

TABLE OF CONTENTS

Preface	v
INVITED PAPERS	
Applications of high-brightness electron beams..... <i>M.J. van der Wiel</i>	3
RF photoinjector	17
<i>Patrick G. O'Shea</i>	
Computational modeling of high brightness electron beams physics . <i>L. Serafini</i>	27
Two experiments for the generation and preservation of high-brightness electron beams	52
<i>David H. Dowell, B.E.C. Koltenbah and C. Parazzoli</i>	
Beam halo formation in high intensity proton beams	72
<i>T.P. Wangler</i>	
Computational challenges in high intensity ion beam physics	91
<i>Robert D. Ryne, Ji Qiang and Salman Habib</i>	
Space charge effects in rings	112
<i>Martin Reiser</i>	
Crystalline beams	124
<i>Alessandro G. Ruggiero</i>	
Femtosecond electron and X-ray generation by laser and plasma-based sources	146
<i>E. Esarey and W.P. Leemans</i>	
Working Group 1 summary	167
<i>C. Chen and M. Ferrario</i>	
Envelope oscillations and halo formation in bunched beams: a perturbational approach	173
<i>C.K. Allen</i>	
Electron beam halo formation in high-power PPM focusing klystron amplifiers	193
<i>C. Chen and R. Parker</i>	

Matching of high-brightness electron and ion beams in variably focusing channels	207
<i>R. Pakter and C. Chen</i>	
A particle-core model for transverse dynamics of beam halo in periodic-focusing channels	222
<i>T.F. Wang</i>	
Variational-wavelet approach to rms envelope equations	235
<i>A. Fedorova and M. Zeitlin</i>	
Non-equilibrium transverse motion and emittance growth in space-charge dominated beams	255
<i>S.G. Anderson and J.B. Rosenzweig</i>	

COLLECTIVE WORKING GROUP II.
EFFECTS IN BENDING SYSTEMS

Working Group 2 summary: space charge effects in bending systems	289
<i>C.L. Bohn and P.J. Emma</i>	
Errors, resonances, and corrections in the space-charge-dominated beam of the University of Maryland Electron Ring (UMER)	297
<i>R.A. Kishek, M. Reiser, P. O'Shea, M. Venturini and W.W. Zhang</i>	
Formation of patterns in intense hadron beams. The amplitude equation approach	309
<i>S.I. Tzenov</i>	
A general method for propagation of the phase space distribution, with application to the saw-tooth instability	322
<i>R.L. Warnock and J.A. Ellison</i>	
Generation of intense X-rays and low-emittance electron beams in a laser-electron storage ring	349
<i>Z. Huang</i>	
Nonperturbative geometrodynamical calculation of chaotic mixing time in charged-particle beams	358
<i>C.L. Bohn</i>	
Progress on the study of CSR effects	369
<i>R. Li</i>	

WORKING GROUP III. EXOTIC SOURCE PHYSICS

Working Group 3 summary: Exotic source physics: photon-assisted field emission, spin polarization, cathode-less (plasma) sources, etc..	393
<i>C.A. Brau and W.B. Mori</i>	
Optimization of Smith-Purcell radiation from a perfectly conducting strip grating	399
<i>S.R. Trotz</i>	
Plasma electron trapping and acceleration in a plasma wake field using a density transition	404
<i>H. Suk, N. Barov, J.B. Rosenzweig and E. Esarey</i>	
Low-emittance monoenergetic electron and ion beams from ultra-intense laser-solid interactions	418
<i>T.E. Cowan, M. Roth, M.M. Allen, J. Johnson, S.P. Hatchett, G.P. Le Sage and S.C. Wilks</i>	
Single crystal copper photo and cathode in the BNL/SLAC/UCLA 1.6 cell RF gun	439
<i>D.T. Palmer, S. Anderson and J.B. Rosenzweig</i>	

WORKING GROUP IV. BEAM MEASUREMENTS AND TECHNOLOGY

Working Group 4 summary: beam measurements and photoinjector issues	447
<i>D.C. Nguyen and V. Yakimenko</i>	
Recent developments of the MIT 17 GHz RF gun experiment	454
<i>W.J. Brown, K.E. Kreischer, M.A. Shapiro, R.L. Temkin and X. Wan</i>	
Update on the commissioning of the low-energy demonstration accelerator (LEDA) radio-frequency quadrupole (RFQ)	466
<i>H.V. Smith, Jr., J.D. Gilpatrick, K.F. Johnson, W.P. Lysenko, P.M. McGehee, D.E. Rees, A.H. Regan, L.J. Rybarcyk, J.D. Schneider, M.E. Schulze, J.D. Sherman and L.M. Young</i>	
Multidimensional phase space recovery using tomography technique	480
<i>M. Babzien, I. Ben-Zvi, R. Malone, X.J. Wang and V. Yakimenko</i>	

Low-energy demonstration accelerator (LEDA) radio-frequency quadrupole (RFQ) results	488
<i>L.M. Young, G.O. Bolme, J.D. Gilpatrick, K.F. Johnson, W.P. Lysenko, P.M. McGehee, S. Nath, D.E. Rees, A.H. Regan, L.J. Rybarcyk, J.D. Schneider, M. Schulze, J.D. Sherman, D.L. Schrage and H.V. Smith, Jr.</i>	
Generation of low emittance beams using III-V semiconductor photocathodes in an RF gun	504
<i>J.E. Clendenin, T. Kotseroglou, G.A. Mulhollan, D.T. Palmer and J.F. Schmerge</i>	
Streak camera enhanced quadrupole scan technique	511
<i>S.M. Gierman</i>	
A high-charge high-brightness L-band photocathode RF gun	527
<i>M.E. Conde, W. Gai, R. Konecny, J.G. Power, P. Schoessow and X. Sun</i>	
HOMDYN study for the LCLS RF photo-injector	534
<i>M. Ferrario, J.E. Clendenin, D.T. Palmer, J.B. Rosenzweig and L. Serafini</i>	
Limitations on the resolution of YAG:CE beam profile monitor for high brightness electron beam	564
<i>A. Murokh, J. Rosenzweig, V. Yakimenko, E. Johnson and X.J. Wang</i>	

INDUSTRIAL PARTICIPATION

Application of bright ion beams for ion implantation used in the manufacture of semiconductor devices	583
<i>D.R. Swenson</i>	
Compact, integrated photoelectron linacs	585
<i>D. Yu</i>	

APPENDICES

Appendix A: Workshop participants	599
