

# Contents

<b>1. Introduction . . . . .</b>	<b>1</b>
1.1 Atomic Cavity QED . . . . .	1
1.1.1 Emission in Free Space . . . . .	1
1.1.2 Spontaneous Emission in a Cavity . . . . .	2
1.1.3 Rabi Oscillations . . . . .	3
1.1.4 One-Atom Masers/Lasers . . . . .	4
1.2 Excitons . . . . .	5
1.2.1 Excitons Versus Electron–Hole Pairs . . . . .	5
1.2.2 Excitonic Oscillator Strength . . . . .	7
1.2.3 Bulk Exciton Polaritons . . . . .	9
1.2.4 Quantum Well Excitons . . . . .	11
1.3 Semiconductor Microcavities . . . . .	14
1.3.1 Microcavity Geometries . . . . .	14
1.3.2 Bragg Mirrors . . . . .	14
1.3.3 Planar DBR Microcavities . . . . .	19
1.3.4 Exciton–Photon Coupling . . . . .	22
<b>2. Microcavity Exciton Polaritons . . . . .</b>	<b>25</b>
2.1 Strong Coupling – Theory . . . . .	25
2.1.1 Semiclassical Theory . . . . .	26
2.1.2 Quantum Theory . . . . .	28
2.2 Strong Coupling – Experiment . . . . .	32
2.2.1 Microcavity Exciton Polariton Splitting and Oscillation	32
2.2.2 Collapse and Revival of Exciton Polariton Oscillation .	33
2.3 Effect of Inhomogeneous Broadening . . . . .	38
2.3.1 Exciton Polariton Ladder . . . . .	38
2.3.2 Motional Narrowing . . . . .	41
2.4 Effect of Electric and Magnetic Fields . . . . .	43
2.5 Transition from Strong to Weak Coupling . . . . .	43
<b>3. Biexcitonic Effects in Microcavities . . . . .</b>	<b>49</b>
3.1 Excitons Versus Two-Level Atoms . . . . .	49
3.2 Exciton–Exciton Interaction . . . . .	52
3.3 Biexcitonic Effects . . . . .	54

<b>4. Resonant Tunneling into Exciton and Polariton States . . . . .</b>	59
4.1 Resonant Tunneling into QW Exciton States – Theory . . . . .	59
4.1.1 Hole-Assisted Resonant Tunneling of Electrons into QW Exciton States . . . . .	59
4.1.2 Conventional Resonant Tunneling of Electrons . . . . .	62
4.1.3 Exciton Formation by Hole-Assisted Resonant Tunneling of Electrons . . . . .	63
4.1.4 Selective Creation of Excitons by Tunneling . . . . .	68
4.2 Resonant Tunneling into QW Exciton States – Experiment . .	70
4.2.1 $I$ – $V$ Measurement . . . . .	70
4.2.2 $L$ – $I$ Measurement . . . . .	72
4.2.3 Tunneling Spectroscopy for QW Excitons . . . . .	76
4.3 Stimulated Resonant Tunneling . . . . .	77
4.3.1 Saturation of the Stimulated Current . . . . .	79
4.3.2 Saturation of the Spontaneous Tunneling Current . .	82
4.4 Resonant Tunneling into Microcavity Exciton Polariton States	84
<b>5. Competition Between Photon Lasing and Exciton Lasing . . . . .</b>	87
5.1 Bose–Einstein Condensation of Excitons . . . . .	87
5.2 Exciton Lasers (Bosers) . . . . .	88
5.3 Exciton Polariton Bosers . . . . .	91
5.4 Pump–Probe Experiments . . . . .	92
5.5 Effective-Mass Measurement . . . . .	94
<b>6. Polariton Dynamics in Photoluminescence . . . . .</b>	99
6.1 Introduction . . . . .	99
6.2 Kinetic Equations . . . . .	99
6.2.1 Radiative Recombination of Exciton Polaritons . . . . .	102
6.2.2 Polariton–Phonon Scattering . . . . .	102
6.2.3 Exciton–Exciton Scattering . . . . .	107
6.3 Integration of the Rate Equation: Results . . . . .	110
6.4 Interface Disorder and Bottleneck Dynamics . . . . .	113
6.5 Stimulated Scattering of Lower Polaritons: Theory . . . . .	115
6.6 Stimulated Scattering of Lower Polaritons: Experiment . . . . .	120
6.7 Saturation . . . . .	125
<b>7. Stimulated Emission of Exciton Polaritons . . . . .</b>	127
7.1 Introduction . . . . .	127
7.2 Rate Equations and Threshold Behavior . . . . .	129
7.3 Langevin Equations and Noise Properties . . . . .	135
7.3.1 Polariton Squeezing . . . . .	138
7.3.2 Emission Linewidth . . . . .	140
7.4 Observation of Polariton Oscillation . . . . .	142
<b>References . . . . .</b>	145
<b>Index . . . . .</b>	153
