

CONTENTS

1. NONLINEAR OPTICS IN MICROSPHERES <i>by M.H. FIELDS, J. POPP AND R.K. CHANG (NEW HAVEN, CONNECTICUT)</i>	
§ 1. INTRODUCTION	3
§ 2. CAVITY MODES OF MICROSPHERES	4
2.1. Ray and wave optics	5
2.2. Electromagnetic theory	7
2.2.1. Properties of MDRs	7
2.2.2. Excitation of MDRs	13
2.3. Quantum mechanical analog	17
2.4. Quasi-normal modes – leaky cavities	19
§ 3. PERTURBATION EFFECTS ON MICROSPHERE RESONANCES	20
3.1. Radially inhomogeneous spheres – separation of variables	21
3.2. T-matrix method	22
3.3. Time-independent perturbation method (TIPM)	23
3.4. Effective-average method: modal gain or loss	28
3.5. Comparison of the perturbation methods	32
3.6. Chaotic light – asymmetrical resonant cavities	34
§ 4. CAVITY-MODIFIED OPTICAL PROCESSES IN MICROSPHERES	40
4.1. Classical electromagnetic theory	41
4.2. Density of states for leaky cavities	44
4.3. Generalized Fermi's Golden Rule	44
4.4. Strong-coupling regime	48
4.5. Experimental observations of cavity QED effects in microspheres	48
§ 5. FLUORESCENCE AND LASING IN MICROSPHERES	53
5.1. Fluorescence in microspheres	53
5.2. Microsphere lasers	56
5.2.1. Development of microsphere lasers	56
5.2.2. Properties and applications of microsphere lasers	59
5.3. Other microcavity lasers	68
§ 6. NONLINEAR OPTICAL PROCESSES	69
6.1. Spontaneous Raman scattering	70
6.2. Stimulated Raman scattering (SRS)	71
6.2.1. Cavity effects	71
6.2.2. Enhancing SRS	75
6.3. Third-order sum-frequency generation	78

6.4. Other nonlinear processes	81
6.4.1. Coherent anti-Stokes Raman scattering (CARS), stimulated anti-Stokes Raman scattering (SARS), and coherent Raman mixing (CRM)	81
6.4.2. Stimulated Brillouin scattering (SBS)	82
6.4.3. Laser-induced radiation leakage	84
§ 7. CONCLUSION	89
ACKNOWLEDGEMENTS	89
REFERENCES	89

2. PRINCIPLES OF OPTICAL DISK DATA STORAGE

by J. CARRIERE (TUCSON, ARIZONA), R. NARAYAN (ALAMEDA, CALIFORNIA),
W.-H. YEH, C. PENG, P. KHULBE, L. LI (TUCSON, ARIZONA), R. ANDERSON
(TOKYO, JAPAN), J. CHOI AND M. MANSURIPUR (TUCSON, ARIZONA)

§ 1. INTRODUCTION	99
§ 2. WHAT IS IN AN OPTICAL HEAD	101
§ 3. FOCUSING AND TRACKING	104
3.1. Focusing schemes	105
3.1.1. Pupil obscuration method	106
3.1.2. Bi-prism method	106
3.1.3. Astigmatic lens method	108
3.1.4. Wax-wane method	108
3.1.5. Ring-toric lens method	109
3.2. Tracking schemes	109
3.2.1. Push-pull method	110
3.2.2. Three-beam method	111
3.2.3. Sample-servo method	112
3.2.4. Differential phase-detection (DPD) method	113
§ 4. MASTERING	115
4.1. Introduction	115
4.2. Mastering process	115
4.3. Basic parameters of mastering	117
§ 5. SUBSTRATES	118
5.1. Substrate materials – requirements	118
5.1.1. Plastic	118
5.1.2. Glass	119
5.2. Substrate birefringence	119
5.2.1. Measurement methods	120
5.2.2. Lateral birefringence	122
5.2.3. Vertical birefringence	123
5.3. Tilt tolerance	124
5.3.1. Aberrations	124
5.3.2. Tracking	125
5.3.2.1. Intertrack crosstalk	125

5.3.2.2. Edge shift or jitter	126
5.3.3. Focusing	126
5.4. Future trends	126
§ 6. MAGNETO-OPTICAL (MO) RECORDING	127
6.1. MO media	127
6.1.1. MO layers	127
6.1.2. Magnetic anisotropy	129
6.1.3. Thermomagnetic recording	129
6.1.4. Coercivity	131
6.1.5. MO readout	133
6.2. Methods of media characterization	133
6.2.1. Vibrating sample magnetometer	133
6.2.2. Magneto-optic loop tracer	134
6.2.3. Polarized-light microscopy (static tester)	135
6.2.4. Other high resolution imaging techniques	137
6.3. Exchange-coupled magnetic multilayers	138
6.3.1. LIMDOW	139
6.3.2. MSR	142
6.3.3. MAMMOS	146
§ 7. PHASE CHANGE MEDIA	147
7.1. Introduction to phase change recording	147
7.2. Materials for PC recording	148
7.3. PC Optical disk structure	150
7.4. Static tester	151
7.5. Measurement of reflectivity profiles during crystallization and melting using a static tester	152
7.6. Crystallization/amorphization kinetics	156
7.7. Future trends in high-density PC recording	159
§ 8. DIFFRACTION FROM PERIODIC STRUCTURES	159
8.1. The baseball pattern	161
8.2. Diffraction from grooves through the solid immersion lens (SIL)	165
8.3. Surface wave excitation	166
8.4. Polarization effects	168
§ 9. FUTURE TRENDS IN OPTICAL DISKS AND DRIVES	170
9.1. Blue diode lasers	170
9.2. MAMMOS and domain wall displacement (DWD)	171
9.3. Improved cyclability of phase change media	171
9.4. Liquid crystal servo for aberration correction	172
9.5. Substrate/mastering improvements	172
9.6. Multilayer ROM disks	172
9.7. Near-field optical systems	173
9.8. Miniaturization of optical head components	173
9.9. Final remarks	174
REFERENCES	174

3. ELLIPSOMETRY OF THIN FILM SYSTEMS by I. OHLÍDAL AND D. FRANTA (BRNO, CZECH REPUBLIC)	
§ 1. INTRODUCTION	183
§ 2. THEORETICAL BACKGROUND	183
2.1. Model of the thin film system	183
2.2. Jones formalism	184
2.3. Representation of polarized light by complex numbers: The polarization transfer function	185
2.4. Description of polarized light by azimuth and ellipticity	186
§ 3. PRINCIPLES OF ELLIPSOMETRY	187
3.1. Conventional ellipsometry	188
3.2. Generalized ellipsometry	188
§ 4. THEORY OF MEASUREMENTS IN ELLIPSOMETRY	189
4.1. Null ellipsometry	189
4.2. Rotating-analyzer ellipsometry	192
4.3. Phase-modulated ellipsometry	193
4.4. Other ellipsometric techniques	195
§ 5. ELLIPSOMETRIC QUANTITIES OF IDEAL THIN FILM SYSTEMS	196
5.1. Optically isotropic systems	197
5.2. Optically anisotropic systems	200
5.2.1. Systems containing media with symmetric permittivity tensors	205
5.2.2. Magneto-optical systems	207
§ 6. ELLIPSOMETRIC QUANTITIES OF IMPERFECT THIN FILM SYSTEMS	211
6.1. Ellipsometric quantities of the thin film systems with rough boundaries	211
6.1.1. Microrough systems	213
6.1.2. Slightly rough systems	215
6.1.3. Moderately rough systems	217
6.2. Optical quantities of the inhomogeneous thin film system	223
6.2.1. Exact solution	223
6.2.2. Approximate solutions	227
6.3. Transition layers	229
6.4. Volume inhomogeneities	231
6.5. Thin film systems with other defects	233
§ 7. EXPERIMENTAL METHODS	235
7.1. Monochromatic single angle of incidence method	236
7.2. Monochromatic multiple angle of incidence method	238
7.3. Spectroscopic single angle of incidence method	244
7.4. Spectroscopic multiple angle of incidence method	250
7.5. Immersion modifications of the ellipsometric methods	255
7.6. Combined ellipsometric methods	259
7.7. Combination of the ellipsometric methods with the other optical methods	265
7.8. Methods of generalized ellipsometry	270
7.9. Ellipsometric methods in magneto-optics	273
7.10. Discussion of the ellipsometric methods	275
§ 8. CONCLUSION	276

4. OPTICAL TRUE-TIME DELAY CONTROL SYSTEMS FOR WIDEBAND PHASED ARRAY ANTENNAS by R.T. CHEN AND Z. FU (AUSTIN, TEXAS)	
§ 1. INTRODUCTION TO PHASED ARRAY ANTENNAS	285
1.1. Introduction to phased array antennas	285
1.2. Modern phased array antenna requirements	287
1.3. Challenges of modern phased array antennas	288
§ 2. PHOTONIC TECHNOLOGY IN PHASED ARRAY ANTENNAS	290
2.1. Overview	290
2.2. Fourier optics beamforming for phased array antennas	291
2.3. Optical radio frequency (RF) phase control	293
2.4. Optical true-time delay feed for phased array antennas	295
§ 3. BULK OPTICS AND ACOUSTO-OPTICS TRUE-TIME DELAY	297
3.1. Bulk optics true-time delay lines	297
3.2. Acousto-optic true-time delay lines	302
§ 4. OPTICAL FIBER TRUE-TIME DELAY LINES	304
4.1. Fiber length switching true-time delay	304
4.1.1. Basic fiber switching time delay	304
4.1.2. Square root cascaded delay line	306
4.1.3. Binary fiber optic delay line	307
4.1.4. M-ary fiber optic delay line	309
4.2. Wavelength-tunable dispersive fiber true-time delay line	310
4.3. Wavelength-tunable fiber grating true-time delay line	312
4.4. Other fiber true-time delay approaches	319
§ 5. OPTICAL WAVEGUIDE-BASED TRUE-TIME DELAY LINES	324
5.1. GaAsbased optical waveguide true-time delay	326
5.2. Silica based optical waveguide true-time delay	329
5.3. Polymer-based optical waveguide true-time delay	333
§ 6. SUBSTRATE-GUIDED WAVE TRUE-TIME DELAY MODULES	337
6.1. Single wavelength substrate-guided wave true-time delay	337
6.2. Wavelength fine-tuning substrate-guided wave true-time delay	341
§ 7. WAVELENGTH-DIVISION MULTIPLEXED OPTICAL TRUE-TIME DELAY LINES	343
7.1. Photonic true-time delay based on wavelength-division multiplexing	343
7.2. Photonic true-time delay based on array partition and wavelength-division multiplexing	347
§ 8. SUMMARY	354
ACKNOWLEDGEMENTS	355
REFERENCES	355

5. QUANTUM STATISTICS OF NONLINEAR OPTICAL COUPLERS <i>by J. PEŘINA JR AND J. PEŘINA (OLOMOUC, CZECH REPUBLIC)</i>	
§ 1. INTRODUCTION	363
§ 2. QUANTUM EVOLUTION OF INTERACTING OPTICAL FIELDS	366
§ 3. QUANTUM STATISTICAL PROPERTIES OF INTERACTING OPTICAL FIELDS	370
3.1. Single-mode case	372
3.2. Coupled-mode case	374
3.3. Phase properties	375
§ 4. COUPLERS BASED ON SECOND-HARMONIC AND SUBHARMONIC GENERATION	375
4.1. Codirectional coupler with $\chi^{(2)}$ and $\chi^{(1)}$ media	375
4.1.1. Short-length approximation	376
4.1.2. Parametric approximation	377
4.2. Contradirectional coupler with $\chi^{(2)}$ and $\chi^{(1)}$ media	380
4.2.1. Short-length approximation	381
4.2.2. Parametric approximation	381
4.3. Codirectional coupler with one $\chi^{(2)}$ and two $\chi^{(1)}$ media	384
4.4. Codirectional coupler with two $\chi^{(2)}$ and one $\chi^{(1)}$ media	386
4.5. Codirectional coupler with two $\chi^{(2)}$ waveguides	387
4.6. Contradirectional coupler with two $\chi^{(2)}$ media	390
§ 5. COUPLERS BASED ON NONDEGENERATE OPTICAL PARAMETRIC PROCESSES	392
5.1. Codirectional coupler with two $\chi^{(2)}$ media	392
5.1.1. Short-length approximation	393
5.1.2. Parametric approximation	393
§ 6. COUPLERS BASED ON THE KERR EFFECT	395
§ 7. COUPLERS BASED ON RAMAN AND BRILLOUIN SCATTERING	401
7.1. Short-length approximation	402
7.2. Analytical and numerical results	403
7.2.1. Coupler based on Brillouin scattering	405
7.2.2. Coupler based on Raman scattering	407
7.3. Raman coupler with broad phonon spectra	410
7.4. Linear operator corrections	411
§ 8. MISCELLANEOUS COUPLERS	412
8.1. Bandgap coupler	412
8.2. Coupler combining $\chi^{(2)}$ and $\chi^{(3)}$ media	414
§ 9. CONCLUSIONS	415
§ 10. ACKNOWLEDGMENTS	416
REFERENCES	416

6. QUANTUM PHASE DIFFERENCE, PHASE MEASUREMENTS AND STOKES OPERATORS <i>by A. LUIS AND L.L. SÁNCHEZ-SOTO (MADRID, SPAIN)</i>	
§ 1. INTRODUCTION	423
§ 2. STOKES OPERATORS AND PHASE DIFFERENCE	425
2.1. Stokes parameters and Stokes operators	425

2.2. Quantum and classical phase difference	431
§ 3. QUANTUM RELATIVE PHASE FORMALISMS	434
3.1. Phase difference from Stokes parameters	435
3.2. Eight-port homodyne detection	435
3.3. Many-port homodyne detection	440
3.4. Radiation phase	443
3.5. Polar decomposition of Stokes operators	444
3.6. Relative-phase operator	448
3.7. Difference of phases	449
§ 4. PHASE-SHIFT DETECTION IN SU(2) INTERFEROMETERS	454
§ 5. FROM TWO-MODE PHASE TO ONE-MODE PHASE AND BACK	465
5.1. Operational definitions	466
5.2. Polar decomposition of Stokes operators	469
5.3. Relative-phase operator	470
5.4. Homodyne detection with nontrivial auxiliary mode	471
§ 6. CONCLUSIONS	473
§ 7. ACKNOWLEDGEMENT	473
REFERENCES	473
7. OPTICAL SOLITONS IN MEDIA WITH A QUADRATIC NONLINEARITY <i>by C. ETRICH, F. LEDERER (JENA, GERMANY), B.A. MALOMED (TEL AVIV, ISRAEL), T. PESCHEL AND U. PESCHEL (JENA, GERMANY)</i>	
§ 1. INTRODUCTION	485
§ 2. DERIVATION OF THE BASIC EQUATIONS	491
2.1. Bulk medium	492
2.2. Waveguides	497
2.2.1. Bragg waveguide	500
2.2.2. Waveguide coupler	503
2.2.3. Waveguide arrays	505
§ 3. MODULATIONAL INSTABILITY OF CONTINUOUS PLANE WAVE SOLUTIONS	506
§ 4. SOLITONS IN PLANAR WAVEGUIDES	510
4.1. Vectorial interaction without walk-off	510
4.1.1. Hamiltonian system	511
4.1.2. Soliton solutions	512
4.1.3. Schrödinger limit	515
4.1.4. Stability of solitons	516
4.1.5. Variational approach	520
4.2. Scalar interaction with walk-off	522
4.3. Effective potential and multiple hump solutions	526
4.4. Persistent oscillations	529
§ 5. SOLITONS IN PERIODIC WAVEGUIDE STRUCTURES – BRAGG SOLITONS	533
5.1. Basic concepts	534
5.2. Bragg solitons in the local approximation	537

§ 6. SOLITONS AND THEIR BIFURCATIONS IN NONLINEAR COUPLERS	542
6.1. Stationary solutions	543
6.2. Stability behavior	546
§ 7. DISCRETE SOLITONS IN WAVEGUIDE ARRAYS	547
7.1. Discrete diffraction and dispersion relations	548
7.2. Various types of discrete soliton solutions	550
7.2.1. Moderately localized discrete solitons	551
7.2.2. Strongly localized discrete solitons	553
§ 8. MULTIDIMENSIONAL SOLITONS	554
8.1. Analytical results (variational approximation)	556
8.2. Numerical results	560
8.3. Spinning spatio-temporal solitons and other generalizations	562
§ 9. CONCLUSIONS	563
