

Contents

Preface	vii
I General Concepts	1
1 Light Forces on Atoms	3
1.1 Two-Level Atoms	4
1.2 Adiabatic Elimination	10
1.3 Dipole and Radiation Pressure Forces	11
1.4 Dissipation	17
2 Atomic Cooling	23
2.1 Ray and Wave Atom Optics	24
2.2 Doppler Cooling	26
2.3 Sisyphus Cooling	30
2.4 Subrecoil Cooling	36
2.5 Evaporative Cooling	39
II Linear Atom Optics	43
3 Atomic Beam Collimation and Focusing	45
3.1 Collimation by Radiation Pressure Force	46
3.2 Focusing	47
3.3 Channeling by Standing Waves	49

3.4	Evanescent Field Mirrors	52
3.5	Focused Laser Beam Mirror	55
4	Atomic Diffraction	57
4.1	Raman-Nath and Bragg Diffraction	58
4.1.1	Raman-Nath Regime	59
4.1.2	Bragg Regime	62
4.2	Stern-Gerlach Regime	64
4.3	Spontaneous Emission	66
4.4	Mechanical Gratings	68
4.5	Atom Interferometers	68
5	Atomic Traps and Cavities	73
5.1	Magneto-Optical Traps	73
5.2	Magnetic Traps	76
5.2.1	Quadrupole Traps	78
5.2.2	Ioffe-Pritchard Traps	80
5.3	Optical Traps	83
5.4	Gravitational Cavities	86
5.5	Atomic Waveguides	89
III	Nonlinear Atom Optics	93
6	Collisions	95
6.1	Near-Resonant Dipole-Dipole Interaction	96
6.2	Propagation Effects	102
6.2.1	Free-Space-Like Regime	104
6.2.2	Large Interatomic Separations, $x/c \gg \Gamma^{-1}$	105
6.3	s -Wave Scattering and Pseudopotentials	107
6.3.1	s -Wave Scattering	107
6.3.2	Pseudopotentials	112
7	Simple Applications	117
7.1	Dipole-Dipole Interaction in an Atomic Cavity	118
7.1.1	Momentum Selection Rules	121
7.1.2	Energy Selection Rules	125
7.2	Atomic Diffraction by a Schrödinger Field	126
IV	Quantum Atom Optics	133
8	Review of Manybody Theory	135
8.1	Schrödinger Field Quantization	135
8.2	The Hartree Approximation	142
8.3	Quasiparticles	144

9	Matter-Wave Coherence	149
9.1	Review of Optical Coherence Theory	150
9.2	Coherence of Matter Waves	152
9.3	Electronic Coherence	153
9.4	Density Coherence	155
9.4.1	Multimode Density Correlations	156
9.5	Field Coherence	158
9.5.1	Higher-Order Correlations	162
10	Bose-Einstein Condensation	165
10.1	Bose-Einstein Condensation in Free Space	165
10.2	Bose-Einstein Condensation in Traps	169
10.3	Experimental Realization in Alkali Vapors	172
10.4	Mean-Field Theory	176
10.5	Finite Temperatures	183
10.6	Coherence and Bose-Einstein Condensation	187
10.6.1	Hartree Description	187
10.6.2	Wave Packet Description	188
10.6.3	Spontaneous Symmetry Breaking Description	189
11	Atom Lasers	191
11.1	Experiments	193
11.2	Theory of a Binary-Collision Atom Laser	194
11.2.1	Atom Number and Atom Statistics	197
11.2.2	Linewidth	199
11.3	Matter-Wave Solitons	205
11.3.1	Soliton Solutions of the Nonlinear Schrödinger Equation	206
11.3.2	Gap Solitons in Multicomponent Condensates	210
11.3.3	Gap Soliton Control	214
12	Nonlinear Wave Mixing	219
12.1	Stability of a Two-Component Condensate	220
12.2	Three-Component Spinor Condensate	228
12.2.1	Hartree Ground State	230
12.2.2	Spin Domains	231
12.2.3	Exact ground state	232
12.3	Atomic four-wave mixing	235
12.4	Quantum Theory of Atomic Four-Wave Mixing	238
12.4.1	Angular Momentum Representation	241
12.4.2	Dynamics	244
12.4.3	Quantum Correlations	245
13	Mixing of Optical and Matter Waves	249
13.1	Parametric Amplification of Atomic and Optical Fields	250

13.2 Four-Wave Mixing	254
13.2.1 Instability and Gain	255
13.2.2 Entanglement between Atomic and Optical Fields .	256
13.3 Matter-Wave Superradiance	258
13.4 Phase-Coherent Matter-Wave Amplification	265
References	269
Index	303
