

# Contents

<b>1. Introduction . . . . .</b>	<b>1</b>
1.1 Neutral Gases and Plasmas . . . . .	1
1.2 Plasmas in Space . . . . .	2
1.3 A Brief History of Space Research . . . . .	5
Exercises and Problems . . . . .	8
<b>2. Charged Particles in Electromagnetic Fields . . . . .</b>	<b>9</b>
2.1 Electromagnetic Fields . . . . .	9
2.1.1 Maxwell's Equations in Vacuum . . . . .	10
2.1.2 Transformation of Field Equations . . . . .	11
2.1.3 Generalized Ohm's Law . . . . .	12
2.1.4 Energy Equation of the Electromagnetic Field . . . . .	12
2.2 Particle Motion in Electromagnetic Fields . . . . .	14
2.2.1 Lorentz Force and Gyration . . . . .	14
2.3 Drifts of Particles in Electromagnetic Fields . . . . .	17
2.3.1 The Concept of the Guiding Center . . . . .	17
2.3.2 Crossed Magnetic and Electric Fields: $\mathbf{E} \times \mathbf{B}$ Drift . . . . .	18
2.3.3 Magnetic and Gravitational Fields . . . . .	19
2.3.4 Inhomogeneous Magnetic Fields . . . . .	20
2.3.5 Curvature Drift . . . . .	20
2.3.6 Drifts Combined with Changes in Particle Energy . . . . .	21
2.3.7 Drift Currents in Plasmas . . . . .	22
2.4 Adiabatic Invariants . . . . .	22
2.4.1 First Adiabatic Invariant: The Magnetic Moment . . . . .	23
2.4.2 Magnetic Mirrors and Bottles . . . . .	25
2.4.3 Second Adiabatic Invariant: Longitudinal Invariant . . . . .	27
2.4.4 Third Adiabatic Invariant: Flux Invariant . . . . .	29
2.5 Summary . . . . .	29
Exercises and Problems . . . . .	29
<b>3. Magnetohydrodynamics . . . . .</b>	<b>31</b>
3.1 From Hydrodynamics to Magnetohydrodynamics . . . . .	32
3.1.1 Partial and Convective Derivatives . . . . .	32
3.1.2 Equation of Motion or Momentum Balance . . . . .	33

3.1.3	Equation of Continuity . . . . .	38
3.1.4	Equation of State . . . . .	39
3.2	Basic Equations of MHD . . . . .	40
3.2.1	Two-Fluid Description . . . . .	41
3.3	Magnetohydrostatics . . . . .	42
3.3.1	Magnetic Pressure . . . . .	43
3.3.2	Magnetic Tension . . . . .	44
3.4	Magnetohydrokinematics . . . . .	47
3.4.1	Frozen-in Magnetic Fields . . . . .	47
3.4.2	Deformation and Dissipation of Fields . . . . .	49
3.5	Reconnection . . . . .	54
3.6	The Magnetohydrodynamic Dynamo . . . . .	56
3.7	Debye Shielding . . . . .	59
3.8	Summary . . . . .	62
	Exercises and Problems . . . . .	63
4.	<b>Plasma Waves</b> . . . . .	65
4.1	What is a Wave? . . . . .	66
4.2	Magnetohydrodynamic Waves . . . . .	67
4.2.1	Linearization of the Equations: Perturbation Theory . . . . .	67
4.2.2	Alfvén Waves . . . . .	69
4.2.3	Magneto-Sonic Waves . . . . .	70
4.3	Electrostatic Waves in Non-Magnetic Plasmas . . . . .	73
4.3.1	Plasma Oscillations . . . . .	73
4.3.2	Electron Plasma Waves (Langmuir Waves) . . . . .	75
4.3.3	Ion-Acoustic Waves (Ion Waves) . . . . .	76
4.4	Electrostatic Waves in Magnetized Plasmas . . . . .	77
4.4.1	Electron Oscillations Perpendicular to $\mathbf{B}$ (Upper Hybrid Frequency) . . . . .	77
4.4.2	Electrostatic Ion Waves Perpendicular to $\mathbf{B}$ (Ion Cyclotron Waves) . . . . .	78
4.4.3	Lower Hybrid Frequency . . . . .	78
4.5	Electromagnetic Waves in Non-Magnetized Plasmas . . . . .	79
4.6	Electromagnetic Waves in Magnetized Plasmas . . . . .	81
4.6.1	Electromagnetic Waves Perpendicular to $\mathbf{B}_0$ . . . . .	81
4.6.2	Waves Parallel to the Magnetic Field: Whistler (R-Waves) and L-Waves . . . . .	83
4.7	Summary . . . . .	85
	Exercises and Problems . . . . .	85
5.	<b>Kinetic Theory</b> . . . . .	87
5.1	The Distribution Function . . . . .	87
5.1.1	Phase Space and Distribution Function . . . . .	87
5.1.2	Maxwell's Velocity Distribution . . . . .	88
5.1.3	Other Distributions . . . . .	89

5.1.4	Distribution Function and Measured Quantities . . . . .	92
5.2	Basic Equations of Kinetic Theory . . . . .	92
5.2.1	The Boltzmann Equation . . . . .	92
5.2.2	The Vlasov Equation . . . . .	93
5.2.3	The Fokker–Planck Equation . . . . .	95
5.3	Collisions . . . . .	97
5.3.1	Collisions Between Neutrals . . . . .	97
5.3.2	Collisions Between Charged Particles . . . . .	99
5.4	Summary . . . . .	101
	Exercises and Problems . . . . .	101
6.	<b>Sun and Solar Wind:</b> <b>Plasmas in the Heliosphere</b> . . . . .	103
6.1	The Sun . . . . .	103
6.1.1	Nuclear Fusion . . . . .	105
6.1.2	Structure of the Sun . . . . .	106
6.1.3	The Solar Atmosphere . . . . .	107
6.1.4	The Coronal Magnetic Field . . . . .	108
6.2	The Solar Wind . . . . .	109
6.2.1	Properties . . . . .	110
6.2.2	Solar Wind Models . . . . .	111
6.2.3	Coronal Heating and Solar Wind Acceleration . . . . .	115
6.3	The Interplanetary Magnetic Field (IMF) . . . . .	116
6.3.1	Spiral Structure . . . . .	116
6.3.2	Sector Structure . . . . .	118
6.3.3	The Ballerina Model . . . . .	118
6.3.4	Corotating Interaction Regions . . . . .	120
6.4	Plasma Waves in Interplanetary Space . . . . .	121
6.4.1	Power-Density Spectrum . . . . .	122
6.4.2	Waves or Turbulence? . . . . .	123
6.5	The Three-Dimensional Heliosphere . . . . .	125
6.6	The Active Sun . . . . .	127
6.6.1	The Solar Cycle . . . . .	127
6.6.2	A Simple Model of the Solar Cycle . . . . .	128
6.6.3	The Heliosphere During the Solar Cycle . . . . .	130
6.7	Flares and Coronal Mass Ejections . . . . .	131
6.7.1	Electromagnetic Radiation . . . . .	131
6.7.2	Classes of Flares . . . . .	135
6.7.3	Coronal Mass Ejections . . . . .	136
6.7.4	Coronal Mass Ejections, Flares, and Coronal Shocks . . . . .	138
6.7.5	Models of Coronal Mass Ejections (CMEs) . . . . .	139
6.7.6	Models of Flares . . . . .	141
6.7.7	Magnetic Clouds: CMEs in Interplanetary Space . . . . .	143
6.7.8	Interplanetary Shocks . . . . .	144
6.8	Shock Waves . . . . .	146

6.8.1	Information, Dissipation, and Non-Linearity .....	147
6.8.2	The Shock's Rest Frame.....	148
6.8.3	Collisionless Shock Waves .....	149
6.8.4	Shock Conservation Laws.....	150
6.8.5	Jump Conditions and Discontinuities .....	152
6.8.6	Shock Geometry .....	153
6.8.7	Fast and Slow Shocks .....	154
6.8.8	The Coplanarity Theorem .....	156
6.8.9	The Shock Normal Direction .....	156
6.9	Summary.....	157
	Exercises and Problems .....	157
<b>7.</b>	<b>Energetic Particles in the Heliosphere .....</b>	<b>159</b>
7.1	Particle Populations in the Heliosphere .....	159
7.2	Solar Energetic Particles and Classes of Flares .....	162
7.3	Interplanetary Transport – Theoretical Background .....	166
7.3.1	Spatial Diffusion .....	166
7.3.2	Pitch Angle Diffusion .....	173
7.3.3	Diffusion in Momentum Space .....	175
7.3.4	Wave–Particle Interactions .....	175
7.3.5	Electromagnetic Waves.....	178
7.3.6	Transport Equations .....	179
7.4	Interplanetary Propagation – Observations .....	182
7.4.1	Fits with a Transport Equation .....	182
7.4.2	Analysis of Magnetic Field Fluctuations .....	183
7.4.3	Comparison Between Both Approaches .....	184
7.5	Particle Acceleration at Shocks – Theory .....	186
7.5.1	Shock Drift Acceleration (SDA) .....	186
7.5.2	Diffusive Shock Acceleration .....	189
7.5.3	Diffusive Shock Acceleration and Self-Generated Turbulence .....	192
7.5.4	Stochastic Acceleration .....	194
7.5.5	The Shock as a Non-Linear System .....	195
7.5.6	Summary Shock Acceleration .....	196
7.6	Particles at Shocks in Interplanetary Space .....	197
7.6.1	Low-Energy Particles (Tens of keV) at Traveling Shocks .....	198
7.6.2	High-Energetic Particles (MeVs) at Traveling Shocks ..	201
7.6.3	Particles at Planetary Bow Shocks .....	203
7.7	Galactic Cosmic Rays (GCRs) .....	205
7.7.1	Variations .....	205
7.7.2	Modulation Models .....	211
7.8	Summary .....	215
	Exercises and Problems .....	215

8.	The Terrestrial Magnetosphere . . . . .	217
8.1	The Geomagnetic Field . . . . .	218
8.1.1	Description of the Geomagnetic Field . . . . .	218
8.1.2	Variability of the Internal Field . . . . .	221
8.1.3	The Terrestrial Dynamo . . . . .	224
8.2	Topology of the Magnetosphere . . . . .	226
8.2.1	Overview . . . . .	226
8.2.2	The Magnetopause . . . . .	227
8.2.3	Polar Cusps . . . . .	230
8.2.4	The Tail and the Polar Caps . . . . .	230
8.2.5	Magnetosheath and Bow Shock . . . . .	232
8.3	Plasmas and Currents in the Magnetosphere . . . . .	234
8.3.1	The Atmosphere . . . . .	234
8.3.2	The Ionosphere . . . . .	236
8.3.3	Magnetosphere–Ionosphere Coupling . . . . .	240
8.3.4	The Plasmasphere . . . . .	243
8.3.5	The Geosphere . . . . .	245
8.3.6	The Outer Magnetosphere . . . . .	246
8.4	The Open Magnetosphere . . . . .	246
8.4.1	Convection of Plasma Into the Magnetosphere . . . . .	247
8.4.2	Flux Transfer Events . . . . .	250
8.4.3	Release of Accumulated Matter: Substorms . . . . .	251
8.5	Geomagnetic Disturbances . . . . .	253
8.5.1	Daily Variations . . . . .	253
8.5.2	Geomagnetic Indices . . . . .	253
8.5.3	Geomagnetic Pulsations . . . . .	254
8.5.4	Geomagnetic Storms . . . . .	255
8.5.5	Geomagnetic Activity on Longer Time Scales . . . . .	256
8.6	Aurorae . . . . .	259
8.6.1	Historical Excursion . . . . .	260
8.6.2	Beginning of the Scientific Analysis . . . . .	262
8.6.3	Modern Interpretation . . . . .	265
8.6.4	Electron Acceleration . . . . .	265
8.6.5	Excitation of the Atmosphere . . . . .	267
8.6.6	Shape and Local Time . . . . .	268
8.7	Energetic Particles in the Magnetosphere . . . . .	269
8.7.1	The Radiation Belts . . . . .	269
8.7.2	Galactic Cosmic Rays – Størmer Orbits . . . . .	279
8.7.3	Solar Energetic Particles – Polar Cap Absorption . . . . .	281
8.8	Magnetospheric Modeling . . . . .	282
8.9	Summary . . . . .	283
	Exercises and Problems . . . . .	284

<b>9. Planetary Magnetospheres</b>	285
9.1 The Planets	285
9.2 Planets with a Magnetic Field	286
9.2.1 Mercury	287
9.2.2 Jupiter	288
9.2.3 Saturn	290
9.2.4 Uranus	291
9.2.5 Neptune	293
9.3 Planets Without a Magnetic Field	294
9.4 Comparison of Planetary Magnetospheres	295
9.4.1 Structures of Planetary Magnetospheres	295
9.4.2 Sizes	296
9.4.3 Plasma Sources	297
9.4.4 Upstream of the Bow Shock: The Foreshocks	298
9.4.5 Radiation Belts	299
9.5 Summary	301
Exercises and Problems	302
<b>10. Solar–Terrestrial Relationships</b>	303
10.1 Solar–Terrestrial Relationships: Overview	303
10.2 Responses of the Upper Atmosphere to Solar Variability	305
10.2.1 Polar Cap Absorptions and Ozone	307
10.2.2 Thermospheric Circulation	309
10.3 The Solar Cycle, Sector Boundaries, Droughts, and Thunderstorms	311
10.3.1 Solar Activity, Climate, and Culture	312
10.3.2 Sun and Weather	314
10.3.3 Cosmic Rays, Clouds, and Solar Cycle Length	318
10.4 The Technical Environment and Solar Activity	318
<b>11. Instrumentation</b>	321
11.1 Field Instruments	321
11.1.1 The Magnetic Field	322
11.1.2 Electric Field Measurements	324
11.1.3 Wave Measurements	325
11.2 Plasma Instruments	326
11.2.1 Instruments for Dense Plasmas	326
11.2.2 Instruments for Rarefied Plasmas	328
11.2.3 Energetic Particle Instruments	329
11.3 Supplementary Ground-Based Observations	331

<b>Appendix</b>	333
A.1 List of Symbols	333
A.2 Useful Equations in the SI and cgs System	335
A.3 Useful Relations	337
A.3.1 Vector Calculus	337
A.3.2 Cylindrical Coordinates	338
A.3.3 Spherical Coordinates	338
A.4 Useful Numbers	339
A.4.1 Fundamental Constants	339
A.4.2 Numbers in Plasmas	339
