

Fundamentals of Plasma Physics and Controlled Fusion

Kenro Miyamoto

Contents

Preface

1 Nature of Plasma	1
1.1 Introduction	1
1.2 Charge Neutrality and Landau Damping	1
1.3 Fusion Core Plasma	3
2 Plasma Characteristics	7
2.1 Velocity Space Distribution Function, Electron and Ion Temperatures	7
2.2 Plasma Frequency, Debye Length	8
2.3 Cyclotron Frequency, Larmor Radius	9
2.4 Drift Velocity of Guiding Center	10
2.5 Magnetic Moment, Mirror Confinement, Longitudinal Adiabatic Constant	12
2.6 Coulomb Collision Time, Fast Neutral Beam Injection	14
2.7 Runaway Electron, Dreicer Field	18
2.8 Electric Resistivity, Ohmic Heating	19
2.9 Variety of Time and Space Scales in Plasmas	19
3 Magnetic Configuration and Particle Orbit	21
3.1 Maxwell Equations	21
3.2 Magnetic Surface	23
3.3 Equation of Motion of a Charged Particle	24
3.4 Particle Orbit in Axially Symmetric System	26
3.5 Drift of Guiding Center in Toroidal Field	28
a Guiding Center of Circulating Particles	
b Guiding Center of Banana Particles	
3.6 Orbit of Guiding Center and Magnetic Surface	31
3.7 Effect of Longitudinal Electric Field on Banana Orbit	32
4 Velocity Space Distribution Function and Boltzmann's Equation	35
4.1 Phase Space and Distribution Function	35
4.2 Boltzmann's Equation and Vlasov's Equation	36
5 Plasma as Magnetohydrodynamic Fluid	39
5.1 Magnetohydrodynamic Equations for Two Fluids	39
5.2 Magnetohydrodynamic Equations for One Fluid	41
5.3 Simplified Magnetohydrodynamic Equations	42

5.4	Magnetoacoustic Wave	44
6	Equilibrium	47
6.1	Pressure Equilibrium	47
6.2	Equilibrium Equation for Axially Symmetric and Translationally Symmetric Systems ..	48
6.3	Tokamak Equilibrium	50
6.4	Poloidal Field for Tokamak Equilibrium	56
6.5	Upper Limit of Beta Ratio	58
6.6	Pfirsch-Schlüter Current	59
6.7	Virial Theorem	61
7	Diffusion of Plasma, Confinement Time	65
7.1	Collisional Diffusion (Classical Diffusion)	66
	a Magnetohydrodynamic Treatment	
	b A Particle Model	
7.2	Neoclassical Diffusion of Electrons in Tokamak	69
7.3	Fluctuation Loss, Bohm Diffusion, and Stationary Convective Loss	71
7.4	Loss by Magnetic Fluctuation	74
8	Magnetohydrodynamic Instabilities	77
8.1	Interchange, Sausage and Kink Instabilities	77
	a Interchange Instability	
	b Stability Criterion for Interchange Instability, Magnetic Well	
	c Sausage Instability	
	d Kink Instability	
8.2	Formulation of Magnetohydrodynamic Instabilities	85
	a Linearization of Magnetohydrodynamic Equations	
	b Energy Principle	
8.3	Instabilities of a Cylindrical Plasma	90
	a Instabilities of Sharp-Boundary Configuration: Kruskal-Shafranov Condition	
	b Instabilities of Diffuse-Boundary Configurations	
	c Suydam's Criterion	
	d Tokamak Configuration	
	e Reversed Field Pinch	
8.4	Hain-Lüst Magnetohydrodynamic Equation	102
8.5	Ballooning Instability	103
8.6	η_i Mode due to Density and Temperature Gradient	107
9	Resistive Instability	111
9.1	Tearing Instability	111
9.2	Resistive Drift Instability	115
10	Plasma as Medium of Electromagnetic Wave Propagation	121
10.1	Dispersion Equation of Waves in a Cold Plasma	121
10.2	Properties of Waves	124
	a Polarization and Particle Motion	
	b Cutoff and Resonance	
10.3	Waves in a Two-Components Plasma	126
10.4	Various Waves	129
	a Alfvén Wave	
	b Ion Cyclotron Wave and Fast Wave	
	c Lower Hybrid Resonance	
	d Upper Hybrid Resonance	

	e Electron Cyclotron Wave	
10.5	Conditions for Electrostatic Waves	134
11	Landau Damping and Cyclotron Damping	137
11.1	Landau Damping (Amplification)	137
11.2	Transit-Time Damping	140
11.3	Cyclotron Damping	140
11.4	Quasi-Linear Theory of Evolution in the Distribution Function	142
12	Wave Propagation and Wave Heating	145
12.1	Energy Flow	145
12.2	Ray Tracing	149
12.3	Dielectric Tensor of Hot Plasma, Wave Absorption and Heating	150
12.4	Wave Heating in Ion Cyclotron Range of Frequency	154
12.5	Lower Hybrid Wave Heating	157
12.6	Electron Cyclotron Heating	160
13	Velocity Space Instabilities (Electrostatic Waves)	163
13.1	Dispersion Equation of Electrostatic Wave	163
13.2	Two Streams Instability	164
13.3	Electron Beam Instability	165
13.4	Harris Instability	165
14	Instabilities driven by Energetic Particles	169
14.1	Fishbone Instability	169
	a Formulation	
	b MHD Potential Energy	
	c Kinetic Integral of Hot Component	
	d Growth Rate of Fishbone Instability	
14.2	Toroidal Alfvén Eigenmodes	176
	a Toroidicity Induced Alfvén Eigenmode	
	b Instabilities of TAE Driven by Energetic Particles	
	c Various Alfvén Modes	
15	Development of Fusion Researches	189
16	Tokamak	197
16.1	Tokamak Devices	197
16.2	Equilibrium	201
	a Case with Conducting Shell	
	b Case without Conducting Shell	
	c Equilibrium Beta Limit of Tokamaks with Elongated Plasma Cross Section	
16.3	MHD Stability and Density Limit	203
16.4	Beta Limit of Elongated Plasma	205
16.5	Impurity Control, Scrape-Off Layer and Divertor	206
16.6	Confinement Scaling of L Mode	210
16.7	H Mode and Improved Confinement Modes	212
16.8	Noninductive Current Drive	217
	a Lower Hybrid Current Drive	
	b Electron Cyclotron Current Drive	
	c Neutral Beam Current Drive	
	d Bootstrap Current	
16.9	Neoclassical Tearing Mode	226
16.10	Resistive Wall Mode	232

a	Growth Rate of Resistive Wall Mode	
b	Feedback Stabilization of Resistive Wall Mode	
16.11	Parameters of Tokamak Reactor	239
17	Non-Tokamak Confinement System	247
17.1	Reversed Field Pinch	247
a	Reversed Field Pinch Configuration	
b	MHD Relaxation	
c	Confinement	
d	Oscillating Field Current Drive	
17.2	Stellarator	251
a	Helical Field	
b	Stellarator Devices	
c	Neoclassical Diffusion in Helical Field	
d	Confinement of Stellarator Plasmas	
17.3	Open End Systems	260
a	Confinement Times in Mirrors and Cusps	
b	Confinement Experiments with Mirrors	
c	Instabilities in Mirror Systems	
d	Tandem Mirrors	
18	Inertial Confinement	269
18.1	Pellet Gain	269
18.2	Implosion	272
Appendix		
A	Derivation of MHD Equations of Motion	277
B	Energy Integral of Axisymmetric Toroidal System	281
B.1	Energy Integral in Illuminating Form	281
B.2	Energy Integral of Axisymmetric Toroidal System	283
B.3	Energy Integral of High n Ballooning Modes	288
C	Derivation of Dielectric Tensor in Hot Plasma	291
C.1	Formulation of Dispersion Relation in Hot Plasma	291
C.2	Solution of Linearized Vlasov Equation	292
C.3	Dielectric Tensor of Hot Plasma	293
C.4	Dielectric Tensor of bi-Maxwellian Plasma	296
C.5	Dispersion Relation of Electrostatic Wave	297
C.6	Dispersion Relation of Electrostatic Wave in Inhomogenous Plasma	298
Physical Constants, Plasma Parameters and Mathematical Formula		303
