Preface	ix
<i>Chapter 1 (V.E. Henrich)</i>	
Metal oxide surfaces and interfaces: concepts and issues	1
1. Introduction	1
2. Interesting bulk properties	2
2.1 Electronic properties	2
2.2 Crystal structure	8
3. From bulk to surface	9
4. Electrons on oxide surfaces	16
5. Oxide-gas, -liquid and -solid interfaces	21
6. Adsorption on metal oxides	25
7. Endnote	31
Acknowledgements	33
References	33
<i>Chapter 2 (C. Noguera)</i>	
Clean oxide surfaces: a theoretical review	35
1. Introduction	35
2. Numerical methods	36
2.1 Classical approaches	36
2.2 Semi-empirical quantum methods	37
2.3 The <i>ab initio</i> HF method and methods beyond	38
2.4 The <i>ab initio</i> Density Functional Theory and methods beyond	39
2.4.1 The Self-Interaction Correction (SIC) method	40
2.4.2 The GW method	41
2.4.3 The LDA+U method	42
2.5 General features for simulating surfaces	43
3. Review of literature	44
3.1 Fluorite MO ₂ and anti-fluorite M ₂ O structures	45
3.2 Rocksalt structure	45
3.3 Corundum structure	49
3.4 Rutile structure	51
3.5 Wurtzite structure	53
3.6 Perovskite structure	54
3.7 Other oxides	57
4. Discussion of non-polar stoichiometric surfaces	59
4.1 Atomic structure	59
4.2 Energetics	61
4.3 Electron distribution	62
4.4 One particle excitations	65
4.5 Two particle excitations	68
5. Non-stoichiometric surfaces	69
5.1 Atomic relaxation	70
5.2 Charge and spin distribution	70

5.3 Spectroscopic signature	72	2.2 Vanadium oxide surfaces	148
5.4 Energetics	73	2.2.1 Geometric structure	148
6. Polar surfaces	75	2.2.2 Physical and chemical properties	152
6.1 Criterion for surface polarity	76	(a) Properties of clean surfaces	152
6.2 Models of electronic structure in iono-covalent materials: application to polar surfaces	78	(b) Surface oxygen vacancies	157
6.3 Surface processes relevant for polarity healing	80	(c) Adsorption	162
6.4 Summary	83	3. Molybdenum oxides	168
7. Conclusion	85	3.1 Molybdenum oxide bulk systems	170
References	86	3.1.1 Geometric structure	170
<i>Chapter 3</i> (G. Pacchioni)		3.1.2 Electronic structure	172
Theory of point defects at the MgO surface		3.2 Molybdenum oxide surfaces	172
1. Introduction	94	3.2.1 Geometric structure	172
2. Quantum chemical description of ionic crystals	95	3.2.2 Physical and chemical properties	175
2.1 Cluster models	96	(a) Properties of clean surfaces	175
2.2 Embedding schemes	98	(b) Surface oxygen vacancies	182
2.3 Solutions of the Schrödinger equation	99	(c) Adsorption	186
3. Role and nature of defects at the MgO surface	101	Synopsis	190
3.1 Low-coordinated cations	103	Acknowledgement	191
3.2 Low-coordinated anions	107	References	191
3.3 Hydroxyl groups	109	<i>Chapter 5</i> (R. Lindsay, B.G. Daniels and G. Thornton)	
3.4 Anion vacancies	110	Geometry of adsorbates on metal oxide surfaces	
3.4.1 Charge distribution	111	1. Introduction	199
3.4.2 Hyperfine interactions	113	2. Magnesium oxide – MgO	202
3.4.3 Stability and formation energies	115	2.1 MgO(100) – H ₂ O	202
3.4.4 Energy levels and ionisation potentials	116	2.2 MgO(100) – C ₂ H ₂	206
3.4.5 Barriers to vacancies diffusion	117	2.3 MgO(100) – CO	207
3.4.6 Optical spectra	118	2.4 MgO(100) – CO ₂	208
3.4.7 Chemical reactivity	120	2.5 MgO(100) – Ca	209
3.5 Cation vacancies	121	2.6 MgO(100) – Ag	210
3.6 Divacancies	122	2.7 MgO(100) – Pd	212
3.7 Impurity atoms	124	2.8 MgO(100) – Ni	212
3.8 O ⁻ radical anions	126	2.9 MgO(100) – Fe	213
3.9 (111) microfacets	128	3. Nickel oxide – NiO	213
4. Conclusions	129	3.1 NiO(100) – NO	214
Acknowledgements	129	3.2 NiO(100) – CO	216
References	130	3.3 NiO(100) – H ₂ S	217
<i>Chapter 4</i> (K. Hermann and M. Witko)		3.4 NiO(111) – NO	218
Theory of physical and chemical behaviour of transition metal oxides: vanadium and molybdenum oxides		3.5 NiO(111) – CO	219
1. Introduction	136	4. Titanium dioxide – TiO ₂	219
2. Vanadium oxides	139	4.1 TiO ₂ (110) – HCOOH	221
2.1 Vanadium oxide bulk systems	140	4.2 TiO ₂ (110) – H ₃ CCOOH	223
2.1.1 Geometric structure	140	4.3 TiO ₂ (110) – H ₅ C ₂ COOH	224
2.1.2 Electronic properties	142	4.4 TiO ₂ (110) – H ₅ C ₆ COOH	224
		4.5 TiO ₂ (110) – bi-isonicotinic acid	225
		4.6 TiO ₂ (110) – Na	226
		4.7 TiO ₂ (110) – Na/CO ₂	227
		4.8 TiO ₂ (110) – (NH ₄) ₆ Mo ₇ O ₂₄ .4H ₂ O	228

4.9 TiO ₂ (110) – {Rh(CO) ₂ Cl} ₂	230	3.1 Specific sample preparation and requirements	262
4.10 TiO ₂ (110) – SO ₂	231	3.2 MgO(001) surface	263
4.11 TiO ₂ (110) – K	232	3.3 α -Al ₂ O ₃ (0001)(1x1) and reconstructed surfaces	266
5. Aluminium oxide – Al ₂ O ₃	233	3.4 TiO ₂ (110)-(1x1) and (001)-(1x3) surfaces	273
5.1 α -Al ₂ O ₃ (0001) – Cu	233	3.5 NiO(111)-p(2x2) reconstructions	276
5.2 γ -like Al ₂ O ₃ (0001) – di-tert-butyl nitroxide	234	3.5.1 NiO(111)-p(2x2) structure after air annealing	277
6. Chromium oxide – Cr ₂ O ₃	235	3.5.2 NiO(111)-p(2x2) structure after controlled reduction	279
6.1 Cr ₂ O ₃ (0001) - CO ₂	235	3.5.3 NiO(111)-p(2x2) comparison and conclusion	281
6.2 Cr ₂ O ₃ (0001) – NO	236	3.6 CoO(111) and MnO(111)	281
7. Iron oxide – Fe _x O _y	236	3.7 ZnO(0001) and ZnO(1010)	284
7.1 FeO(111) - H ₅ C ₆ CHCH ₂	237	3.8 SrTiO ₃ (001)	286
7.2 Fe ₃ O ₄ (111) - H ₅ C ₆ CHCH ₂	237	3.9 Cr ₂ O ₃ (0001)-(1x1)	288
8. Zinc oxide – ZnO	238	4. Structure of thin oxides films	289
8.1 ZnO(1010) - HCOOH	238	4.1 NiO(111)-p(2x2) thin film structure	289
8.2 ZnO(1010) - CO ₂	238	4.2 Al ₂ O ₃ layer on NiAl	292
8.3 ZnO(1010) - C ₆ H ₆	239	4.3 Fe ₂ O ₃ and Fe ₃ O ₄ layers	293
8.4 ZnO(1010) - C ₅ H ₅ N	240	4.4 Cr ₂ O ₃ layers	293
8.5 ZnO(1010) - C ₆ N ₃ H ₅ , C ₇ N ₂ H ₆ , C ₇ N ₂ H ₆ , C ₇ N ₃ H ₇	241	5. Conclusions and future outlook	294
8.6 ZnO(0001) - CO	242	Acknowledgements	295
8.7 ZnO(0001) - CO ₂	243	References	296
8.8 ZnO(0001) - HCOOH	243	<i>Chapter 7</i> (S.A. Chambers)	
8.9 ZnO(0001) - C ₅ H ₅ N	244	Structure of thin epitaxial oxide films and their surfaces	
8.10 ZnO(0001) - K	244	1. Introduction	301
8.11 ZnO(0001) – CO	246	2. Oxidation chemistry and its effect on surface and film structure	303
8.12 ZnO(0001) – CO ₂	246	2.1 Fe ₃ O ₄ (111) and α -Fe ₃ O ₄ (0001) on Pt(111) and α -Al ₂ O ₃ (0001)	303
8.13 ZnO(0001) – HCOOH	247	2.2 CrO ₂ on TiO ₂ (110) & (100), and α -Cr ₂ O ₃ on α -Al ₂ O ₃	309
8.14 ZnO(0001) – CH ₃ OH	247	3. Lattice mismatch and residual strain fields	313
8.15 ZnO(0001) – C ₆ H ₆	247	3.1 (α -Fe ₂ O ₃ / α -Cr ₂ O ₃) _n on α -Al ₂ O ₃	314
8.16 ZnO(0001) – C ₆ H ₅ OH	248	4. Crystal symmetry mismatch	316
8.17 ZnO(0001) – C ₅ H ₅ N	248	4.1 Fe ₃ O ₄ on MgO(001)	317
9. Copper (I) oxide – Cu ₂ O	249	5. Conclusions	320
9.1 Cu ₂ O(111) – CH ₃ OH	249	Acknowledgements	323
Acknowledgements	249	References	323
References	250	<i>Chapter 8</i> (H.-J. Freund, H. Kuhlenbeck and T. Risse)	
<i>Chapter 6</i> (G. Renaud and A. Barbier)		Molecules on well-structured oxide surfaces	
Atomic structure of oxide surfaces by surface X-ray scattering		1. Introduction	326
1. Introduction	256	2. Surfaces of oxides with rocksalt structure	327
2. X-ray scattering by surfaces	258	3. Surfaces of oxides with corundum structure	341
2.1 Grazing incidence X-rays	258	4. Surfaces of oxides with rutile structure	359
2.2 Basic X-ray scattering	259	5. Surfaces of oxides with layered structures	363
2.3 Diffraction by a surface	260	6. Synopsis	366
2.4 Instrumental considerations	262	References	367
3. Surfaces of oxide single crystals	262		

*Chapter 9 (C.C. Chusuei, D.C. Meier and D.W. Goodman)***Atomic-scale chemical and electronic structure studies of well-defined metal oxide surfaces**

1. Introduction	373
2. Magnesium oxide	374
2.1 Adsorption of benzene on MgO/Mo(100) studied by MIES/UPS	374
2.2 MIES and TPD analysis of CH ₃ OH and D ₂ O adsorption on MgO/Mo(100)	378
2.3 Surface defect characterisation of MgO by MIES	381
3. Titania	385
3.1 Structural and electronic properties of Au on TiO ₂ (110)	385
3.2 Adsorption of CO on Au/TiO ₂	388
4. Thin-film alumina and mixed-metal oxides	392
4.1 STM imaging of Al ₂ O ₃ thin films	393
4.2 NO adsorption on MgO-NiO and CaO-NiO	395
5. High pressure STM studies of supported gold clusters	399
5.1 Imaging Au on TiO ₂ (110) at elevated pressures with variable temperature and pressure STM	400
5.2 Imaging solution-deposited Au ₆ (PPh ₃) ₆ [BF ₄] ₂ on TiO ₂ (110)	402
6. Summary	404
Acknowledgements	405
Reference	405

*Chapter 10 (A.B. Sherrill and M.A. Barteau)***Principles of reactivity from studies of organic reactions on model oxide surfaces**

1. Introduction and scope	409
2. Titanium dioxide as a model for transition metal oxides	409
3. Case study I: formic acid as a probe of surface properties	412
3.1 Formic acid decomposition on metal oxides	412
3.2 The participation of oxygen vacancies in formic acid decomposition	415
3.3 Tracking formic acid decomposition with scanning probe microscopy	418
3.4 Catalytic reactions of formic acid on titanium dioxide (110)	420
3.5 Extension to higher carboxylic acids	422
4. Case study II: thermal and photoreactions of methanol on TiO ₂	424
4.1 Thermal reactions of methanol on TiO ₂ single crystals	425
4.2 Thermal reactions of methanol on TiO ₂ powders	428
4.3 Thermal reactions of methanol on SnO ₂ – another rutile oxide	429
4.4 CH ₃ OH decomposition on fluorite metal oxides	430
4.5 Decomposition of higher alcohols on titanium dioxide single crystal surfaces	432
4.6 Higher alcohols: extension to polycrystalline TiO ₂ and other materials	435
4.7 Photoreactions of alcohols on TiO ₂	437
5. Summary	439
References	440

*Chapter 11 (U. Diebold)***The structure of TiO₂ surfaces**

1. Introduction	443
2. Bulk structures	444
2.1 Bulk defects	445
3. The structure of the rutile TiO ₂ (110) surface	446
3.1 The rutile TiO ₂ (110)(1x1) surface	447
3.1.1 Bulk truncation	447
3.1.2 Relaxations	449
3.1.3 Appearance in STM and AFM	451
3.1.4 Surface defects	455
Step edges	455
Oxygen vacancies created by annealing	457
Oxygen vacancies created by other means	459
Line defects	459
Impurities	460
Crystallographic shear planes	461
3.2 Reconstructions	463
3.2.1 Reconstruction under reducing conditions: the structure(s) of the (1x2) phase	463
3.2.2 Restructuring under oxidising conditions	465
3.3 Recommendations for surface preparation	469
4. The structure of the rutile (100) surface	470
4.1 The TiO ₂ (100)(1x1) surface	470
4.2 Reconstructions	472
4.2.1 The microfacet model of the rutile TiO ₂ (100)(1x3) surface	472
4.2.2 Is the simple microfacet model valid?	473
5. Rutile (001)	474
6. Vicinal surfaces	475
7. Anatase surfaces	476
7.1 Anatase (101)	476
7.2 Anatase (001)	478
8. Conclusion	479
References	480

*Chapter 12 (G.S. Rohrer)***The anisotropy of metal oxide surface properties**

1. Introduction	485
2. Surface character-property relationships	486
2.1 Particulate oxidation catalysts	486
2.2 Single crystal surfaces	488
2.3 Thin films	489
3. Factors determining surface morphology	490
4. Factors influencing surface stoichiometry	496
4.1 The solid-vapour equilibrium	497
5. Reaction anisotropies on MoO ₃ surfaces	501
6. The orientation dependence of the photochemical reactivity of TiO ₂	506

7. Conclusion	510	3.2 Stoichiometric oxides	618
Acknowledgement	510	3.2.1 The TiO ₂ model surface	618
References	511	3.2.2 The TiO ₂ (100)(1x3) and (110)(1x2) reconstructed surfaces	622
<i>Chapter 13</i> (B.E. Hayden)		3.2.3 Some further oxide surfaces studied by DIET	623
Vibrational spectroscopy of oxide surfaces		4. Adsorption and reactivity at oxides by DIET	625
1. Introduction	514	4.1 Small molecules	625
2. Theoretical and experimental considerations	515	4.2 Large molecules	631
2.1 High resolution electron energy loss spectroscopy (HREELS)	516	5. Summary of relevant kinetics parameters	638
2.2 Reflection absorption infrared spectroscopy (RAIRS)	521	6. Conclusions	638
3. Surface vibrational modes of the substrate	530	Acknowledgements	638
4. Vibrational spectroscopy of adsorbates	532	Index	645
5. Vibrational spectroscopy of adsorbates on oxide supported metals	539		
References	546		
<i>Chapter 14</i> (R.G. Egdell)			
Electronic structure of oxide surfaces			
1. Introduction	550		
2. Electronic structure of oxides: general considerations	551		
2.1 Models of oxide electronic structure	551		
2.2 Covalency and band dispersion in oxides	552		
2.3 Surface states in oxides	553		
3. Experimental techniques for probing electronic structure of oxides	554		
3.1 Photoemission and inverse photoemission spectroscopies	554		
3.2 Electron energy loss spectroscopy	556		
3.3 Scanning tunnelling spectroscopy	557		
4. Selected case histories	558		
4.1 The rocksalt MgO(100) surface	558		
4.2 Transition metal rocksalt monoxide (100) surfaces	565		
4.3 SnO ₂	572		
4.4 TiO ₂	577		
4.4.1 Comparison of TiO ₂ and SnO ₂	577		
4.4.2 TiO ₂ (110)	578		
4.4.3 TiO ₂ (100)	585		
4.5 WO ₃ and Na _x WO ₃	588		
4.5.1 WO ₃ (001)	588		
4.5.2 Na _x WO ₃ (001)	593		
5. Concluding remarks	598		
References	598		
<i>Chapter 15</i> (J.L. de Segovia and E.M. Williams)			
Desorption induced by electronic transitions, DIET, at oxide surfaces			
1. Historical introduction to ESD and PSD	608		
2. Ejection mechanisms: the Feibelman-Knotek model	614		
3. DIET at oxide surfaces	617		
3.1 Oxidised surfaces	618
