Preface	xxiii
Conference Photo	xxviii
List of Participants	xxix

I. INTRODUCTION

Binary Stars: Historical Milestones

H. Zinnecker

1. Welcome	1
2. Binary Stars – the Potsdam Connection	1
3. The Discovery of Binary Stars – a Retrospective	4
3.1. Classical Studies	4
3.2. Studies of Young Binaries	7
4. Binary Star Formation – a Brief History of Ideas	8
5. Binary Stars – Past, Present, and Future	10

II. THEORETICAL CONTEXT: THE BIG PICTURE

Formation of Wide Binaries by Fragmentation

P. Bodenheimer, A. Burkert

1. Introduction-Issues	13
2. Numerical Calculations	14
2.1. Initial Conditions	14
2.2. Is there a Criterion for Fragmentation?	15
2.3. Questions	16
3. Fragmentation: Results	17
4. Conclusions	19

The Formation of Close Binary Stars

I. A. Bonnell

1. Introduction	23
2. Overview of Formation Mechanisms	24
3. Fission	24
4. Capture	24
5. Fragmentation: Overview	26
6. Rotationally Driven Disk Fragmentation	27
7. Orbital Evolution	29
8. Summary	31

Impulsively Triggered Binary Star Formation

A. P. Whitworth

1. Introduction	33
2. Cloud/Cloud Collisions and the Formation of Multiple Protostellar Discs	34
3. Impulsive Interactions between Protostellar Discs	35
4. Conclusion	38

An Update on Binary Formation by Rotational Fission

J. E. Tohline, R. H. Durisen

1. Relevant Results up through the 1980s	40
2. Results from the Past Decade	41
2.1. Confirmation of Earlier Dynamic Barlike Mode Results	41
2.2. Investigation of Lebovitz's Hypothesis	42
3. Work to be Done	43

III. MAIN SEQUENCE BINARY STATISTICS

Binaries at the Bottom of the Main Sequence and below

M. Mayor, S. Udry, J.-L. Halbwachs, F. Arenou

1. Introduction	45
2. Large Radial-Velocity Binary Surveys	46
2.1. The CORAVEL G- and K-Dwarf Surveys	46
2.2. M-Dwarf Surveys	47
3. Orbital Elements Distributions of Companions to Solar-Type Stars	48
3.1. The $(e, \log P)$ Diagram	48
3.2. The Mass-Ratio Distribution: $f(q)$	49
3.3. The Period Distribution and Binary Frequency	51
4. The Mass Function below the Main Sequence	51
5. The Mass-Luminosity Relation at the Bottom of the Main Sequence	52

Ultra-Cool Very Low-Mass Binaries

E. L. Martin, G. Basri

1. Introduction	55
2. Searches for Ultra-Cool Binaries	56
3. Discoveries of Ultra-Cool Binaries	58
4. Properties of Ultra-Cool Binaries	59
5. Origins of Ultra-Cool Binaries	61

Binarity of Hipparcos Main Sequence Survey Stars

C. F. Quist, L. Lindegren

1. Introduction	64
2. Hipparcos Double Stars	65

3. Method	66
4. Results	66

Multiplicity of Massive Stars

T. Preibisch, G. Weigelt, H. Zinnecker

1. Introduction	69
2. Formation of Massive Stars	70
3. Observational Results on OB Star Multiplicity	71
3.1. Summary of Literature Results	71
3.2. General Conclusions on OB Star Multiplicity	71
4. Multiplicity of Massive Stars in the Orion Nebula Cluster	72
4.1. Known Companions to the 13 Orion OB Stars	73
4.2. Estimation of the True Number of Companions	73
4.3. Properties of the Multiple Systems	74
5. Conclusions	77

Wolf-Rayet Binaries

K. A. van der Hucht, B. Hidayat

1. Introduction	79
2. Recent Wolf-Rayet Binary Census	79
3. Wolf-Rayet Masses	80
4. More Wolf-Rayet Binaries?	81

Statistics of Multiple Stars: Some Clues to Formation Mechanisms

A. Tokovinin

1. Introduction	84
2. How to Measure Stellar Multiplicity	84
3. Overview of High-Multiplicity Statistics	85
3.1. Multiplicities	85
3.2. Period Statistics	87
3.3. Coplanarity	88
3.4. Mass Ratios	88
3.5. Eccentricities	89
4. Relation of Statistics to Formation/Evolution	90
4.1. Dissipative Kozai Evolution	90
4.2. Independent Multiplicity?	90
5. What Should Be Done?	91

Summary Talk: Implications of Binary Properties for Theories of Star Formation

R. B. Larson

1. Introduction	93
2. Basic Statistical Properties of Binaries	94
3. Implications for Theories of Star Formation	95

4. Effect of Companions on Disk Evolution	97
5. Understanding the Broad Period Distribution	98
6. Summary	102

IV. INITIAL CONDITIONS FOR BINARY FORMATION AND PROTOBINARY SYSTEMS

The Structure and Evolution of Dense Cores

G. A. Fuller

1. Introduction	107
2. The Formation of Cores	107
3. Evolution to Star Formation	108
3.1. Density Profile	108
3.2. Mass Distribution of Cores	109
3.3. Core Shapes	110
3.4. Observations of Infall	110
3.5. Angular Momentum	112
4. Dispersal of Cores	113
5. Conclusions and Implications for Binary Formation	114

Featured Object: Fragmentation of a Protostellar Core – the Case of CB 230

R. Launhardt

1. Motivation and Observations	117
2. Results	118
2.1. Morphology and Kinematics of the Double Core	118
2.2. Dust Continuum Emission from Embedded Disk(s)	119
2.3. The Outflow is Also Double	119
3. CB 230 in the Framework of Binary Star Formation	120

Turbulence and Cloud Angular Momentum

A. Burkert, P. Bodenheimer

1. Introduction-Observations	122
2. Construction of Turbulent Core Models	123
3. Results	126
3.1. Unevolved Cores	126
3.2. Evolved Cores	128
4. Conclusions	130

Featured Object: Twin, Aligned Protoplanetary Disks around the Components of the Young Binary System L1551 IRS5

J. M. Torrelles, L. F. Rodriguez, G. Anglada

1. Introduction	132
2. What Has Actually Been Observed in L1551	133

3. Nature and Properties of the Sources in L1551	134
4. General Comments	134

Observations of Protoplanetary Systems

L. Mundy, L. W. Looney, W. J. Welch

1. Introduction	136
2. The Morphology of Embedded Low Mass Systems	137
3. Fragmentation and Multiplicity	138
4. The Density Structure of Cores with YSO's	141
5. The Kinematics of Cores	143
6. Summary and the Future	144

V. PRE-MAIN SEQUENCE BINARY POPULATIONS

Multiplicity in T and OB Associations

R. Köhler, W. Brandner

1. Introduction	147
2. T Associations	147
2.1. Taurus-Auriga	147
2.2. Chamaeleon	148
3. OB Associations	149
3.1. OB Associations: Why and Where?	149
3.2. Scorpius-Centaurus: How Do Binaries Form (and Evolve)?	150
3.3. Results of Binary Surveys	151
3.4. Binary Properties: A Fossil Record of the Initial Physical Conditions in a Molecular Cloud?	152
4. Summary: What Have We Learned?	153

Herbig Ae/Be Visual Binaries

J. Bouvier, P. Corporon

1. Introduction	155
2. The Sample	155
3. Binary Statistics	156
4. Spectrophotometric Properties of the Binary Systems	159
5. Conclusions	163

A Spectroscopic and Photometric Survey for Pre-Main Sequence Binaries

*E. W. Guenther, V. Joergens, R. Neuhäuser, G. Torres, N. S. Batalha, J. Vijapurkar,
M. Fernández, R. Mundt*

1. Introduction	166
2. The Spectroscopic Survey	167
3. The Photometric Survey	168

VI. BINARY POPULATIONS IN YOUNG CLUSTERS

Binarity in the Orion Trapezium Cluster

M. J. McCaughrean

1.	Introduction	169
2.	The Orion Trapezium Cluster	170
3.	Observational Constraints	171
4.	Observational Techniques	171
5.	Observational Results	172
5.1.	Close Visual Binaries	172
5.2.	Extending to Wide Binaries	175
6.	Theoretical Considerations	177
7.	Summary and Outlook	178

The Properties of Open Cluster Binaries

Based on High-Resolution Imaging Surveys

J. Patience, G. Duchêne

1.	Introduction	181
2.	Detection Limits and Observed Samples	182
2.1.	Observational Techniques	182
2.2.	Samples	182
3.	Studies of the Individual Clusters	182
3.1.	Binary Fraction as a Function of Age	183
3.2.	Binary Fraction as a Function of Stellar Density	183
3.3.	Dynamical Evolution of Young Clusters	184
4.	Studies of the Combined Cluster Sample	185
4.1.	Observational Properties	185
4.2.	Comparisons with Binary Star Formation Models	187
4.3.	Effects of Companions on Stellar Properties	187
5.	Summary	189

Spectroscopic Binaries in Young Open Clusters

J.-C. Mermilliod, B. Garcia

1.	Introduction	191
2.	NGC 6231	192
3.	Binary Frequency of O-Type Stars in Galactic Open Clusters	192
3.1.	“Rich” Clusters ($N_o > 5$)	192
3.2.	“Poor” Clusters ($N \sim 1-2$)	193
4.	Other Clusters with O-Type Stars	195
5.	Conclusions	195

Binary Stars in Young Clusters – a Theoretical Perspective

P. Kroupa

1.	Introduction	199
2.	Origin of the Galactic Field Population	200

3. The Binary Star – Star Cluster Connection: Fundamentals	201
4. Forbidden Orbits — a Window to Stellar Evolution	206

Summary Talk: What Can Pre-Main Sequence Binary Star Populations Tell Us about Binary Formation Mechanisms?

A. M. Ghez

1. Introduction	210
2. Companion Star Fractions	211
3. Constraints on Star Formation Theories	213

VII. ENVIRONMENTS OF YOUNG BINARIES – DIRECT IMAGING

Interferometric Observations of Disks around PMS Binary Stars

A. Dutrey

1. Introduction	219
2. Observed Morphology of Material around Multiple T Tauri Systems	220
2.1. GG Tau: A Case Study?	220
2.2. UY Aur: A Common 0.9'' Binary?	221
2.3. UZ Tau: A Quadruple System?	221
3. Imaging Disks around Binaries with mm Arrays	222
4. Observed Properties at mm Wavelengths	224
4.1. Properties of Inner Circumstellar Disks	224
4.2. Properties of the Circumbinary Material	225
5. Summary	227

Featured Object: GG Tau – the Ringworld Revisited

S. Guilloteau, A. Dutrey

.....	229
-------	-----

Optical and Near-Infrared Imaging of Young Binary Star Environments

F. Ménard, K. Stapelfeldt

1. Introduction	234
2. Circumbinary Disks: GG Tau and UY Aur	235
2.1. UY Aur	235
2.2. GG Tau	237
3. Circumstellar Disks in Binary Systems	238
4. Envelopes, Outflows and Jets	241
4.1. T Tauri, the Prototype for Young Stellar Object Complexity	241
4.2. Large Envelopes: The Case of CoKu Tau/1	241
4.3. Mass Loss: RW Aurigae & XZ Tauri	242
5. Summary	243

Featured Object:**A Detailed Study of the GG Tau Circumbinary Disk***C.-E. McCabe, A. M. Ghez*

1. Introduction	245
2. Disk Detection & Morphology	246
3. Disk Photometry	247

Outflows from Newborn Multiple Stars*B. Reipurth*

1. Introduction	249
2. Multiplicity of Giant Outflow Sources	250
3. The Properties of Three-Body Interactions	251
4. Disk-Disk Interactions and Giant HH Bow Shocks	253
5. Orbital Decay and Highly Collimated Jets	254
6. Consequences for Binary PMS Evolution	256
7. The Case of the HH 111 Flow	259

Featured Object: Twisted Jets from L1551-IRS5*Y. Itoh*

1. Introduction	261
2. Observations	261
3. Results and Discussion	262
3.1. Two Jets of Ionized Iron	262
3.2. Extinction	263
3.3. The Twisted Structure	263

The Infrared Companions of T Tauri Stars:**Clues to the Formation and Early Evolution of Binaries***C. D. Koresko, C. Leinert*

1. Introduction	265
2. Properties of the Infrared Companions	266
2.1. Infrared Excess and Bolometric Temperature	266
2.2. Primary Stars	267
2.3. Spectral Properties	267
2.4. Photometric and Spectral Variability	268
2.5. Infrared Morphology	269
2.6. Radio Emission and Circumstellar Matter	269
3. The Nature of IRC Phenomenon	270
3.1. Are the IRCs Coeval with their Primaries?	270
3.2. Special Viewing Geometries	271
3.3. Disk Accretion	271
3.4. Episodic Accretion	272
3.5. Binary Separations	272
4. Implications for the Formation and Evolution of Binary Stars	272

Featured Object:**The Close Environment of Z CMa Binary System***P. J. V. Garcia*

1. Introduction	275
2. Spectroastrometry	275
3. Echelle Spectroastrometry of Z CMa	276

**Statistics of Binary and Multiple Young Stars
Observed by Lunar Occultations***A. Richichi*

1. Introduction	280
2. Lunar Occultations for Studies of Young Binary Stars	280
3. Database and Statistics	281
4. Concluding Remarks	282

**VIII. ENVIRONMENTS OF YOUNG BINARIES
– INDIRECT OBSERVATIONS****Disks in Young Binary Systems:
Unresolved Millimeter-Wave Observations***E. L. N. Jensen*

1. Introduction	285
2. Millimeter and Submillimeter Emission	286
2.1. Molecular Line Observations	286
2.2. Continuum Observations	286
3. Millimeter Flux as a Function of Binary Separation	286
3.1. The Observations	286
3.2. Disk Truncation	288
3.3. Infrared Fluxes and the Presence of Circumstellar Disks	290
3.4. Circumbinary Disks	291
4. Disk Masses	292
5. Implications for Planet Formation in Binary Systms	292
6. Conclusions	293

Pre-Main Sequence Binaries with Aligned Disks?*S. Wolf, B. Stecklum, T. Henning*

1. Introduction	295
2. The Method	297
2.1. The General Idea	297
2.2. Polarization Mechanisms	297
2.3. Inclination of Disks – Projection Effect	299
2.4. Influence of the Interstellar Polarization	301

3. Observations	302
3.1. The Sample	302
3.2. The Observing Strategy	302
4. Results	302
5. Conclusions	303

Doppler Imaging as a Test for Binary Star Formation Theories

K. G. Strassmeier

1. Introduction	305
2. The Idea	305
3. Testing the Inclination Sensitivity of Doppler Imaging	306
4. The Case of V824 Ara	309
4.1. Individual Doppler Maps	309
4.2. The Spin Inclinations of the Binary Components	311
5. Discussion and Summary	312

Correlations of Spectral Accretion Signatures in Young Binaries

L. Prato, J.-L. Monin

1. Introduction	313
2. Data	314
2.1. Samples	314
2.2. Criteria	314
2.3. Results	315
3. Correlations	316
4. Interpretation	319
5. Observational Predictions	321

First Results from a STIS Survey of Close Pre-Main Sequence Binaries in Taurus

S. J. Kenyon, P. Hartigan

1. Introduction	323
2. Observations	324
3. Analysis	324
4. Frequency of Mixed Pairs	328
5. Ages of Binary Components	329

Young Binary Stars in Taurus-Auriga

R. J. White, A. M. Ghez

1. Introduction	332
2. High Spatial Resolution Imaging and Spectroscopy	333
3. The Stellar Properties	334
4. Circumstellar Properties	336
4.1. Circumprimary and Circumsecondary Disks	336
4.2. Co-Regulation of Circumstellar Disks	337
5. Summary	338

Featured Object: Disk Clearing in the Young Binary AK Sco

E. L. N. Jensen

1. Introduction	342
2. Optical Variability	342
3. Disk Properties	343
4. Discussion and Conclusions	344

Summary Talk: What Can Observations of Young Binaries Tell Us about Binary Formation?

C. J. Clarke

1. Introduction	346
2. The Models	347
2.1. Capture	347
2.2. $N > 2$ Fragmentation	348
2.3. $N = 2$ Fragmentation	349
3. Resolving the Components	350
4. Synthesizing the Field – Are the Wide Binaries a Problem?	352

Photographic Intermezzo	354
--------------------------------------	------------

IX. THEORETICAL CONTEXT – DETAILED CALCULATIONS

Fragmentation and Star Formation in Turbulent Cores

R. I. Klein, R. Fisher, C. F. McKee

1. Introduction	361
2. Basic Questions to Be Addressed	362
3. The Key Role of Nonlinear Perturbations: A Numerical Experiment	363
4. Turbulent Low-Mass Molecular Cloud Cores: Initial Conditions	365
5. Results	366
6. Conclusions	369

Impact of Magnetic Fields on Fragmentation

A. P. Boss

1. Introduction	371
2. Observations of Pre-Collapse Clouds	372
3. Magnetic Cloud Collapse Calculations	373
4. Magnetic Field Approximations	375
5. 3D Magnetic Tension Models	377
6. Conclusions	378

Can Disks Produce Companions by Gravitational Fragmentation?

R. H. Durisen

1. Why Ask the Question?	381
2. Recent Results	382
2.1. The Dynamic 90's	382
2.2. Thermal Physics Rules	382
2.3. To GGPP or Not to GGPP?	384
2.4. Heating, Cooling, and the Third Spatial Dimension	386
2.5. Resisting Temptation	388
3. Past, Present, and Future	388
3.1. Conclusions to Date	388
3.2. Proceed with Caution!	389
3.3. Is There Hope?	389

Filament Fragmentation

S. Inutsuka, T. Tsuribe

1. Introduction	391
2. The Formation of Filaments	392
3. The Evolution of Filaments	393
4. The Characteristic Mass of Fragmentation	395
5. Mass Function of Molecular Cloud Cores	397
6. Mean Surface Density of Companions	398

Outflow from Protostars and Angular Momentum Transfer

K. Tomisaka

1. Introduction	401
2. Numerical Method and Model	402
3. Run-Away Collapse Stage	402
4. Accretion Stage	402
5. Angular Momentum Transfer	404

Tidally-Induced Angular Momentum Transport in Disks

C. E. J. M. L. J. Terquem

1. Angular Momentum Exchange between the Disk Rotation and the Orbital Motion	406
2. Angular Momentum Transport by Density Waves	407
3. Angular Momentum Transport by Bending Waves	408
4. Conclusion	408

Angular Momentum Transport and Dynamo Effect in Kepler Disks

G. Rüdiger, U. Ziegler

1. Angular Momentum Transport	410
2. Shear Flow Dynamo of a Differentially Rotating Sphere	411
3. Local Simulations of a Differentially Rotating Keplerian Disk	412

X. EVOLUTION OF YOUNG BINARY SYSTEMS

Featured Object: A Brief Introduction to DQ Tau

K. G. Stassun

1. Introduction	415
2. Observed Properties of DQ Tau	415
2.1. A “Classical” Classical T Tauri Star?	415
2.2. A CTTS SB2 - not so Typical after all!	415
3. A Clue: Periodic “Accretion Events” in DQ Tau	416
3.1. Periodic Photometric Brightenings	416
3.2. Periodic Spectroscopic Emission/Veiling	417
4. DQ Tau: Exemplar for Orbitally Driven Accretion in Close Binaries	417

Accretion onto Pre-Main Sequence Binary Stars: The Circumstellar Environment

R. D. Mathieu

1. Introduction	419
2. Case Studies: Challenges for Disk-Clearing Theory	421
2.1. Challenge 1: UZ Tau E	421
2.2. Challenge 2: DQ Tau	422
2.3. Summary	423
3. Probing the Binary Environment with Gas Emission	423
4. Modeling Inner Disk Conditions	426
5. Conclusions	427

Accretion and the Properties of Protobinary Systems

M. R. Bate

1. Introduction	429
2. The Evolution of Accreting Protobinary Systems	430
2.1. The Quantitative Effects of Accretion	430
2.2. A Protobinary Evolution Code (PBE Code)	431
3. Observational Implications: Isolated Star Formation	434
3.1. Mass Ratio Distributions	434
3.2. Circumstellar Discs	435
3.3. Circumbinary Discs	435

4. Observational Implications: Clustered Star Formation	436
4.1. Mass Ratio Distributions	437
4.2. Circumstellar Material	437
5. Conclusions	437

Early Orbital Evolution of Binaries: Overview and Outlook

P. Artymowicz, S. H. Lubow

1. Introduction	439
2. Binary → Disk Interaction	440
2.1. Eccentric Binaries and the Mass Transfer	440
2.2. Time-Dependent Streaming through the Gap	440
2.3. Non-Coplanar and 3-D Disks	442
3. Disk → Binary Interaction	443
3.1. Orbital Migration	444
3.2. Eccentricity: Damped or Pumped up?	444
4. Conclusions	445

XI. YOUNG BINARIES AND STELLAR ASTROPHYSICS

Featured Object:

The Intriguing PMS Eclipsing (Triple) System TY CrA

L. P. R. Vaz

1. Introduction	449
2. Analysis	449
2.1. Non-Eclipse Variability	449
2.2. Rotational Velocity and Tertiary Component	450
3. Evolutionary Status	451
4. Discussion	451

Measuring the Masses of Young Stars

M. Simon

1. Introduction	454
2. Dynamical Methods of Mass Measurement	455
3. Application to Young Visual Binaries and Spectroscopic Binaries	456
4. Masses of Stars with Circumstellar Disks	457
5. Summary and Future Work	460

Featured Object:

A Relative Age Test of Pre-Main Sequence Evolutionary Models Based on the Young Quadruple System GG Tauri

R. J. White

1. Introduction	464
2. The Stellar Properties of GG Tau	465
3. A Test of PMS Evolutionary Models	465

Featured Object: The PMS Eclipsing Binary RXJ 0529.4+0041

*E. Covino, S. Catalano, A. Frasca, E. Marilli, J. M. Alcalá, M. Fernández,
C. Melo, R. Paladino, B. Stelzer*

1. Introduction	468
2. Observations	469
3. Preliminary Orbit Solution	469
4. Evolutionary Status	470

Testing Pre-Main Sequence Models with Young Binaries

F. Palla

1. Tests of PMS Evolutionary Tracks	472
2. Estimating Stellar Masses: Single Stars	474
3. Estimating Stellar Masses: PMS Binary Stars	475
4. Conclusions	479

XII. INVITED DEBATE: THE STATUS OF PMS TRACKS

Pre-Main Sequence Models for Low-Mass Stars and Brown Dwarfs

I. Baraffe, G. Chabrier, F. Allard, P. Hauschildt

1. Introduction	483
2. Pre-Main Sequence Models	484
2.1. Evolutionary Tracks	484
2.2. Improvement and Uncertainties	485
3. Comparison with Observations	488
4. Conclusion	490

A Dialogue on Dynamical Pre-Main Sequence Tracks

G. Wuchterl

A Fictional but Scientific Debate	492
---	-----

Unresolved Pre-Main Sequence Binaries in the HR Diagram

P. Hartigan, S. Kenyon

1. Introduction	496
2. Results	497
2.1. Case 1: Equal Components	497
2.2. Case 2: Different Components, Faint Secondary	497
2.3. Case 3: Different Components, Bright Secondary	499
2.4. Case 4: Different Components, Differing Reddening Procedures	499
3. Summary	500

The Effect of Unresolved Binaries on the Low-Mass IMF

O. Malkov, H. Zinnecker

1. Monte Carlo Simulations	501
2. Comparison with Observations	502
3. Conclusions	503

Fun for Two

S. F. Portegies Zwart, L. R. Yungelson, G. Nelemans

1. Introduction	505
2. Galaxy Models without Binaries	505
3. Galaxy Models with Binaries	506
4. Binary Evolution	508
5. Why Are the Models so Different?	509

XIII. PLANET FORMATION IN BINARY SYSTEMS

Planet Formation in Binary Systems

W. Kley

1. Planets in Binary Stars	511
2. Influence of Companions on Disks	512
3. On the Formation of Planets in Tidally Perturbed Disks	512
3.1. Planetesimal Disk	513
3.2. The Case of L 1551	513
3.3. Stability of Orbits	514
3.4. The Evolution of an Embedded Planet in a Binary Star	516
3.5. Planet Formation in Circumbinary Disks	516
4. Summary and Outlook	517

Comparison between Extrasolar Planets and Low-Mass Secondaries

T. Mazeh, S. Zucker

1. Introduction	519
2. Eccentricity and Period Distribution	521
3. The Mass Distribution of the Planet Candidates and the Low-Mass Secondaries	523
4. Metallicity	525
5. Conclusion	526

XIV. FRONTIERS OF OBSERVATIONS

Microlensing: A Tool to Probe Distant Binary Populations

R. Di Stefano

1. Introduction	529
2. Gravitational Microlensing	530
3. Monitoring Many Stars	531
4. Binary Lenses	532
4.1. Most of the Lenses May Be Binaries	533
4.2. The Magellanic-Cloud Events	533
4.3. A Puzzle and a Challenge	534
5. Ongoing and Future Observations	534
6. Planets	534
7. Variability	535
8. Disks	536
9. The Future	537

Optical and Infrared Long-Baseline Interferometry: Application to Binary Star Science

A. Quirrenbach

1. Introduction	539
2. Observations with an Interferometer	539
3. Combination of Interferometry with other Methods	540
4. Stellar Masses and Tests of Evolutionary Models	542
5. Low-Mass and Sub-Stellar Companions	543
6. Pre-Main Sequence Binaries	544
7. Conclusions	545

The Future of mm/submm Interferometry: The ALMA Project

S. Guilloteau

1. Introduction	547
2. The ALMA Project	548
3. ALMA and Multiple Stellar System Formation	550
4. ALMA Development and Calendar	553

Adaptive Optics Imaging of Faint Companions: Current & Future Prospects

L. M. Close

1. Introduction	555
2. Observational Procedure to Detect Faint Companions with AO & an Example Result with MWC480	556
3. The Future: High Spatial & Low Spectral Resolution with AO	558
4. Conclusions	558

**Future Opportunities in Young Binary Star Research
with Space Observatories***K. Stapelfeldt*

1. Introduction	559
2. Current Facilities	559
3. Upcoming Infrared Space Observatories	560
4. Upcoming Space Astrometry Missions	562

Numerical Hydrodynamics: SPH versus AMR*T. Plewa*

1. From Henyey to SPH and AMR	563
2. New Computers Required	564
3. A Few Critical Comments	565

Frontiers of Radiative Transfer*T. Henning*

1. Introduction	567
2. Radiative Transfer – More Dimensions	568
3. Radiative Transfer – More Physics	569
4. Conclusions and Outlook	570

XV. HIGHLIGHTS AND FAREWELL**Impressions of IAU 200***R. Ebert*
