

Contents

1. Fast Beams, Production and Detection	1
1.1 Charge Exchange	4
1.1.1 Ground-State Particles	6
1.1.2 Metastable Particles	13
1.1.3 Rydberg Atoms	17
1.2 Neutralization of Negative Ions by Electron Detachment	18
1.2.1 Photodetachment	18
1.2.2 Collisional Detachment	21
1.2.3 Autodetachment	21
1.3 Neutralization of Ions by Collisions with Metal Surfaces	22
1.4 Aerodynamic Acceleration	24
1.5 Plasma and Gas Discharge Sources	29
1.5.1 Arc-Heated Jet Sources	29
1.5.2 Radiofrequency Discharges	34
1.5.3 Laser-Sustained Plasmas	34
1.5.4 Hollow Cathode Discharges	37
1.5.5 Corona Discharges	37
1.5.6 Glow Discharges	37
1.6 Laser Ablation	39
1.7 Sputtering	42
1.8 Photolysis	48
1.8.1 Beam Experiments	48
1.8.2 Gas-Phase Measurements	49
1.8.3 Oriented Reactants	49
1.9 Electron-Stimulated Desorption	50
1.10 Other Methods	51
1.10.1 Mechanical Acceleration	51
1.10.2 Shock Waves	52
1.10.3 Recoil Nuclei of Radioactive Decays	52
1.11 Some Examples of Fast Beam Applications	53
1.11.1 Coaxial Laser Spectroscopy with Fast Beams	53
1.11.2 Photofragment Translational Spectroscopy	56
1.11.3 Precision Measurements of Lifetimes	57
1.11.4 Merged Beams	59

1.11.5 Injection of Fast Beams into Fusion Plasmas	62
1.11.6 Fast Beam Methods for Plasma Diagnostics	63
1.12 Fast Beam Detection	65
1.12.1 Surface Ionization (Langmuir-Taylor Detector)	65
1.12.2 Bolometer and Pyroelectric Detectors	67
1.12.3 Laser-Induced Fluorescence	68
1.12.4 Secondary Electron Emission	68
1.12.5 Collision-Induced Fluorescence	69
2. Production and Diagnostics of Cluster Beams	71
2.1 Survey of Methods for Cluster Formation	75
2.2 Supersonic Jets	77
2.2.1 Influence of Nozzle Shape	78
2.2.2 Influence of Carrier Gases	80
2.2.3 Technical Realization of Cluster Sources	81
2.3 Gas Aggregation	82
2.4 Surface Erosion	85
2.4.1 Sputtering	86
2.4.2 Laser Ablation	87
2.4.3 Pulsed Arc Discharges	89
2.4.4 Liquid Metal Ion Sources (LMIS)	91
2.5 Laser-Induced Pyrolysis	92
2.5.1 Multiphoton Infrared Dissociation and Photosensitization	93
2.5.2 Source Design and Applications	95
2.6 Doping of Clusters and Production of Mixed Clusters	96
2.6.1 Formation of Mixed Clusters by Coexpansion	97
2.6.2 Gas Aggregation	97
2.6.3 Particle Capture (“Pick-up” Sources)	97
2.6.4 Cluster Aggregation	99
2.6.5 Laser Ablation	100
2.6.6 Pulsed Arc Discharges	101
2.7 Generation of Excited Clusters	101
2.8 Determination of Size Distributions in Cluster Beams	102
2.8.1 Electron Diffraction	102
2.8.2 Light Scattering	105
2.8.3 Gas Scattering	107
2.8.4 Atom Diffraction	120
2.8.5 Mass Spectrometric Methods	122
2.8.6 Other Methods	125
2.9 Some Cluster Applications	132
2.9.1 Cluster Beam Deposition	132
2.9.2 Cluster Impact Lithography	133
2.9.3 Examples of Experimental Results	134
2.9.4 Cluster Beams in High Energy Physics	136

3. Velocity Measurement and Selection	137
3.1 Mechanical Selectors	138
3.1.1 Slotted Disk Velocity Selector (Fizeau Principle)	139
3.1.2 Calibration	150
3.1.3 Special Designs	152
3.1.4 Slotted Cylinder Velocity Selector	153
3.1.5 Other Designs	154
3.2 Time-of-Flight Methods	156
3.2.1 Resolution and Methods of Deconvolution	157
3.2.2 Cross-Correlation Method	161
3.2.3 Experimental Details	164
3.2.4 Calibration	169
3.3 Doppler Shift Measurements	171
3.3.1 Experimental Technique and Resolution	172
3.3.2 Measurements of Differential Scattering Cross Sections	175
3.4 Deflection in Inhomogeneous Magnetic Fields	177
3.4.1 Two-Wire Field	178
3.4.2 Magnetic Hexapole Fields	184
3.5 Deflection by Gravity	191
3.6 Determination of the de Broglie Wavelength	193
3.6.1 Diffraction from Crystal Surfaces	193
3.6.2 Diffraction from Transmission Gratings	195
3.7 Beam Deflection by Photon Recoil	195
4. State Selection	197
4.1 Potentials of Cylinder-Symmetric and Planar Fields	199
4.1.1 Monopole Field	200
4.1.2 Multipole Fields	201
4.1.3 Two-Dimensional, Periodic Fields	202
4.2 Deflection in Inhomogeneous Magnetic Fields	204
4.2.1 Effective Magnetic Dipole Moment of Atoms	204
4.2.2 Two-Wire Field (Rabi Field)	206
4.2.3 Quadrupole Sector Field	211
4.2.4 Two-Pole Field	213
4.2.5 Multipole Fields	213
4.3 Deflection in Inhomogeneous Electrostatic Fields	220
4.3.1 Effective Electric Dipole Moment of Molecules	221
4.3.2 Rabi and Two-Pole Fields	222
4.3.3 Electrostatic Multipole Fields	224
4.3.4 Other Fields	230
4.4 Magnetostatic and Electrostatic Traps	230
4.4.1 Three-Dimensional Quadrupole Fields	232
4.4.2 Ioffe Trap	233
4.5 Nonadiabatic (Majorana) Transitions	234

4.6 Technical Details	235
4.7 Applications of State Selection by Inhomogeneous Fields	240
4.7.1 Molecular Beam Magnetic and Electric Resonance Method	240
4.7.2 Cesium Frequency and Time Standard	242
4.7.3 Atomic and Molecular Collisions	244
4.7.4 Cluster Investigations	247
4.7.5 Atomic Polarizabilities	248
4.7.6 State Analysis	249
4.7.7 Gas–Surface Interaction	249
4.7.8 Miscellaneous Applications	250
4.8 Optical Methods for State Selection	251
4.8.1 Optical Pumping	252
4.8.2 Selective State Depopulation	252
4.8.3 Selective Population of an Atomic State	254
4.8.4 Selective Population of a Molecular State	255
4.8.5 Two-Photon Processes	257
4.8.6 Photodissociation	260
4.8.7 State Selection in Excited States	260
4.8.8 Stimulated Raman Adiabatic Passage (STIRAP)	263
5. Slow Atom Beams, Traps, and Atom Optics	267
5.1 Radiation Pressure Forces	268
5.1.1 Photon Recoil Force	269
5.1.2 Optical Dipole Force	271
5.1.3 Optical Beam Slowing by Photon Recoil	273
5.1.4 Atomic Beam Deflection by Photon Recoil	278
5.2 Trapping and Cooling of Atoms	282
5.2.1 Optical Molasses and Cooling Mechanisms	282
5.2.2 Atom Traps	284
5.2.3 Atom Traps as Sources for Slow and Cold Atoms	287
5.2.4 Methods of Beam Compression	289
5.3 Examples of Applications	291
5.3.1 Precision Spectroscopy and Frequency Standards	291
5.3.2 Atomic Collision Processes	292
5.3.3 Bose–Einstein Condensation	293
5.3.4 Photoassociative Spectroscopy	295
5.3.5 Atom Lithography	297
5.4 Atom Optics	298
5.4.1 Atom-Optical Elements	299
5.4.2 Lenses	300
5.4.3 Mirrors	303
5.4.4 Atom Waveguides	308
5.4.5 Diffraction Gratings	309
5.4.6 Prisms	315

5.5 Atom Interferometry	316
5.5.1 A Mach-Zehnder Interferometer	317
5.5.2 Some Experimental Results	318
References	323
Subject Index	369
Conversion Factors for Pressure and Energy Units	375
