<i>Preface</i>	ix
Part 1: Introduction	1
1 Motivation	3
2 Pictures of the nucleus	6
3 Some optics	9
4 Why electron scattering?	14
5 Target response surfaces	19
6 Why coincidence experiments?	23
7 Units and conventions	26
Part 2: General analysis	29
8 Electromagnetic interactions	31
9 Multipole analysis	34
10 Dirac equation	45
11 Covariant analysis	51
12 Excitation of discrete states in (e, e')	63
13 Coincidence experiments $(e, e' X)$	76
14 Deep-inelastic scattering from the nucleon	95
15 Polarization in deep-inelastic scattering	110
16 Parity violation in inclusive electron scattering	115

	Part 3: Quantum electrodynamics	127
17	Basic elements	129
18	Radiative corrections	139
	Part 4: Selected examples	145
19	Basic nuclear structure	147
20	Some applications	157
21	A relativistic model of the nucleus	169
22	Elastic scattering	182
23	Quasielastic scattering	194
24	The quark model	210
25	Quantum chromodynamics	221
26	The standard model	231
27	Parity violation	247
28	Excitation of nucleon resonances	251
	Part 5: Future directions	261
29	TJNAF(CEBAF)	263
30	Other facilities	272
31	Future directions	278
	Appendixes	288
	Appendix A: Long-wavelength reduction	288
	Appendix B: Center of mass (C-M) motion	294
	Appendix C: Weizsäcker–Williams approximation	300
	Appendix D: Polarization and spin-1/2 fermions	304
	Appendix E: Symmetry properties of matrix elements	308
	Appendix F: Angular correlations	312
	Appendix G: Relativistic quasielastic scattering	317
	Appendix H: Pion electroproduction	322
	Appendix I: Light-cone variables	331
	<i>References</i>	337
	<i>Index</i>	352
