

## Table of contents

Preface	vii
Dictionary : Condensed matter - High energy physics & cosmology <i>G.E. Volovik</i>	1
Classification of topological defects and their relevance to cosmology and elsewhere <i>T.W.B. Kibble</i>	7
The Normal and Superfluid States of Liquid $^3\text{He}$ <i>A. J. Leggett</i>	33
Formation, interaction and observation of topological defects <i>T. Vachaspati</i>	55
Shards of broken symmetry: topological defects as traces of the phase transition dynamics <i>W.H. Zurek, L.M.A. Bettencourt, J. Dziarmaga and N.D. Antunes</i>	77
The 'Grenoble' cosmological experiment: The Kibble-Zurek scenario in superfluid $^3\text{He}$ <i>C. Bäuerle, Yu.M. Bunkov, S. Fisher and H. Godfrin</i>	105
"Aurore de Venise" - Cosmological scenario of the A-B phase transition in superfluid $^3\text{He}$ <i>Yu. M. Bunkov</i>	121
Non-equilibrium phase transitions in condensed matter and cosmology: spinodal decomposition, condensates and defects <i>D. Boyanovsky, H.J. de Vega and R. Holman</i>	139
Defect formation through boson condensation in quantum field theory <i>G. Vitiello</i>	171
Magnetic monopoles and vortices in the standard model of electroweak interactions <i>A. Achúcarro</i>	193
Time-dependent Ginzburg-Landau theory and duality <i>A. M. J. Schakel</i>	213
Broken Symmetry and Nonequilibrium Superfluid $^3\text{He}$ Circular Birefringence of Propagating Transverse Currents <i>J. A. Sauls</i>	239
