

Table of Contents

Preface	xix
Session I: Global Structure and Evolution of the Solar Interior	
The New Era in Helioseismology	3
<i>D. O. Gough (invited)</i>	
A New Class of Solar Oscillation Measurements	21
<i>J. Schou (invited)</i>	
Recent Progress in Solar or Stellar Interior Modelling	29
<i>S. Turck-Chièze (invited)</i>	
Interior Solar-Cycle Changes Detected by Helioseismology	40
<i>R. Howe, F. Hill, R.W. Komm, J. Christensen-Dalsgaard, R. Munk Larsen, J. Schou, M. J. Thompson, and J. Toomre</i>	
Solar Metal Abundance Inferred from Helioseismology	43
<i>M. Takata and H. Shibahashi</i>	
Solar Model with Metal-enhanced Convective Envelope	46
<i>J. Y. Yang, Y. Li and H. Y. Xu</i>	
Recent Progress in Asteroseismology	50
<i>J. Christensen-Dalsgaard (invited)</i>	
Convective Overshooting to Drive g-Modes in γ Dor Stars	62
<i>Y. Li</i>	
Variations of the Solar Spectral Irradiance	66
<i>S. K. Solanki, M. Fligge, and Y. C. Unruh (invited)</i>	
Stellar Irradiance Variations	78
<i>R. R. Radick (invited)</i>	
Measurements of the Apparent Solar Diameter with Astrolabe at Observatório Nacional—1997/2000	86
<i>A. H. Andrei, E. Reis Neto, J. L. Penna, W. G. de Almeida, V.A. d'Ávila, S. P. Puliaev and E. G. Jilinski</i>	
Asteroseismology of the Rapidly Oscillating Ap Stars	90
<i>L. Bigot</i>	
Structure of Procyon A by a Seismological Approach	94
<i>M. P. Di Mauro and J. Christensen-Dalsgaard</i>	
An Estimation of Global p-mode Frequencies and Splitting from the IRIS Network Data: 1989-1996	97
<i>Sh. A. Ehgamberdiev, A. V. Serebryanskiy, Sh. S. Khalikov, E. Fossat, B. Gelly and IRIS team</i>	

MDI-SOHO Measures of Solar Radius Variation	101
<i>M. Emilio, J. R. Kuhn, R. I. Bush, and P. Scherrer</i>	
VIRGO Radiometry and Total Solar Irradiance 1996-2000 Revised	105
<i>C. Fröhlich and W. Finsterle</i>	
New Insight in Sounding the Solar Interior	111
<i>S. Godier and J.-P. Rozelot</i>	
Towards a Generalization of a Mixing-length Model for Nonradially Pulsating Stars: Convection in a Shear	115
<i>G. Houdek and D.O. Gough</i>	
Quadrupole Mode of the Sun's	
Poloidal Magnetic Field: on the Possibility of Exciting by Turbulent Dynamo Mechanism	118
<i>V. N. Kryvodubskyj</i>	
Search for p-mode Frequencies on Procyon A	121
<i>M. Martic, J. C. Lebrun, J. Schmitt and J. L. Beraux</i>	
Observations of Hysteresis Between Flare Index and Some Solar Indices	
<i>A. Özgür and T. Ataç</i>	125
Session II: Convection Zone and Local Area Helioseismology	
Turbulent Convection and Subtleties of Differential Rotation Within the Sun	131
<i>J. Toomre, A. Sacha Brun, M. DeRosa, J. R. Elliott and M. S. Miesch (invited)</i>	
The Solar Dynamo: Old, Recent, and New Problems	144
<i>A. Brandenburg (invited)</i>	
Vorticity, Current Helicity and Alpha-effect for Magnetic-driven Turbulence in the Solar Convection Zone	152
<i>G. Rüdiger</i>	
Magnetic Pumping at the Base of the Solar Convection Zone	156
<i>S. M. Tobias, N. H. Brummell, and J. Toomre</i>	
New Developments in Local Area Helioseismology	159
<i>T. L. Duvall Jr. and A. G. Kosovichev (invited)</i>	
Seismic Holography of the Solar Interior and Far Side	167
<i>D. C. Braun and C. Lindsey</i>	
Waves in the Magnetised Solar Atmosphere	170
<i>C. S. Rosenthal, M. Carlsson, V. Hansteen, A. McMurry, T. J. Bogdan, S. McIntosh, Å. Nordlund, R. F. Stein, and S. B. F. Dorch</i>	
Generation of the Solar Subsurface Shear	173
<i>K. L. Chan</i>	

New Inferences on the Sun from High-degree Modes: the External Layers and the Equation of State	177
<i>M. P. Di Mauro and J. Christensen-Dalsgaard</i>	
Towards a Wave Theory Interpretation of Time-Distance Helioseismology Data	180
<i>A. C. Birch and A. G. Kosovichev</i>	
Spatially-resolved Analysis of the the Upper Convection Zone	183
<i>R. S. Bogart, J. Schou, S. Basu, D. A. Haber, F. Hill, and H. M. Antia</i>	
Convective Pumping of Magnetic Fields: On the Flux Storage Problem for Solar-like Dynamos	186
<i>S. B. F. Dorch and Å. Nordlund</i>	
Probing Surface Flows and Magnetic Activity with Time-Distance Helioseismology	189
<i>L. Gizon, T. L. Duvall Jr., and R. M. Larsen</i>	
Comparision of Observed and Theoretical Amplitudes of Oscillations above granules and intergranular lanes	192
<i>E. V. Khomenko</i>	
Density Stratification Effects on the Thermal Convection in a Rotating Spherical Shell	195
<i>N. Nishikawa and K. Kusano</i>	
Improved MLT and Its Applications to Solar Models	198
<i>Y. Li and J. Y. Yang</i>	
Nonlinear Modeling of the Solar Tachocline	202
<i>M. S. Miesch</i>	
Photospheric Flow Fields and Properties of Embedded Small-scale Magnetic Flux Concentrations	205
<i>S. P. Rajaguru, R. Srikanth and S. S. Hasan</i>	
Effect of a Steady Flow and an Atmospheric Magnetic Field on the Solar p- and f-Modes	208
<i>R. Erdélyi and Y. Taroyan</i>	
Subsurface Flows with Advancing Solar Cycle Using Dense-Pack Ring-Diagram Analyses	211
<i>D. A. Haber, B. W. Hindman, J. Toomre, R. S. Bogart and F. Hill</i>	
Fractional Frequency Shifts of Local Helioseismic Modes With Magnetic Activity Using Ring-Diagram Analysis	215
<i>B. Hindman, D. Haber, J. Toomre, and R. S. Bogart</i>	
Flux Separation in Photospheric Magnetoconvection	219
<i>N. O. Weiss & M. R. E. Proctor</i>	

Session III: Active Region Structure and Dynamics	
The Emergence of Magnetic Flux in Active Regions	225
<i>W. P. Abbett, G. H. Fisher and Y. Fan</i>	
Stellar Prominences	229
<i>A. Collier Cameron (invited)</i>	
Soft X-ray Flares and Magnetic Configuration in Solar Active regions	237
<i>H. Zhang</i>	
Chromospheric Heating in the Late Gradual Flare Phase	241
<i>A. Czaykowska and D. Alexander</i>	
Long Period Oscillations in Polar Plumes as observed by CDS on SoHO	244
<i>D. Banerjee, E. O'Shea, J. G. Doyle, and M. Goossens</i>	
Flare Occurrence in the Solar Active Regions with Reversed Helicity Sign	247
<i>S.D. Bao, G.X. Ai, and H.Q. Zhang</i>	
Active Longitudinal Structures of the Sun from MDI and EIT Observations	251
<i>E. E. Benevolenskaya, A. G. Kosovichev and P. H. Scherrer</i>	
Magnetic Splitting of Molecular Lines in Sunspot	254
<i>S. V. Berdyugina, C. Frutiger, and S. K. Solanki</i>	
The Observation and Study of Two Prominence Events in the Infrared	257
<i>W. D. Cao, B. X. Ye, and W. Livingston</i>	
Spectroscopic features in the EUV emission of a M8 flare observed by SUMER	260
<i>W. Curdt, E. Landi, U. Feldman, D. Innes¹, B. Dwivedi, and K. Wilhelm</i>	
Spectroscopic Signatures of a Flare Observed by SUMER Onboard SOHO	264
<i>I. E. Dammasch, W. Curdt, B. Kliem, B. N. Dwivedi, K. Wilhelm</i>	
Magnetic Shear and Nonpotential Energy Evolution of Solar Minimum and the Onset of Solar Cycle 23	267
<i>J. Dun, H. Zhang, B. Zhang, and R. Li</i>	
A Cylindrical Formulation of Force Free Magnetic Fields	270
<i>E. A. Evangelidis and G. J. J. Botha</i>	
Formation of Arching Flux Tubes at the Base of the Solar Convection Zone	273
<i>Y. Fan</i>	
EUV Line Intensities and the Magnetic Field in Solar Active Regions	276
<i>J. Ireland and A. Fludra</i>	
Active Region Evolution and Flare Activities: From the Photosphere to the Corona	280
<i>T. T. Ishii, H. Kurokawa, and T. T. Takeuchi</i>	

Solar Flare Observations at Submm-waves	283
<i>P. Kaufmann, J-P. Raquin, E. Correia, J. E. R. Costa, C. Guillermo Giménez de Castro, A. V. R. Silva, H. Levato, M. Rovira, C. Mandrini, R. Fernández-Borda, and O. Bauer</i>	
The formation of G-band bright points I: Standard LTE modelling	287
<i>D. Kiselman, R. J. Rutten, and B. Plez</i>	
A Survey of the Size-flux Relation for Pores and Spots	291
<i>W. Li, G. Ai and H. Wang</i>	
Magnetic Configuration and Evolution in a Solar Active Region	294
<i>Y. Liu and H. Zhang</i>	
Oscillations in the Regions of Evershed Flows	297
<i>D. V. Makarchik and N. I. Kobanov</i>	
Velocities in Sunspot Plumes	300
<i>P. Maltby, O. Kjeldseth-Moe and N. Brynildsen</i>	
Three Dimensional Image Reconstruction of An H α Flare	303
<i>Z. Q. Qu, Y. C. Jiang, T. Luan and Z. Xu</i>	
SUMER/SOHO Observations of Long Period Oscillations in an Active Region Filament	307
<i>S. Régnier, J. Solomon, J. C. Vial</i>	
The Relationship between CMEs and Prominence Eruptions	310
<i>B. Schmieder, L. van Driel-Gesztelyi, C. Delannée, G. M. Simnett , and J. E. Wiik</i>	
CDS UV Brightenings Explained by Quasi-separatrices and Bald Patches in an S-shape active region	314
<i>B. Schmieder, P. Démoulin, L. Fletcher, M. C. López Fuentes, C. H. Mandrini, H. E. Mason, P. R. Young, and N. Nitta</i>	
Origin of Universal Correlation between Temperature and Emision Measure for Solar/Stellar Flares	318
<i>K. Shibata, and T. Yokoyama</i>	
Resonant Transmission of Magneto-atmospheric Waves in Sunspot Umbrae	320
<i>J. Staude, J. Rendtel and A. Settele</i>	
The Most Important Origin of Twist and Tilt of Magnetic Fields in Solar Active Regions	324
<i>L. Tian, H. Zhang and S. Bao</i>	
Magnetic Field Reconstruction in a Solar Active Region	328
<i>H. Wang, Y. Yan, and T. Sakurai</i>	
Flare-CME Events Associated With a Superactive Region	331
<i>J. Wang, J. Zhang, T. Wang, C. Zhang, Y. Liu, N. Nitta and G. L. Slater</i>	
Evolution of the Filament and the Eruption of the Two-Ribbon Flare on MAY 13, 1981	334
<i>A. A. Xu, G. P. Wu, and Y. H. Tang</i>	

On the Initial Phase of Solar Radio Burst Event on 23 September 1998	338
Y. Yan, Q. Fu, H. Aurass, S. Lesovoi, A. Altyntsev, Y. Liu, Z. Chen and H. Ji	
Solar Flares and Related Coronal Magnetic Field Structures in NOAA 8100	341
Y. Yan	
Observation of Reconnection Inflow of a Solar Flare	344
T. Yokoyama, K. Akita, T. Morimoto, K. Inoue, and J. Newmark	
The Opening of EUV Loops	347
J. Zhang and J. Wang	
Session IV: Structure and Dynamics of the Transition Region and Corona	
MHD Seismology of the Solar Corona with SOHO and TRACE	353
V. M. Nakariakov	
Looking for the FIP Effect in EUV Spectra	356
B. N. Dwivedi, E. Landi, and A. Mohan	
Transition Region Blinkers	359
C. E. Parnell, D. Bewsher, R. A. Harrison and A. W. Hood	
Source Regions of Coronal Mass Ejections	362
K. P. Dere and P. Subramanian (<i>invited</i>)	
Flare and CME onset: UV spectra show fast 3-D flow	374
D. E. Innes	
An Analysis of the Solar Rotation Velocity by Tracing Coronal Features	377
R. Brajša, B. Vršnak, V. Ruždjak, D. Roša, D. Hržina, H. Wöhl, F. Clette, and J.-F. Hochedez	
The Quiet-Sun Variability as seen by CDS and by SUMER	381
A. Brković, S. K. Solanki, and I. Rüedi	
Computed vs. Observed Lines Profiles of Metallic Atoms in Prominences	384
D. Cirigliano, M. Rovira, P. Mauas, and G. Stenborg	
Cyclic Variation in the Solar Lower Atmosphere	387
C. Fang, Y. X. Zhang, M. D. Ding, and W. C. Livingston	
DEM Study of Selected Quiet Sun Regions	390
C. Gontikakis, E. Landi, H. C. Dara, C. E. Alissandrakis, and J.-C. Vial	
Magnetic Field Structure of the CME Source Region	393
Y. Hanaoka	
Anomalous Line Shifts on the SOHO/CDS NIS Detector	396
S. V. H. Haugan	
Statistical study of solar eruptive events observed with Nobeyama Radioheliograph at 17 GHz	401
K. Hori	

Solar Polar Rays Are Not Polar	404
J. Li, D. Jewitt, B. LaBonte, and L. Acton	
Electron Density Enhancement During an UV Explosive Event	407
M. S. Madjarska, J. G. Doyle and L. Teriaca	
Plasma Parameters of a Prominence Observed on October 16/17 1999 by SUMER and CDS/SOHO	410
M. S. Madjarska, J.-C. Vial, K. Bocchialini, and V. N. Dermendjiev	
Properties of Different Coronal Streamers	413
S. Parenti, B. J. I. Bromage, G. Poletto, G. Noci, J. C. Raymond, and G. E. Bromage	
Statistical Features of the Quiet Sun in EUV	416
A. Pauluhn, S. K. Solanki, I. Rüedi, E. Landi, and U. Schühle	
Oscillations Observed in Intensity and Velocity for a Quiescent Prominence	419
K. Bocchialini, A. Costa, G. Domenech, M. Rovira, and J.-C. Vial	
CME Properties and Fuzzy Classification	422
Y. H. Tang and Z. Z. Han	
SUMER Observations of the Solar Transition Region: Spatial and Tem- poral Behaviour	425
L. Teriaca, J. G. Doyle, and D. Banerjee	
A Comparison of Coordinated TRACE and EIT Observations	428
M. Zhang	
TRACE Emission Heights Estimated From TRACE Limb Observations	431
M. Zhang	
Helical Magnetic Structure of White Light Polar Plumes	434
A. N. Zhukov, I. S. Veselovsky, S. Koutchmy, and A. Llebaria	
Possible Magnetic Activity Cycles of Four Chromospherically Active Bi- naries: ER Vul, UV Psc, AR Lac and BH Vir	437
S. B. Qian	
Reconstruction of the Coronal Magnetic Field for Active Region NOAA 8151	441
S. Régnier and T. Amari	
Session V: Coronal Heating and Solar Wind Acceleration	
Observations and Models of the Fast and Slow Solar Wind	447
E. Marsch (<i>invited</i>)	
Observations and Models of Coronal Heating	456
F. Malara and M. Velli (<i>invited</i>)	
Coronal Heating by MHD Waves: Results from the SECIS Instrument during the 1999 Eclipse	467
K. J. H. Phillip, P. T. Gallagher, D. R. Williams, F. P. Keenan, P. Rudawy, B. Rompolt, and A. Berlicki	

Heating the Quiet Corona by Nanoflares: Evidence and Problems	471
A. O. Benz and S. Krucker	
Stellar Coronae	475
J.H.M.M. Schmitt (<i>invited</i>)	
A Spectroscopic Study of the Solar Corona from Norikura and SOHO data	488
K. P. Raju, T. Sakurai and K. Ichimoto	
Nonlinear Evolution of Phase-mixed Alfvén Waves Towards Short Length Scales	492
M. Goossens ¹ and Y. Voitenko	
Coronal Heating and the Solar Wind Acceleration	495
T. Hirayama	
Mechanisms for Coronal Mass Supply by Evaporative Micro-Events	498
J. C. Brown, S. Krucker, M. Güdel, and A. O. Benz	
Long Term Variations in the Extreme UV Corona: the EIT/SoHO perspective	501
J-F. Hochedez, F. Clette, E. Verwichte, D. Berghmans, and P. Cugnon	
The Temperature of The Extended Solar Corona	505
C. R. Foley J. L. Culhane, and D. MacKay	
Non-ideal MHD Properties of Photospheric Flux Tubes	508
J. Kleimann and G. Hornig	
Parametric Instability of a Broad-band Alfvén Wave: Nonlinear Evolution and Saturation	511
F. Malara, L. Primavera and P. Veltri	
An Observational Test for Solar Atmospheric Heating	514
L. van Driel-Gesztelyi, P. Démoulin, J. Ireland, B. Thompson, A. Fludra, K. Oláh, Zs. Kővári, L. K. Harra, C. H. Mandrini, K. Bocchialini and S. Orlando	
Nonlinear Damping of Fast Waves and Plasma Heating in the Solar Corona	517
Y. Voitenko and M. Goossens	
Collaborative VLA and LASCO Observations of Nonthermal Energy Release in the Corona	520
R. F. Willson	
Session VI: The Solar Wind and Heliosphere	
Highlight Results from Ulysses	525
R. G. Marsden (<i>invited</i>)	
Solar Wind and Heliospheric Compositional Variations	533
A. B. Galvin (<i>invited</i>)	
Magnetic Cloud as a Dual-Polarity Flux Rope	541
M. Vandas and A. Geranios	

Wave Induced Synergetic Electron Acceleration in Inhomogeneous Solar Plasmas	544
M. P. Leubner	
Particle Acceleration on the Sun and in the Heliosphere	547
E. Roelof (<i>invited</i>)	
Particle Acceleration in Collisionless Magnetic Reconnection	555
P. K. Browning and G. E. Vekstein	
Collisionless Reconnection in the Structure and Dynamics of Active Regions	558
B. V. Somov, T. Kosugi, Y. E. Litvinenko, T. Sakao, S. Masuda, S. A. Bogachev, A. V. Oreshina and E. Y. Merenkova	
Isotopic Fractionation in Slow and Coronal Hole Associated Solar Wind	562
H. Kucharek, B. Klecker, F. M. Ipavich, R. Kallenbach, H. Grünwaldt, M. R. Aellig and P. Bochsler	
Solar Orbiter, a High-Resolution Mission to the Sun and Inner Heliosphere	565
E. Marsch, E. Antonucci, P. Bochsler, J.-L. Bougeret, B. Fleck, R. Harrison, R. Marsden, R. Schwenn and J.-C. Vial	
Propagation of High Energy Electrons in Solar Plasma	570
V. Mel'nik	
Improved Analysis of COMPTEL Solar Neutron Data, with Application to the 15 June 1991 Flare	573
M. P. Toner, J. M. Ryan, A. L. MacKinnon, D. Bhattacharya, K. P. Macpherson, M. L. McConnell, G. Rank, A. M. Thompson and T. O'Neill	
Shock Drift Electron Acceleration and Pitch Angle Scattering	577
M. Vandas	
IPS Observations at Miyun Station, BAO	580
X. Z. Zhang and J. H. Wu	
Session VII: Energetic Particles and the Local Interstellar Medium	
Heliospheric Magnetic Field Configuration and its Coronal Sources	585
T. H. Zurbuchen (<i>invited</i>)	
Components of the Local Interstellar Medium	595
J. L. Linsky, S. Redfield, and B. Wood	
HST Observations of Heliospheric and Astrophysical Ly α Absorption Toward the α Cen System	599
B. E. Wood, J. L. Linsky and J. A. Valenti	
The Influence of Solar Activity and Cosmic Rays on Terrestrial Clouds and Global Warming	602
E. Pallé Bagó and C.J. Butler	
Author Index	607
