Contents

	Foreword	vii
	Preface	xi
	Guide to the Main Mathematical Concepts and Their Application	xix
	Notation and Symbols	xxi
1	Introduction1.1The Image Society1.2What Is a Digital Image?1.3About Partial Differential Equations (PDEs)1.4Detailed Plan	$f 1 \\ 1 \\ 3 \\ 5 \\ 5 \\ 5 \\ \end{array}$
2	Mathematical Preliminaries	23
	How to Read This Chapter	23
	2.1 The Direct Method in the Calculus of Variations	24
	2.1.1 Topologies on Banach Spaces	24
	2.1.2 Convexity and Lower Semicontinuity	26
	2.1.3 Relaxation	31
	2.1.4 About Γ -Convergence	34
	2.2 The Space of Functions of Bounded Variation	36
	2.2.1 Basic Definitions on Measures	36

Contents	xvii

		2.2.2 Definition of $BV(\Omega)$	39	
		2.2.3 Properties of $BV(\Omega)$	40	
		2.2.4 Convex Functions of Measures	44	
	2.3	Viscosity Solutions in PDEs	44	
		2.3.1 About the Eikonal Equation	44	
		2.3.2 Definition of Viscosity Solutions	46	
		2.3.3 About the Existence	48	4 T
		2.3.4 About the Uniqueness	49	He
	2.4	Elements of Differential Geometry: Curvature	51^{-1}	4.1
		2.4.1 Parametrized Curves	52	4.2
		2.4.2 Curves as Isolevel of a Function u	52	
		2.4.3 Images as Surfaces	53	
	2.5	Other Classical Results Used in This Book	53	
	2.0	2.5.1 Inequalities	54	
		2.5.2 Calculus Facts	55	
		2.5.3 About Convolution and Smoothing	56	
		2.5.4 Uniform Convergence	57	
		2.5.5 Dominated Convergence Theorem	57	4.3
		2.5.6 Well-Posed Problems	58	
			00	
3	Imag	ge Restoration	59	
	How	to Read This Chapter	59	
	3.1	Image Degradation	60	
	3.2	The Energy Method	62	
		3.2.1 An Inverse Problem	62	
		3.2.2 Regularization of the Problem	63	
		3.2.3 Existence and Uniqueness of a Solution for		5 O
		the Minimization Problem	66	He
		3.2.4 Toward the Numerical Approximation	70	5.1
		A Quadratic Approximation	71	
		The Half-Quadratic Minimization	72	
		3.2.5 Some Invariances and the Bole of λ	77	
		3.2.6 Some Remarks on the Nonconvex Case	80	
	3.3	PDF-Based Methods	84	
	0.0	3.3.1 Smoothing PDEs	85	
		The Heat Equation	85	
		Nonlinear Diffusion	88	
		The Alvarez-Guichard-Lions-Morel	00	
		Scale Space Theory	07	
		Weickert's Approach	102	
		Surface Based Approaches	105	
		332 Smoothing_Enhancing DDFs	111	
		The Derone and Melile Model	111	
		Popularization of the Derens and Malle Market	111	5 '
		Cetté et al	110	0.1
		$\bigcirc alle et al. \ldots \ldots$	113	

		3.3.3	Enhancing PDEs	118
			The Osher and Rudin Shock Filters	118
			A Case Study: Construction of a Solution by	
			the Method of Characteristics	120
			Comments on the Shock-Filter Equation	124
			······································	
4	The	Segme	entation Problem	129
	How	to Read	1 This Chapter	129
	4.1	Defini	tion and Objectives	130
	4.2	The M	Iumford and Shah Functional	133
		4.2.1	A Minimization Problem	133
		4.2.2	The Mathematical Framework for the	
			Existence of a Solution	133
		4.2.3	Regularity of the Edge Set	141
		4.2.4	Approximations of the Mumford and Shah	
			Functional	146
		4.2.5	Experimental Results	151
	4.3	Geode	sic Active Contours and the Level-Set Method	152
		4.3.1	The Kass–Witkin–Terzopoulos model	153
		4.3.2	The Geodesic Active Contours Model	155
		4.3.3	The Level-Set Method	162
		4.3.4	Experimental Results	174
		4.3.5	About Some Recent Advances	176
			Global Stopping Criterion	176
			Toward More General Shape Representation	178
5	Oth	or Chal	llonging Applications	181
U	How	to Read	This Chanter	181
	5 1	Seque	$\begin{array}{c} 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 $	182
	0.1	5 1 1	Introduction	182
		519	The Optical Flow: An Apparent Motion	184
		0.1.2	The Optical Flow. All Apparent Motion	194
			Solving the Aperture Problem	186
			Overview of a Discontinuity Preserving	100
			Variational Approach	100
			$\begin{array}{c} \text{Alternatives to the OFC} \end{array}$	103
		512	Sequence Segmentation	105
		0.1.0	Introduction	195
			A Variational Formulation	190
			A variational Formulation	190
			Mathematical Study of the	100
			Time-Sampled Energy	199
		F 1 4	Experiments	202
	F 0	5.1.4 T	Sequence Kestoration	204
	5.2	Image		210
		5.2.1	Introduction	210
