

Contents

1 From the Foundations of Quantum Theory to Quantum Technology – an Introduction	
Gernot Alber	1
1.1 Early Developments	2
1.1.1 Entanglement and Local, Realistic Theories	2
1.1.2 Characteristic Quantum Effects for Practical Purposes	6
1.1.3 Quantum Algorithms	8
1.2 Quantum Physics and Information Processing	11
2 Quantum Information Theory – an Invitation	
Reinhard F. Werner	14
2.1 Introduction	14
2.2 What is Quantum Information?	15
2.3 Impossible Machines	17
2.3.1 The Quantum Copier	18
2.3.2 Joint Measurement	19
2.3.3 Bell’s Telephone	19
2.3.4 Entanglement, Mixed-State Analyzers and Correlation Resolvers	23
2.4 Possible Machines	25
2.4.1 Operations on Multiple Inputs	25
2.4.2 Quantum Cryptography	27
2.4.3 Entanglement-Assisted Teleportation	27
2.4.4 Superdense Coding	29
2.4.5 Quantum Computation	29
2.4.6 Error Correction	30
2.5 A Preview of the Quantum Theory of Information	31
2.6 Elements of Quantum Information Theory	34
2.6.1 Systems and States	34
2.6.2 Channels	39
2.6.3 Duality between Channels and Bipartite States	45
2.6.4 Channel Capacity	47
Comparison with the Classical Definition	50
Comparison with other Error Criteria	51

2.6.5 Coding Theorems	51
2.6.6 Teleportation and Dense Coding Schemes	53
3 Quantum Communication	
Harald Weinfurter and Anton Zeilinger	58
3.1 Introduction	58
3.2 Entanglement – Basic Features	60
3.3 The Quantum Communication Schemes	62
3.3.1 Quantum Cryptography	63
3.3.2 Quantum Dense Coding	66
3.3.3 Quantum Teleportation	68
The Idea	68
Some Remarks	70
3.4 The Experimental Prerequisites	73
3.4.1 Entangled Photon Pairs	74
3.4.2 Polarization-Entangled Pairs from Type II Down-Conversion ..	76
3.4.3 Interferometric Bell-State Analysis	79
The Principle	79
Bell-State Analysis of Independent Photons	81
3.4.4 Manipulation and Detection of Single Photons	82
3.5 Quantum Communication Experiments	83
3.5.1 Quantum Cryptography	83
3.5.2 Quantum Dense Coding	85
3.5.3 Quantum Teleportation of Arbitrary Qubit States	89
3.6 Outlook	93
4 Quantum Algorithms: Applicable Algebra and Quantum Physics	
Thomas Beth and Martin Rötteler	96
4.1 Introduction	96
4.2 Architectures and Machine Models	97
4.2.1 Quantum Networks	98
4.2.2 Boolean Functions and the Ring Normal Form	103
4.2.3 Embedded Transforms	104
4.2.4 Permutations	106
4.2.5 Preparing Quantum States	108
4.2.6 Quantum Turing Machines	109
4.3 Using Entanglement for Computation:	
A First Quantum Algorithm	113
4.4 Quantum Fourier Transforms: the Abelian Case	115
4.4.1 Factorization of DFT_N	116
4.4.2 Abelian Groups and Duality Theorems	117
The Dual Group	118
4.4.3 Sampling of Fourier Coefficients	119

4.4.4 Schur's Lemma and its Applications	
in Quantum Computing	120
4.5 Exploring Quantum Algorithms	122
4.5.1 Grover's Algorithm	122
4.5.2 Shor's Algorithm	124
Diophantine Approximation	127
4.5.3 Taxonomy of Quantum Algorithms	128
Entanglement-Driven Algorithms	128
Superposition-Driven Algorithms	129
4.6 Quantum Signal Transforms	129
4.6.1 Quantum Fourier Transforms: the General Case	129
The Wedderburn Decomposition	130
A Decomposition Algorithm	131
An Example: Wreath Products	133
Nonabelian Hidden Subgroups	135
4.6.2 The Discrete Cosine Transform	137
4.7 Quantum Error-Correcting Codes	140
4.7.1 Introduction	140
4.7.2 Background	141
4.7.3 A Classic Code	142
4.7.4 Quantum Channels and Codes	146
Quantum Channels	146
Quantum Codes	147
4.8 Conclusions	150
5 Mixed-State Entanglement and Quantum Communication	
Michał Horodecki, Paweł Horodecki and Ryszard Horodecki	151
5.1 Introduction	151
5.2 Entanglement of Mixed States: Characterization	153
5.2.1 Pure States	154
5.2.2 Some Necessary Conditions for Separability	
of Mixed States	155
5.2.3 Entanglement and Theory of Positive Maps	157
Positive and Completely Positive Maps	157
Characterization of Separable States via Positive Maps	159
Operational Characterization of Entanglement	
in Low Dimensions ($2 \otimes 2$ and $2 \otimes 3$ Systems)	160
Higher Dimensions – Entangled States	
with Positive Partial Transposition	161
Range Criterion and Positive Nondecomposable Maps	163
5.2.4 Examples	164
Reduction Criterion for Separability	165
Strong Separability Criteria from an Entanglement Witness ..	165
Werner States	165

Isotropic State	166
A Two-Qubit State	167
Entangled PPT State Via Nondecomposable Positive Map ...	167
5.2.5 Volumes of Entangled and Separable States	168
5.3 Mixed-State Entanglement as a Resource	
for Quantum Communication	170
5.3.1 Distillation of Entanglement:	
Counterfactual Error Correction	170
5.3.2 Distillation of Two-Qubit States	173
BBPSSW Distillation Protocol	173
All Entangled Two-Qubit States are Distillable	175
5.3.3 Examples	177
Distillation of Isotropic State for $d \otimes d$ System	177
Distillation and Reduction Criterion	177
5.3.4 Bound Entanglement	178
5.3.5 Do There Exist Bound Entangled NPT States?	181
5.3.6 Example	183
5.3.7 Some Consequences of the Existence	
of Bound Entanglement	183
Bound Entanglement and Teleportation	183
General Teleportation Scheme	184
Optimal Teleportation	184
Teleportation Via Bound Entangled States	185
Activation of Bound Entanglement	185
Conclusive Teleportation	185
Activation Protocol	187
Entanglement-Enhanced LOCC Operations	190
Bounds for Entanglement of Distillation	191
5.4 Concluding Remarks	193
References	197
Index	211
