.2 Discrete Stokes	717
	3.15.3 Discrete Potential	721
	3.15.4 Continuous Potential	722
	3.15.5 Continuous Stokes	726
3.16	Solution Methods for the Semi-Discretized Time-Dependent (and Steady) Equations	729
	3.16.1 Some Time-Integration Methods for the DAE's	733
	a. Primitive equations/index 2	735
	b. PPE methods/index 1	741
	c. Error analysis for index 1 and 2	745
	d. Some numerical results (Taylor vortex)	750

*3.16.2	A Model DAE Problem	767
	a. Introduction	767
	b. Index 2	768
	c. Index 1	775
	d. Index 0	777
	e. Penalty	777
	f. Energetics	781
	g. Numerical integration (analytical)	782
	h. Final exercise	790
*3.16.3	Analytical Solution of the Stokes Equations	791
	a. Introduction	791
	b. Index 2	791
	c. Index 1	794
	d. Linear stability theory	796
3.16.4	Three Variable-Step Implicit (Index 2) Methods— and Some Steady-State Methods	797
	a. Introduction	797
	b. Trapezoid rule	797
	c. Backward Euler (BDF1)	803
	d. BDF2	805
	e. Discussion	807
	f. Penalty method	808
3.16.5	An Explicit (Index 1) Method, Plus a Few Tricks	812
3.16.6	Semi-Implicit Projection Methods	824
	a. Introduction	824
	b. Derivation of an ‘optimal’ projection method, simplifications thereto, and analysis thereof	826
	c. A GFEM (almost) implementation of the second-order projection method— projection 2	849
	d. A sampling of projection methods used by others	860
3.16.7	Fully-Implicit Segregated Solution Methods— Transient and Steady-State	863
3.16.8	A Fractional-Step (Index 2) Method	868
3.16.9	Other Methods (Used by Others)	872
	a. Methods based on trajectories/characteristics	872
	b. Methods based on least squares (LSFEM)	873
	c. Methods based on Galerkin least squares	875
3.16.10	A Strategy for Hastening Steady Solutions	875
3.17	Aliasing and Aliasing Instability, Linear and Non-Linear	876
*3.18	A New Look at Two Old Finite Difference Methods	880
3.19	Numerical Example— Impulsive Start	884
	3.19.1 Introduction	884
	3.19.2 Domain, Mesh, BC’s, IC’s	886
	3.19.3 Two Steady-state Results ($\nu = 0, \infty$)	887
	3.19.4 Pressure Impulse	895

3.19.5	Minimum Time of Believability; $Re = 1000$ Results	896
3.19.6	Transient Stokes Flow	899
3.19.7	Divergence for $h \rightarrow 0$	905
3.19.8	A Better Model	911
3.19.9	Drag Coefficients	912
3.19.10	A New Analytical Model	916
3.19.11	A Better Mesh	923
3.19.12	Δt vs. t	928
3.19.13	A Deficient Mesh Design	930
3.19.14	Concluding Remarks	932
3.20	Closure: Some Additional Remarks on the Pressure	934
4	Derived Quantities	937
4.1	Introduction	937
4.2	Two Dimensions	938
4.2.1	Smoothing in General	938
4.2.2	Vorticity	939
4.2.3	Stream Function	941
4.2.4	Heat Flux	943
4.2.5	Forces and Moments	949
4.2.6	A Recommended Method for Computing First Derivatives at Nodes	952
4.2.7	Particle Paths	955
4.2.8	Effective Peclet (Reynolds) Number	957
4.2.9	Pressure Smoothing and Node Moving for $Q_1 Q_0$	958
4.3	Three Dimensions	961
4.3.1	Vorticity	961
4.3.2	Helicity Density	961
Appendix 4	Some More Element Matrices	963
A.4.1	Navier–Stokes; Additional Matrices	963
A.4.1.1	Gradient Matrix	963
A.4.1.2	Divergence Matrix	964
A.4.1.3	Consistent Laplacian Matrix for $Q_2 Q_1$ and Lumped Mass	965
Appendix 5	Vector Projections, Orthogonal and Not — and Projection Methods	967
A.5.1	Introduction	967
A.5.2	The \mathcal{P}_{J_0} -Projection	967
A.5.3	The $\mathcal{P}_{J_0}^h$ -Projection	973
A.5.4	The \mathcal{P}_{J_1} -Projection	978
A.5.5	The $\mathcal{P}_{J_1}^h$ -Projection	982

A.5.6 Sequential Projections	984
A.5.7 The Projection Method	985
A.5.8 Ranking Elements via Projections	987
References	989
Author Index	Ai-1
Subject Index	Si-1
