Preface	vii
Chapter 1 Patterns: Prelude to a Dynamical Description	1
Chapter 2 Linear Stage of Pattern Formation	15
Chapter 3 Model Equations	27
3.1 Swift–Hohenberg equation	29
3.2 Newell–Whitehead–Segel equation	35
3.3 Coupled amplitude equations	38
3.4 Phase equations	42
Chapter 4 The Ginzburg–Landau Equation	45
4.1 The dissipative Ginzburg–Landau equation	46
4.2 Nerve membrane excitation and the CGL equation	48
4.3 Optical dynamics and the CGL equation	50
4.4 Simple patterns in the CGL equation	52
4.5 Phase equations revisited	55
4.6 Gallery of phenomena	57
Chapter 5 ‘Crystal’ Formation	63
Chapter 6 Quasicrystals	75
6.1 Octagons, decagons, and dodecagons	78
6.2 A generalized Swift-Hohenberg model	81
6.3 The ‘turbulent’ crystal	82

Chapter 7	Breaking of Order	87
7.1	A simple model for domain walls	89
7.2	Topological defects	92
7.3	The birth of penta-hepta defects	96
7.4	Dislocations and domain walls in Faraday ripples	102
Chapter 8	Localized Patterns	107
8.1	Bistable media	107
8.2	Dynamical disorder of structures	114
8.3	Particle interaction	115
8.4	Chaotic scattering	118
Chapter 9	Spirals	129
9.1	Active spirals	133
9.1.1	Spirals in the complex Ginzburg–Landau equation	133
9.1.2	Spirals in the FitzHugh-Nagumo model	136
9.2	Passive spirals	142
9.2.1	Spirals in the Faraday experiment	143
9.2.2	Spirals in Rayleigh-Bénard convection	145
Chapter 10	Patterns in Oscillating Soap Films	151
10.1	Introduction	151
10.2	Observations	152
10.3	Models for vorticity generation	158
10.3.1	Marangoni wave model	160
10.3.2	The role of air	162
Chapter 11	Patterns in Colonies of Microorganisms	173
11.1	Dictyostelium discoideum	174
11.2	Escherichia coli	178
11.3	Bacillus subtilis	184
Chapter 12	Spatial Disorder	189
12.1	Introductory remarks	189
12.2	Characteristics of space series	193
12.3	The Grassberger-Procaccia algorithm	197
12.4	Qualitative description of developing disorder	199
12.5	Dynamical dimension of defect-mediated turbulence	202

Chapter 13	Patterns in Chaotic Media	205
13.1	Introductory remarks	205
13.2	Chaotic synchronization	208
13.3	Coexistence of regular patterns and chaos	211
13.4	Coarse grain spatio-temporal patterns	214
13.5	Coherent patterns on a chaotic checkerboard	220
Chapter 14	Epilogue: Living matter and dynamic forms	225
14.1	Hallucinations	227
14.2	Spatio-temporal patterns and information processing	234
Appendix A	A Short Guide to Nonlinear Dynamics	239
A.1	Dynamical systems	239
A.1.1	Types of dynamical systems	240
A.1.2	Equilibrium states	241
A.1.3	Homoclinic and heteroclinic trajectories	245
A.1.4	Limit cycles	248
A.1.5	Quasiperiodic motion	249
A.2	Bifurcations	250
A.2.1	Bifurcations of equilibrium states	252
A.2.2	Birth of periodic motions	258
A.2.3	Change of stability in periodic motions	260
A.3	Chaotic Oscillations	261
A.3.1	Characteristics of chaos and the strange attractor	261
A.3.2	Chaotic Hamiltonian systems	263
A.3.3	Chaotic self-excited oscillations	264
A.4	Synchronization of oscillations	266
A.5	Dynamical chaos and turbulence	271
Appendix B	Key Experiments in Pattern Formation	279
B.1	Parametrically excited patterns	279
B.1.1	Experiments with liquids	279
B.1.2	Experiments with granular material	287
B.2	Thermal convection	292
B.2.1	Rayleigh–Bénard convection	292
B.2.2	Patterns in Rayleigh–Bénard convection	295
B.2.3	Bénard–Marangoni convection	297
B.3	Diffusive chemical reactions	302

B.3.1	Turing patterns	302
B.3.2	Oscillating chemical reactions	306
	Bibliography	309
	Index	320
