PREFACE	xv
1. Micromagnetic Modeling of Domain Structures in Magnetic Thin Films by JIAN-GANG ZHU	
1.1. Introduction	1
1.2. Model and Computation	2
1.3. Comparisons of Simulated Domain Structures with Experimental Observations	8
1.4. Domain Configurations in Patterned Magnetic Thin Film Elements	15
1.5. Magnetization Processes in Thin Film Recording Media	18
1.6. Summary and Remarks	25
2. Lorentz Microscopy: Theoretical Basis and Image Simulations by MARC DE GRAEF	
2.1. Introduction	27
2.2. Basic Lorentz Microscopy (Classical Approach)	28
2.3. Quantum Mechanical Formulation	39
2.4. Magnetic Induction Mapping Methods	58
2.5. The Transport-of-Intensity Equation	61

3. Recent Advances in Magnetic Force Microscopy: Quantification and <i>in Situ</i> Field Measurements by ROMEL D. GOMEZ	
3.1. Introduction	69
3.2. Review of Magnetic Force Microscopy	70
3.3. Quantification Techniques: Models and Experiments	86
3.4. Advanced Techniques: Imaging in the Presence of an External Field	91
3.5. Applications	96
4. Electron Holography and Its Application to Magnetic Materials by M. R. McCARTNEY, R. E. DUNIN-BORKOWSKI, AND DAVID J. SMITH	
4.1. Introduction	111
4.2. Development of Electron Holography	112
4.3. The Technique of Off-Axis Electron Holography	113
4.4. Applications to Magnetic Materials	118
4.5. Prospects and Concluding Remarks	134
5. Phase Retrieval in Lorentz Microscopy by ANTON BARTY, DAVID PAGANIN, AND KEITH NUGENT	
5.1. Introduction	137
5.2. Phase Retrieval Theory	138
5.3. Practical Considerations in Electron Phase Microscopy ...	144
5.4. Application to Lorentz Microscopy	152
5.5. Critical Evaluation of the Technique	160
5.6. Summary and Conclusions	164

6. Scanning Electron Microscopy with Polarization Analysis (SEMPA) and Its Applications by JOHN UNGURIS	
6.1. Introduction	167
6.2. Spin Polarized Secondary Electron Magnetic Contrast	168
6.3. Instrumentation	171
6.4. Examples of SEMPA Applications	179
6.5. Conclusion	193
7. High Resolution Lorentz Scanning Transmission Electron Microscopy and Its Applications by YUSUKE YAJIMA	
7.1. Introduction	195
7.2. Principle	196
7.3. Instrument	213
7.4. Applications	214
7.5. Conclusions	225
8. Magnetic Structure and Magnetic Imaging of $\text{Re}_2\text{Fe}_{14}\text{B}$ (RE = Nd, Pr) Permanent Magnets by YIMEI ZHU AND VYACHESLAV VOLKOV	
8.1. Introduction	227
8.2. Microstructure	229
8.3. Grain Boundaries in Die-Upset Magnets	231
8.4. Domain Structure	236
8.5. Effects of Stray Fields on Magnetic Imaging	249
8.6. <i>In Situ</i> Experiments	255
8.7. Structure and Properties Correlation	264
