Pre	eface	to the English Edition	VIJ
Fro	om tl	he Preface to the Russian Edition	XI
Int	rodu	lction	1
	0.1	Statement of Model Problems	3
	0.2	Difference Potentials	7
	0.3	Solution of Model Problems	25
Par	rt I.	Justification of Algorithms of the Method of Difference Potentials for Calculating Numerical Solutions of Interior Boundary-Value Problems for the Laplace Equation	<u></u>
1.	Pre	liminaries	37
	1.1	Local Splines	37
	1.2	Finite Fourier Series	40
	1.3	Calculation of the Solution of a Difference Analog	
		of the Dirichlet Problem for the Poisson Equation	
		in a Square Region	41
	1.4	Hölder Spaces	44
	1.5	Schauder and Thomee Estimates	48
	1.6	On the Proximity of Solutions	
		of the Differential and Difference Dirichlet Problems	
		for the Poisson Equation in a Square Domain	49
2.	Dif	ferential and Difference Potentials	53
	2.1	Fundamental Solution and Green Functions and Operators	53
	2.2	Potentials and Their Integral and Operator Representations	56
	2.3	Definition and Calculation of a Difference Potential	66
	2.4	Approximation of a Differential Potential	
		by a Difference Potential	73

3.1 Boundary Projection and a Boundary Condition	01
of Calderón–Seeley Type	
0. De and a frame Devendence Value Deablance	81
in a Domain to Equations on Its Boundary	84
4. Numerical Solution of Boundary-Value Problems	87
4.1 Intermediate Discretization	87
4.2 Final Discretization	97
4.3 Conjugate Gradient Method1	17
4.4 Reduction of the Discrete Problem to a Form	
Convenient for the Solution by the Conjugate	
Gradient Method 1	23
4.5 An Algorithm for the Numerical Solution	
of the Discrete Problem by the Conjugate Gradient	
Method	29
4.6 A Computational Example 1	35
	•••
Part II. General Constructions of Surface Potentials	
and Boundary Equations on the Basis	
of the Concept of a Clear Trace	
1. Generalized Potentials and Boundary	
Equations with Projections for Differential	
Operators	41
1.1 Clear Trace and General Constructions	
of Differential Potentials and Boundary Equations	
with Projections1	41
1.2 Conditionality of Boundary Equations	
with Projections	51
1.3 Comments on the Literature 1	54
2. General Constructions of Potentials and	
Boundary Equations for Difference Operators	59
2.1 General Constructions 1	59
2.2 Examples 1	.67
2.3 Cauchy-Type Potentials for General Linear Systems	
2.3 Cauchy-Type Potentials for General Linear Systems of Difference Equations on Abstract Grids	72
 2.3 Cauchy-Type Potentials for General Linear Systems of Difference Equations on Abstract Grids	72
 2.3 Cauchy-Type Potentials for General Linear Systems of Difference Equations on Abstract Grids	.72 .79
 2.3 Cauchy-Type Potentials for General Linear Systems of Difference Equations on Abstract Grids	72 79 98

3.	Laz Str of a 3.1	arev's Results on the Algebraic ucture of the Set of Surface Potentials A Linear Operator
	3.2	Potentials with Density from the Space of Clear
		Traces and Boundary Equations with Projections
		of an Abstract Operator 209
Pa	rt II	I. A General Scheme of the Method of Difference
		Potentials for the Numerical Solution
		of Differential and Difference Boundary-Value
		Problems of Mathematical Physics
1		Conoral Scheme of the Method
1.	ofI	Difference Potentials for Differential Problems 217
	1.1	Nonclassical Auxiliary Problems
	1.2	Admissible Arbitrariness in the Choice
		of the Construction of a Clear Trace
	1.3	Scheme for Approximating Differential Potentials
		by Difference Potentials
	1.4	The Reznik Theorems on the Approximation
		of the Surface Potentials of Elliptic Operators
		by Difference Potentials 231
	1.5	Intermediate Discretization of Boundary Equations
		with Projections
	1.6	Constructive Discretization Scheme for Boundary
		Equations with Projections
	1.7	Fragments of Other Methods of Constructive
	1 0	Discretization
	1.8	Methods of Deriving an Algebraic System
	10	On the Operator adjoint to the Operator
	1.9	of the Difference Auxiliary Problem
		of the Difference Auxiliary 1100fem
2.	Illu	strations of Constructions of the Method
	of I	Difference Potentials
	2.1	Examples of Interior Problems
	2.2	Examples of Exterior Problems
	2.3	An Example of Constructing the Difference
		Potential for Solving Numerically Boundary-Value
	o .	Problems in a Domain with a Cut
	2.4	An Example of Boundary Equations with Projections
		for the Stokes System

XVI Contents

3.	Ger for of I	neral Scheme of the Method of Difference Potentials Solving Numerically the Difference Analogs Differential Boundary-Value Problems
	3.1	Statement of Difference Problems
	3.2	Abstract Equations with Projections
	3.3	Reduction of Difference Problems to Equations
		for the Density of the Difference Potential and
		the Scheme for Calculating Solutions to These Equations 302
	3.4	Methods for Obtaining Boundary Conditions
		with Projections that are Convenient for Iterations
	3.5	Difference Single Layer Potential as an Example
	0.0	of Potentials of Special Form. Resonance
		in the Complementary Domain, Relation
		to the Capacity Matrix Method 315
	36	Remark on the Combined Use of the Finite
	0.0	Element Method, the Fedorenko Multigrid Method
		and the Method of Difference Potentials 321
Pa	rt IV	7. Examples of MDP Algorithms for Solving Numerically Boundary-Value Problems of Mathematical Physics
1.	The	e Tricomi Problem
	1.1	Difference Analogs of the Tricomi Problem
	1.2	Algorithms of the Method of Difference Potentials
	1.3	Computational Results
2.	Co Pot	nstructions of the Method of Difference centials for the Computation of Stressed
	Sta	tes of Elastic Compressible Materials
	21	Difference Potential
	22	Bemarks on Algorithms of the Method of Difference
	2.2	Potentials
	D	hims of Internal Florin of Viccous
J.	Pro Teres	omenoscible Eluida
	Inc	A Alweither for Colore the Two Dimensional
	3.1	An Algorithm for Solving the Two-Dimensional
		Stokes Froblem Numerically in the Natural Variables
		(lorgasnov Algorithm)
4.	An	Example of the MDP Algorithm
	for	Computing the Stationary Acoustic
	Wa	ve Field outside a Solid of Revolution
	4.1	Difference Spherical Harmonics

	4.2	Constructions of the Difference Potential	
		for Exterior Problems	
	4.3	An Algorithm for Solving Exterior Problems	
		for Solids of Revolution 380	
	4.4	Numerical Examples 389	
Pa	rt V.	Artificial Boundary Conditions for Stationary Problems	
1	An	Efficient Algorithm for Constructing	
1.	An Emicient Algorithm for Constructing Artificial Boundary Conditions for a Model		
	Dro	hlem 30	
	110	Diem	
2.	On	the Results of the Application	
	oft	he Method of Difference Potentials	
	to t	he Construction of Artificial Boundary	
	Cor	ditions for External Flow Computations	
	2.1	Introduction	
	2.2	Formulation of the Problem	
	2.3	Two-Dimensional Flows Around Airfoils	
	$\frac{2.3}{2.4}$	Two-Dimensional Flows Around Airfoils	
	2.3 2.4 2.5	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42	
	$2.3 \\ 2.4 \\ 2.5$	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42	
 Pa	2.3 2.4 2.5 rt V	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42 Image: Constructions of Difference 42	
 Pa	2.3 2.4 2.5 rt V	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42 I. General Constructions of Difference 1 Nonreflecting Artificial Boundary Conditions 1	
 Pa	2.3 2.4 2.5 rt V	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42 I. General Constructions of Difference 6 Nonreflecting Artificial Boundary Conditions 6 for Time-Dependent Problems 6	
Pa	2.3 2.4 2.5 rt V	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42 I. General Constructions of Difference 42 Nonreflecting Artificial Boundary Conditions 6 for Time-Dependent Problems 4	
 Pa 1.	2.3 2.4 2.5 rt V	Two-Dimensional Flows Around Airfoils 41 Three-Dimensional Flows Past a Wing 41 Three-Dimensional Flow with Jet Exhaust 42 I. General Constructions of Difference 42 Nonreflecting Artificial Boundary Conditions 6 for Time-Dependent Problems 6

Part VII. Nonreflecting Artificial Boundary Conditions for Replacing the Rejected Equations with Lacunas

1.	Problem of Constructing NRABCs		
	and the Corresponding Auxiliary Cauchy		
	Problem		
	1.1	Definition of Nonreflecting Artificial Boundary	
		Conditions (NRABCs)	
	1.2	Auxiliary Difference Cauchy Problem	
		for Constructing NRABCs	
2.	Algorithm for Solving the Cauchy Problem		
	wit	h the Help of Lacunas 495	
	2.1	Lacunas	
	2.2	Economical Algorithm for Computing the Solution	
		of the Difference Cauchy Problem 499	
	2.3	Taking Account of the Special Properties	
		of the Auxiliary Difference Cauchy Problem Used	
		to Compute the Nonreflecting Artificial Boundary	
		Conditions	
	2.4	Turchaninov's Phenomenon	
	2.5	Numerical Experiments	
	2.6	On Problems in a Moving Computational Domain 510	

Part VIII. Problems of Active Shielding and Imitation

1.	Act	ive Shielding Control	
	1.1	Difference Stationary Problem of Active Shielding 515	
	1.2	Brief Bibliographic Review	
2.	Dif	ference Imitation Problems 519	
	2.1	Difference Schemes 519	
	2.2	Statement and General Solution of the Imitation Problem 520
