

# Contents

CONTRIBUTORS .....	vii
<b>Nonlinear Optics of de Broglie Waves</b>	
<i>P. Meystre</i>	
I. Introduction .....	1
II. <i>s</i> -Wave Scattering .....	3
III. A Microreview of Manybody Theory .....	8
IV. Mean-Field Theory of Bose–Einstein Condensates .....	14
V. Four-Wave Mixing of de Broglie Waves .....	22
VI. Mixing of Optical and Matter Waves .....	37
VII. Acknowledgments .....	50
VIII. References .....	50
<b>Formation of Ultracold Molecules (<math>T \leq 200 \mu\text{K}</math>) via Photoassociation in a Gas of Laser-Cooled Atoms</b>	
<i>Françoise Masnou-Seeuws and Pierre Pillet</i>	
I. Introduction .....	54
II. Physical Concepts in Photoassociation and Formation of Molecules ..	57
III. Ultracold Molecule Experiments .....	80
IV. Theoretical Methods .....	100
V. Present Status of the Comparison between Experiment and Theory: Formation Rates .....	109
VI. New Schemes for Making Ultracold Molecules .....	116
VII. Conclusion .....	117
VIII. Acknowledgments .....	120
IX. References .....	120
<b>Molecular Emissions from the Atmospheres of Giant Planets and Comets: Needs for Spectroscopic and Collision Data</b>	
<i>Yukikazu Itikawa, Sang Joon Kim, Yong Ha Kim, and Y. C. Minh</i>	
I. Introduction .....	130
II. Spectroscopy of the Giant Planets: Needs for Spectroscopic and Collision Data .....	131
III. Spectroscopy of Comets .....	145
IV. Spectral Databases and Improvements Needed .....	155
V. Conclusions .....	157
VI. Acknowledgments .....	157
VII. References .....	157

**Studies of Electron-Excited Targets Using Recoil Momentum Spectroscopy with Laser Probing of the Excited State***Andrew James Murray and Peter Hammond*

I. Introduction .....	163
II. Atomic Deflection Using Electron Impact .....	167
III. Doubly Excited States Studied via the Fluorescence Decay Product: Recoiling Excited Atoms .....	182
IV. Stepwise Laser Probing of Deflected Metastable Targets .....	187
V. Conclusions and Future Experiments .....	199
VI. Acknowledgments .....	201
VII. References .....	202

**Quantum Noise of Small Lasers***J. P. Woerdman, N. J. van Druten, and M. P. van Exter*

I. Introduction .....	205
II. Overview of Threshold Behavior .....	207
III. Good-Cavity versus Bad-Cavity Regime .....	211
IV. Spontaneous Emission Factor $\beta$ .....	214
V. Cavity QED and $\beta$ .....	219
VI. Magnitude of $\beta$ .....	221
VII. Relaxation Oscillation .....	222
VIII. Disappearance of Fluctuation Threshold .....	227
IX. Petermann Excess Quantum Noise .....	236
X. Finite Number of Atoms .....	242
XI. Concluding Summary .....	244
XII. Acknowledgments .....	246
XIII. References .....	246
SUBJECT INDEX .....	249
CONTENTS OF VOLUMES IN THIS SERIES .....	261
