

Table of Contents

Preface	IX
Notation	1
1 The Theory of Light and Wave Mechanics	4
1.1 Theory of Light and Wave Mechanics	4
1.2 The Photon Equations	6
1.3 Other Representations of the Photon Equations	8
1.4 Two Kinds of Photons	10
1.5 Hamiltonian, Lagrangian, Current, Energy, Spin	15
1.6 Relativistic Noninvariance of the Decomposition Spin 1–Spin 0	19
1.7 The Problem of a Massive Photon	21
1.8 General Theory of Particles with Maximum Spin n	24
1.9 The Particles with Maximum Spin 2. Graviton	29
1.10 Comparison with Other Theories	36
2 The Spinor Field Model	39
2.1 Fusion Concepts in Relativistic Quantum Field Theory	39
2.2 Review of Regularization	47
2.3 The Decomposition Theorem	50
2.4 Lagrange Formalism	55
2.5 Canonical Spinor Field Quantization	57
2.6 Super-indexing	58
2.7 Symmetry Conditions	61
3 Covariant Quantum Field Dynamics	69
3.1 Introduction	69
3.2 Construction of Functional States	72
3.3 Symmetries in Functional Space	76
3.4 Functional Field Equations	82
3.5 Nonperturbative Normal Ordering	87
3.6 Vertex Renormalization	93
3.7 Limits of Covariant Formalism	95
4 Algebraic Schrödinger Representation	97
4.1 Introduction	97
4.2 Subfermion State Spaces	99
4.3 Nonorthogonal Basis Sets	102
4.4 Cyclic Basis Vector Representations	106
4.5 Renormalized Eigenvalue Equations	110
4.6 Functional Eigenvalue Equations	113

4.7	Normal Ordering	118
4.8	Covariant Equations on the Hyperplane	120
5	Weak Mapping Theorems	126
5.1	Introduction	126
5.2	Hard Core States	128
5.3	Self-consistent Propagators	130
5.4	Effective Boson Dynamics	132
5.5	Direct and Exchange Forces	136
5.6	Weak Mapping in Functional Space	138
5.7	Dressed Particle States	140
5.8	Effective Boson and Composite Fermion Dynamics	144
6	Generalized de Broglie–Bargmann–Wigner Equations	148
6.1	Introduction	148
6.2	Covariant Bound State Equations	150
6.3	Vector Boson States	155
6.4	Bound State Quantum Numbers	160
6.5	Three-Particle Bound States	167
6.6	Four-Fermion Bound States	173
6.7	Bound State Stability	179
6.8	Regularization and Probability Interpretation	184
7	Effective $SU(2) \times U(1)$ Gauge Theory	190
7.1	Introduction	190
7.2	Local $SU(2) \times U(1)$ Gauge Theory	193
7.3	Effective Boson–Fermion Dynamics	201
7.4	Boson States and Dual States	204
7.5	Evaluation of the Boson Dynamics	208
7.6	Subfermion Shell Model States	214
7.7	Effective Boson–Fermion Interaction	219
8	Effective Electro–weak Theory	226
8.1	Phenomenological Electro–weak Boson Dynamics	226
8.2	Phenomenological Constraints	233
8.3	Effective Dynamics with Symmetry Breaking	236
8.4	Spectrum of Physical Particles	244
8.5	Observables of Boson Substructures	250
8.6	Effective Quantum Hamiltonians	259
8.7	Estimate of Residual Interactions	265
8.8	Estimate of Exchange Forces	271
9	Fermions and Gravitation	276
9.1	Introduction	276
9.2	Anholonomic Gravitation Theory	278

9.3	Weak Mapping with Gravitons	281
9.4	Graviton States	285
9.5	Linear Graviton Equations	289
9.6	Dressed Fermion States	293
9.7	Fermion–Graviton Coupling	296
	Bibliography	300
	Index	323
