CONTRIBUTORS	vii
PREFACE	xi

Physics of Organic Electronic Devices

I. H. CAMPBELL AND D. L. SMITH

I. Introduction	1
II. Electronic Properties of π -Conjugated Organic Materials	12
III. Metal/Organic Interface Electronic Structure	24
IV. Electrical Transport Properties	54
V. Organic Diodes and Field-Effect Transistors	77
VI. Summary and Future Directions	113
Acknowledgements	117

Charge Density Wave Formation in Nanocrystals

PHILIP KIM, JIAN ZHANG, AND CHARLES M. LIEBER

I. Introduction	120
II. Charge Density Waves in Bulk Transition Metal Dichalcogenides	126
III. Creation of CDW Nanocrystals by STM Tip	132
IV. Finite Size Effect and Fermi Surface Roughening	142
V. Nanocrystal Fabrication to Other TMD Systems	148
VI. Summary and Future Work	156
Acknowledgments	157

Vibrational Properties of Shape-Memory Alloys

ANTONI PLANES AND LLUÍS MAÑOSA

I. Introduction	160
II. Martensitic Transitions and Shape-Memory Materials	162
III. Precursor Effects	175
IV. Lattice Dynamics	181
V. Experimental Results	187
VI. Phase Stability	217
VII. Modelling	233
VIII. Magnetic Coupling	252
IX. Conclusions	265
Acknowledgments	267

Grain Growth and Evolution of Other Cellular Structures

CARL V. Thompson

I. Introduction	270
II. The Phenomenological Model of Burke and Turnbull	270
III. Grain Growth in Two Dimensions	272
IV. Mean Field Models for Grain Growth	279
V. Simulations	286
VI. Experiments on Two-Dimensional Systems	290
VII. Experiments on Foils and Thin Films	293
VIII. Three-Dimensional Systems	306
IX. Summary	313
X. Acknowledgements	314
Author Index	315
Subject Index	331
