Preface	xi
Abbreviations	xv
List of figures, tables and plates	xvii
1 Introduction (<i>André Balogh, Richard G. Marsden and Edward J. Smith</i>)	1
1.1 The heliosphere	1
1.1.1 Introduction to the heliosphere	1
1.1.2 An outline of the origin and properties of the heliosphere	3
1.1.3 Discovery missions to the heliosphere	7
1.2 <i>Ulysses</i> : scientific objectives and mission characteristics	8
1.2.1 Introduction	8
1.2.2 The <i>Ulysses</i> orbit	9
1.2.3 Scientific payload	10
1.2.4 Spacecraft and mission operations	13
1.2.5 Brief history	15
1.2.6 <i>Ulysses</i> data archiving	17
1.2.7 <i>Ulysses</i> orbital elements	17
1.3 Highlights of the scientific discoveries of the <i>Ulysses</i> mission	20
1.3.1 Introduction	20
1.3.2 High-latitude heliosphere	21
1.3.3 Coupling between the high- and low-latitude heliosphere	28
1.3.4 Interstellar constituents and the medium outside the heliosphere	35
1.4 References	39
2 The solar-wind and heliospheric magnetic field in three dimensions (<i>Marcia Neugebauer</i>)	43
2.1 Overall pattern of high- and low-speed winds – the big picture	43
2.2 Solar-wind speed	44

2.3	Density and mass, momentum, and energy fluxes	49
2.4	Structures in the high-latitude wind	52
2.5	Heavy ions.	58
2.5.1	Ionization states of heavy ions.	59
2.5.2	Abundance of heavy ions	62
2.5.3	Helium	65
2.6	Ion-distribution functions	68
2.6.1	Temperatures	68
2.6.2	High-energy tails	73
2.6.3	Ion beams	73
2.6.4	Anisotropies	78
2.7	Electrons	80
2.7.1	Overview.	80
2.7.2	<i>Ulysses</i> instrumentation for electron measurements	81
2.7.3	Radial temperature gradient and polytrope index	83
2.7.4	Core anisotropy	86
2.7.5	Halo electrons and the interplanetary potential.	87
2.7.6	Electron-heat flux	88
2.7.7	Strahl	90
2.8	Heliospheric magnetic field	91
2.8.1	Solar source and field polarity	92
2.8.2	Field strength	93
2.8.3	Field direction	94
2.9	Acknowledgments	98
2.10	References	99
3	Corotating and transient structures in the heliosphere (<i>R. J. Forsyth and J. T. Gosling</i>)	107
3.1	Introduction	107
3.2	Corotating structures	108
3.2.1	CIR formation and structure.	108
3.2.2	<i>Ulysses</i> CIR observations	116
3.2.3	Three-dimensional models of CIRs.	128
3.3	Transient flows	134
3.3.1	The origin of CMEs and their signatures in the heliosphere	134
3.3.2	Summary of <i>Ulysses</i> ICME observations	142
3.3.3	ICMEs observed at high latitudes	148
3.4	Summary and Conclusion	158
3.5	Acknowledgements	159
3.6	References	159
4	<i>Ulysses</i> measurements of waves, turbulence and discontinuities (<i>Tim S. Horbury and Bruce Tsurutani</i>)	167
4.1	Introduction	167
4.1.1	Why are <i>Ulysses</i> data unique?	167

4.2	Fluctuations in the polar heliosphere	168
4.2.1	General character of fluctuations	170
4.2.2	Large-scale evolution in the polar heliosphere	175
4.2.3	Small-scale turbulent processes	185
4.2.4	Fluctuations and solar-wind structure	192
4.3	Discontinuities and Alfvén waves	195
4.3.1	DD radial and latitudinal gradients	196
4.3.2	Discontinuity ‘thicknesses’	199
4.3.3	The relationship between discontinuities and Alfvén waves	201
4.3.4	Alfvénic shocks?	205
4.3.5	North–south asymmetries?	205
4.3.6	Evolution of non-linear Alfvén waves and rotational discontinuities	206
4.3.7	TDs versus RDs	207
4.3.8	Nature of tangential discontinuities at high latitudes	209
4.3.9	MDs and magnetic holes	212
4.3.10	Slow shocks	217
4.4	Conclusions	218
4.5	Acknowledgements	222
4.6	References	222
5	Waves and instabilities in the three-dimensional heliosphere (Robert J. MacDowall and Paul J. Kellogg)	229
5.1	Introduction	229
5.1.1	Wave modes in the solar wind	229
5.1.2	Instrumentation for wave observations: <i>Ulysses</i> overview	231
5.2	Radio bursts caused by solar flares	233
5.2.1	Type III radio burst theory and observations	233
5.2.2	Applications in remote studies of the IPM	239
5.3	Waves associated with IP shocks	240
5.3.1	Low-frequency electromagnetic waves	241
5.3.2	Ion acoustic waves	241
5.3.3	Langmuir waves	244
5.3.4	Radio waves	244
5.4	Waves in coronal mass ejections and magnetic clouds	245
5.5	Waves at IP discontinuities and magnetic holes	246
5.6	The ‘quiet’ solar wind	249
5.6.1	Whistler waves and heat-flux regulation	250
5.6.2	VLF waves associated with expanding regions of the solar wind	250

5.6.3	More ion acoustic waves	250
5.6.4	Thermal noise	251
5.7	Summary and remaining questions	253
5.8	References	254
6	Energetic particles in the heliosphere (<i>Louis J. Lanzerotti and Trevor R. Sanderson</i>)	259
6.1	Introduction and Stage Setting	259
6.2	Sources of energetic particles	263
6.2.1	Solar sources	263
6.2.2	Interplanetary sources	266
6.2.3	Low energy anomalous cosmic rays	272
6.3	Particle propagation and transport	275
6.3.1	Latitudinal particle transport	276
6.3.2	Propagation of charged particles in interplanetary structures	276
6.4	Periodic structures in particle flux time series	278
6.5	<i>Ulysses</i> and solar–terrestrial connections	280
6.6	Summary	282
6.7	Acknowledgements	282
6.8	References	282
7	Heliospheric and interstellar phenomena revealed from observations of pickup ions (<i>George Gloeckler, Johannes Geiss and Lennard A. Fisk</i>)	287
7.1	Introduction	287
7.2	Production and measurements of pickup ions	288
7.3	Hydrogen and helium pickup ions	291
7.3.1	Pickup-ion velocity distributions observed in the high-speed solar wind of the polar coronal hole	292
7.3.2	Pickup-ion velocity distributions observed in the in-ecliptic, low-speed solar wind	299
7.4	Interstellar pickup ions with masses heavier than helium	304
7.5	Ionization state of the local interstellar cloud	306
7.6	Composition of the local interstellar cloud	309
7.7	A new pickup-ion population from an extended inner source	312
7.8	Interaction of pickup ions with the solar wind	319
7.9	Summary and conclusions	321
7.10	Acknowledgments	322
7.11	References	323
8	Cosmic rays at all latitudes in the inner heliosphere (<i>R. Bruce McKibben</i>)	327
8.1	Introduction	327
8.1.1	Motivation for the <i>Ulysses</i> investigations	328
8.1.2	Status of modulation and cosmic-ray composition studies prior to <i>Ulysses</i>	329
8.1.3	Summary of available <i>Ulysses</i> measurements	331

8.2	Heliospheric modulation of cosmic rays, electrons and atypical components	334
8.2.1	Summary of modulation theory and available modelling tools	334
8.2.2	Observations of solar cycle modulation	336
8.2.3	Observations of short-term, 26-day recurrent modulations	346
8.2.4	Implications of measurements for modulation theory and models	349
8.3	Composition studies	351
8.3.1	Instrumentation for isotopic studies	351
8.3.2	Measurements of stable isotopes in the galactic cosmic rays	353
8.3.3	Measurements of radioactive isotopes in the galactic cosmic rays	357
8.4	Future contributions expected from the continuing Ulysses mission	361
8.4.1	Modulation studies	361
8.4.2	Composition studies	363
8.4.3	Summary outlook	364
8.5	Acknowledgments	364
8.6	References	364
9	Cosmic dust (<i>Eberhard Grün, Harald Krüger and Markus Landgraf</i>)	373
9.1	Introduction	373
9.1.1	Dust objectives	375
9.2	Instrumentation	376
9.3	Interplanetary dust background in the ecliptic plane and above the solar poles	378
9.3.1	<i>Ulysses</i> ' south–north traverse	380
9.3.2	β -meteoroids	381
9.3.3	Mass distribution of interplanetary particles	382
9.3.4	Description of model distributions	382
9.3.5	Comparison with zodiacal light	385
9.4	Electromagnetically interacting dust: Jupiter dust streams	385
9.4.1	Observations	385
9.4.2	Particle masses and speeds	389
9.4.3	Dust source and particle acceleration in Jupiter's magnetosphere	390
9.5	Interstellar dust	393
9.5.1	Discovery and identification of interstellar dust grains	394
9.5.2	Mass distribution and cosmic abundances	396
9.6	Summary and conclusions	398
9.7	Acknowledgements	400
9.8	References	400
