

## Acknowledgments

In Volume 1, Part 1, we have already acknowledged most of the personal sources of support for this extensive work. In this final volume, we would like to acknowledge the unfailing assistance of the curator and staff of *The Jagdish Mehra Collection* at the University of Houston, Houston, Texas, and the staff of the library of the *Max Planck-Institut für Physik* in Munich, Germany, especially Mrs. Frieda Ohrmund. Mrs. Norma Cowley of the Space Physics and Astronomy Department at Rice University, Houston, Texas, undertook the daunting task of typing the manuscript of Volume 6, and she completed it with her usual grace and cheerfulness; we are very grateful for her devoted help.

J. M. would like to thank the Curatorium of the *Minna-James-Heineman-Stiftung* of Essen (Bredene), Germany, for grants in support of research and writing this volume. His gratitude and thanks are also extended to the *Alexander von Humboldt-Stiftung* of Bonn, Germany, for a reinvitation to spend three months in Munich in 1997, and to the John D. and Catherine T. MacArthur Foundation of Chicago, Illinois, for a grant for research on this volume.

H. R. thanks Karl von Meyenn for numerous illuminating discussions regarding Wolfgang Pauli's role and personality in the whole history of quantum theory. We are both indebted to Manuel Doncel for a critical reading of the manuscript of the first two chapters, and similarly to Laurie Brown concerning discussions of the developments in the 1930s and for a critical reading of the manuscript of Chapter IV.

Finally, we would like to express our unfailing gratitude to our wives (Marlis Mehra and Martha Rechenberg) for putting up with us, and even encouraging us, in our constant involvement in the research and writing of this extensive work. Thanks.

Sugar Land, Texas, USA  
Munich, Germany

## Contents—Part 1

<b>Preface</b>	vii
<b>Acknowledgments</b>	ix
<b>Prologue</b>	xvii
1. The Rise of Quantum Physics (1900–1913)	xix
2. The Triumph and Decline of the Bohr–Sommerfeld Atomic Theory (1913–1925)	xxii
3. The Emergence of Quantum and Wave Mechanics (1923–1926)	xxv
4. The Conceptual Problems of the New Atomic Theory	xxxi
5. Outline of the Developments Completing and Extending Quantum Mechanics (1926–1942)	xxxiv
<b><i>Part 1 The Probability Interpretation and the Statistical Transformation Theory, the Physical Interpretation, and the Empirical and Mathematical Foundations of Quantum Mechanics (1926–1932)</i></b>	<b>1</b>
<b>Chapter I The Probability Interpretation and the Statistical Transformation Theory</b>	<b>3</b>
Introduction	3
I.1 Probability in Classical and Quantum Physics until 1925	10
I.2 Early Quantum-Mechanical Transformation Theory and the Wentzel–Kramers–Brillouin Method	20
I.3 Max Born’s Probability Interpretation of Schrödinger’s Wave Function	36
(a) Born’s Conceptual Approach to the Quantum Problem (up to Spring 1926)	38
(b) Wave Mechanics and Schrödinger’s Attacks on Göttingen Quantum Mechanics (Spring 1926)	41
(c) Quantum-Mechanical Scattering Phenomena (Summer 1926 to Fall 1926)	44
(d) The Physical Interpretation of Quantum Mechanics and Adiabatic Invariance (August–October 1926, with a Later Addendum)	48
(e) Born’s School of Quantum Mechanics (1926–1933)	52

I.4	Pascual Jordan's 'New Foundation' of Quantum Mechanics	55
I.5	The Transformation Theory of Paul Dirac	72
<b>Chapter II Uncertainty, Complementarity, and Quantum Fields</b>		90
Introduction		90
II.1	Dialogues on the Concepts of Atomic and Quantum Theory (1913–1926)	97
	(a) Stationary States, Emission and Absorption of Atomic Radiation, and the Light-Quantum (1913–1922)	99
	(b) The Weyl–Eddington and the Pauli–Weyl–Eddington Dialogues on the Unified Theory of Matter (1918–1923)	102
	(c) The Planck–Ehrenfest–Schrödinger–Einstein Dialogue on Identical Particles in Quantum Theory (1919–1925)	107
	(d) The Bohr–Pauli–Einstein Dialogue on the Fundamental Problems of Atomic Structure and Radiation Theory (1922–1926)	107
II.2	The Copenhagen Atmosphere (1926)	114
II.3	Mechanical Concepts, Observation, and Restriction: The Origin of the Uncertainty Relations	130
	(a) Heisenberg's Embarking Upon Philosophical Questions (1925–1926)	130
	(b) Wave Mechanics: A Mathematical Tool or Superior Physical Theory? (June–October 1926)	135
	(c) The Quantum Phenomena in Matrix Formulation (July–November 1926)	142
	(d) The Bohr–Klein Attitude Toward Wave Mechanics (Fall 1926)	144
	(e) The Heisenberg–Pauli Exchange on Collision and Related Problems (October–November 1926)	145
	(f) Heisenberg's Exchange with Dirac on the Transformation Theory (October–December 1926)	148
	(g) The Bohr–Heisenberg Discussion in Winter 1926/27	151
	(h) The $\gamma$ -ray Microscope: The Breakthrough to the Uncertainty Relations (February 1927)	153
	(i) The Uncertainty Relations and the 'Intuitive Content' of Quantum Mechanics (March 1927)	157
II.4	Complementarity	163
	(a) Introduction to the Background of Complementarity	163
	(b) The Philosophical Influences on Niels Bohr	166
	(c) The Need for a New Principle in Quantum Theory (Summer 1925–October 1926)	169
	(d) Oskar Klein and the Advantages of the Undulatory Theory (April 1926–February 1927)	174
	(e) Bohr's Response to the Uncertainty Relations and the Subsequent Debate with Heisenberg (March–June 1927)	181
	(f) Bohr's Preparation for the First Presentation of the Complementarity Principle at the Como Conference (April–September 1927)	186
	(g) The Como Lecture and Its Publication (September–October 1927)	192

II.5	The Origin of Quantum Field Theory	199
	(a) Introduction	199
	(b) The Quantum-Theoretical Reformulation of the Radiation Field (September 1925–November 1926)	200
	(c) Dirac's Quantum Theory of Emission and Absorption of Radiation (December 1926–April 1927)	205
	(d) The Quantization of de Broglie Waves (February–August 1927)	210
	(e) Intermezzo on the Charge-Free Relativistic Quantum Electrodynamics (March–December 1927)	218
	(f) The Quantization of (Nonrelativistic) Bose and Fermi Fields with Interaction (September 1927–January 1928)	223
II.6	The Solvay Conferences of 1927 and 1930 and the Consistency Debate	232
	(a) Introduction	232
	(b) Light-Quanta, Wave Fields, and Particles: Einstein's Preparation for the Fifth Solvay Conference (Spring 1926–Fall 1927)	233
	(c) The 1927 Solvay Reports and Their Preparation (Summer 1927)	241
	(d) The Official (Published) Discussions of Reports (October 1927)	246
	(e) The Bohr–Einstein Debate in October 1927—Earlier and Later Recollections	250
	(f) The Formulation Given to the Complementarity Principle	256
	(g) Bohr's New Philosophical, Physical, and Biological Insights (1928–1929)	260
	(h) Opposition from Berlin and the Sixth Solvay Conference (1928–1930)	266
II.7	Relativistic Electrons and Quantum Fields	271
	(a) Introduction	271
	(b) Are Elementary Particles Impenetrable? (September 1926–January 1927)	274
	(c) The Electron Wave Equation in Quantum Mechanics: Vector or Spinor? (December 1926–May 1927)	280
	(d) Dirac's Magnetic Electron Equation (January 1927–January 1928)	287
	(e) The Successes of the Relativistic Electron Theory and the Negative Energy Paradox (February–December 1928)	299
	(f) The Foundation of Relativistic Quantum Mechanics (Fall 1927–March 1929)	312
	(g) The 'Copenhagen Spirit' and Its Interpretation (1928–1930)	326
<b>Chapter III</b>	<b>The Empirical and Mathematical Foundations of Quantum Mechanics</b>	337
	Introduction	337
III.1	The Empirical Verification of Quantum Concepts	342
	(a) The Discrete Energy States and the Auger–Meitner Effect (1923–1925)	344
	(b) The Experimental Proof of Negative Dispersion (1926–1931)	348
	(c) The Discovery of the Raman Effect (February–March 1928)	353
	(d) The Exploration of the Raman Effect and the Independent Russian Discovery (1928–1930)	362

	(e) The Discovery of Matter Waves (1927–1931)	371
	(f) The Theory of the Ramsauer Effect and Further Quantum Phenomena (1928–1931)	380
III.2	The Mathematical Foundations of Quantum Mechanics	384
	(a) The Mathematics of the Pioneers of Quantum Mechanics	385
	(b) David Hilbert’s Axiomatic Foundations of Physics	392
	(c) John von Neumann and the Elaboration of Hilbert’s Lectures (1927)	401
	(d) Von Neumann’s Mathematical Foundation of Quantum Mechanics (1927–1929)	411
	(e) Aurel Wintner and the Spectral Theory of Infinite Matrices (1925–1928)	417
	(f) The First Response of the Physicists and Later of the Mathematicians	425
III.3	Quantum-Mechanical Statistics and the Theory of Measurement	430
	(a) The Probability-Theoretical Formulation of Quantum Mechanics (1927–1928)	431
	(b) The Thermodynamics of Quantum-Statistical Ensembles (1927)	439
	(c) The Ergodic Hypothesis and the H-Theorem in Quantum Mechanics (1927–1929)	445
	(d) The Reception of von Neumann’s Work on Quantum-Statistical Mechanics (1929–1930)	456
	(e) The Mathematical Foundations of the Theory of Measurement in Quantum Mechanics (1929–1932)	462
III.4	Group Theory and Quantum Mechanics	472
	(a) Symmetries, Group Theory, and Classical Physics (1830–1918)	473
	(b) Hermann Weyl: Group Theory and Natural Philosophy (1922–1928)	478
	(c) Werner Heisenberg and Eugene Wigner: The Pioneers of Group Theory in Quantum Mechanics (1926–1928)	488
	(d) Group Theory for Molecules and John Slater’s Battle Against the ‘ <i>Gruppenpest</i> ’ (1927–1929)	499
	(e) The Group Theorists Fight Back: Further Applications and Extensions (1929–1933)	509
III.5	From Molecular Theory to Quantum Chemistry	521
	(a) The Chemical and the Physical Electron (1800–1925)	522
	(b) Friedrich Hund and the Quantum Theory of Molecules (1925–1927)	527
	(c) The Heitler–London Theory of the Covalent Bond (1927–1928)	540
	(d) The Foundation of Quantum Chemistry (1928–1932)	552
	(e) Slater and Pauling’s Generalization of the Heitler–London Method and Mulliken’s Final Formulation of Molecular Orbitals	563
III.6	The Metal Electrons and Solid-State Theory	572
	(a) Introduction: The Prequantum-Mechanical Theory (1897–1926)	572
	(b) The Metal Electrons as a Free Fermi Gas (1926–1928)	577
	(c) Atomic Lattices in Leipzig: Heisenberg’s Ferromagnetism and Bloch’s Electrical Conductivity (1928)	593

(d) Band Theory of Solids and More on Magnetism in Munich, Leipzig, Zurich, and Elsewhere (1928–1932)	607
(e) Conclusion: An Unsolved Problem (1928–1932)	629
III.7 Aspects of Nuclear and ‘High-Energy’ Phenomena	632
(a) Introduction: The Experimental Facts (1908–1929)	632
(b) The Wave-Mechanical Theory of $\alpha$ -Decay and the $\alpha$ -Particle Model of Atomic Nuclei (1928–1930)	639
(c) The Difficulties with Electrons in Nuclei (1928–1932)	648
(d) Nuclear Particle Scattering at Low and High Energies (1928–1932)	658

***Part 2 The Completion and Extensions of Quantum Mechanics (1932–1941)***

**Chapter IV The Conceptual Completion and the Extensions of Quantum Mechanics**

**Epilogue: Aspects of the Development of Quantum Theory (1942–1999)**
