

## Table of Contents

<b>PREFACE</b>	<b>ix</b>
<b>INTRODUCTION</b>	<b>xiii</b>
<b>References</b>	<b>xvii</b>
<b>1 THE BOLTZMANN EQUATION AS A PHYSICAL AND MATHEMATICAL MODEL</b>	<b>1</b>
1.1 Different mathematical forms of the kinetic equation . . . .	1
1.2 Peculiarities of kinetic approach for describing physical properties . . . . .	6
1.3 Formulation of problems and boundary conditions . . . . .	10
1.4 The forms of the Boltzmann equations in some physical cases	13
<b>References</b>	<b>21</b>
<b>2 SURVEY OF MATHEMATICAL APPROACHES TO SOLVING THE BOLTZMANN EQUATION</b>	<b>23</b>
2.1 General notes on classification of methods . . . . .	23
2.2 Methods combining analytical and numerical features. Some partial solutions . . . . .	25
2.3 Approaches based on kinetic models . . . . .	27
2.4 Numerical simulation methods . . . . .	29
2.5 Direct simulation Monte Carlo methods . . . . .	30
2.6 Methods of direct integration . . . . .	31
2.7 Comparison of direct integration and direct simulation . . .	33
<b>References</b>	<b>39</b>
<b>3 MAIN FEATURES OF THE DIRECT NUMERICAL APPROACHES</b>	<b>45</b>
3.1 Discrete velocities and approximation in velocity space . . .	45
3.2 Approximation in physical space. Finite-difference schemes and iterations . . . . .	49
3.3 Splitting method . . . . .	51

3.4	Finite volume scheme . . . . .	56
3.5	Evaluation of the collision integrals by Monte Carlo technique . . . . .	58
3.6	Quasi Monte Carlo technique . . . . .	61
<b>References</b>		<b>67</b>
<b>4</b>	<b>DETERMINISTIC (REGULAR) METHOD FOR SOLVING THE BOLTZMANN EQUATION</b>	<b>69</b>
4.1	General features of the method . . . . .	69
4.2	Approach to approximation of the collision integrals. Integration over velocity space . . . . .	69
4.3	Exact evaluation of integrals over impact parameters . . . . .	70
4.4	Approximation of the collision integrals by quadratic form with constant coefficients . . . . .	75
4.5	Simplification for velocity space in the case of isotropic symmetry . . . . .	77
<b>References</b>		<b>83</b>
<b>5</b>	<b>CONSTRUCTION OF CONSERVATIVE SCHEME FOR THE KINETIC EQUATION</b>	<b>85</b>
5.1	Different definitions of conservativity . . . . .	85
5.2	Conservative splitting method . . . . .	87
5.3	Characteristics and advantages of the conservative schemes . . . . .	93
5.4	Practical verification of the method . . . . .	98
5.5	Conservative method for gas mixtures . . . . .	103
<b>References</b>		<b>107</b>
<b>6</b>	<b>PARALLEL ALGORITHMS FOR THE KINETIC EQUATION</b>	<b>109</b>
6.1	Parallel implementation for the direct methods . . . . .	109
6.2	Several parallel algorithms . . . . .	111
6.3	Examples of parallel applications of the algorithms . . . . .	113
<b>References</b>		<b>119</b>
<b>7</b>	<b>APPLICATION OF THE CONSERVATIVE SPLITTING METHOD FOR INVESTIGATING NEAR CONTINUUM GAS FLOWS</b>	<b>121</b>
7.1	Some approaches to solving the Boltzmann equation for weakly rarefied gas . . . . .	121

7.2	Asymptotic kinetic schemes approximating the Euler and Navier-Stokes equations . . . . .	124
7.3	Schemes for flows at low Knudsen numbers . . . . .	131
<b>References</b>		<b>137</b>
<b>8</b>	<b>STUDY OF UNIFORM RELAXATION IN KINETIC GAS THEORY</b>	<b>139</b>
8.1	Spatially uniform (homogeneous) relaxation problem . . . . .	139
8.2	Obtaining the test solutions for isotropic relaxation . . . . .	140
8.3	Some examples of the relaxation problem solutions . . . . .	146
8.4	Uniform relaxation for gas mixtures . . . . .	148
<b>References</b>		<b>153</b>
<b>9</b>	<b>NONUNIFORM RELAXATION PROBLEM AS A BASIC MODEL FOR DESCRIPTION OF OPEN SYSTEMS</b>	<b>155</b>
9.1	Formulation of the problem and solution methods . . . . .	155
9.2	Nonclassical behavior of macroscopic parameters . . . . .	159
9.3	Behavior of the distribution function and macroscopic parameters . . . . .	164
9.4	Possible entropy decrease . . . . .	167
9.5	Some generalizations . . . . .	171
<b>References</b>		<b>179</b>
<b>10</b>	<b>ONE-DIMENSIONAL KINETIC PROBLEMS</b>	<b>181</b>
10.1	The problem of heat transfer . . . . .	181
10.2	Shock wave structure . . . . .	188
10.3	Flow in the field of an external force . . . . .	197
10.4	Recondensation of a mixture in a force field . . . . .	203
<b>References</b>		<b>207</b>
<b>11</b>	<b>MULTI-DIMENSIONAL PROBLEMS. STUDY OF FREE JET FLOWS</b>	<b>211</b>
11.1	Possibilities of direct integration approaches for studying multi-dimensional problems . . . . .	211
11.2	Formulation of the problem and numerical scheme . . . . .	212
11.3	Free plane jet . . . . .	214
11.4	Axisymmetric and three-dimensional free jet flows . . . . .	215
<b>References</b>		<b>225</b>

<b>12 THE BOLTZMANN EQUATION AND THE DESCRIPTION OF UNSTABLE FLOWS</b>	<b>227</b>
12.1 Main notions . . . . .	227
12.2 Boltzmann and Navier-Stokes description . . . . .	228
12.3 Mathematical apparatus . . . . .	230
12.4 Some results of numerical modelling . . . . .	231
<b>References</b>	<b>239</b>
<b>13 SOLUTIONS OF SOME MULTI-DIMENSIONAL PROBLEMS</b>	<b>241</b>
13.1 Unsteady problem of a shock wave reflection from a wedge .	241
13.2 Solution for focusing of a shock wave . . . . .	250
13.3 Study of flows in elements of cryovacuum devices . . . . .	254
13.4 Flows in the vacuum cryomodulus . . . . .	260
13.5 Two-component mixture flows with cryocondensation . . . .	263
<b>References</b>	<b>269</b>
<b>14 SPECIAL HYPERSONIC FLOWS AND FLOWS WITH VERY HIGH TEMPERATURES</b>	<b>271</b>
14.1 Special hypersonic flows . . . . .	271
14.2 Unsteady flows caused by a powerful point discharge of a finite gaseous mass . . . . .	274
14.3 Asymptotic solution at $t \rightarrow 0$ . . . . .	277
14.4 Numerical analysis. Asymptotic solution at $t \rightarrow \infty$ . . . . .	281
14.5 Scattering of impulsive molecular beam . . . . .	286
<b>References</b>	<b>293</b>
