

CONTENTS

Preface	xiii
1 Vector Analysis	1
1.1 Definitions, Elementary Approach	1
1.2 Rotation of the Coordinate Axes	8
1.3 Scalar or Dot Product	13
1.4 Vector or Cross Product	19
1.5 Triple Scalar Product, Triple Vector Product	27
1.6 Gradient, ∇	35
1.7 Divergence, $\nabla \cdot$	40
1.8 Curl, $\nabla \times$	44
1.9 Successive Applications of ∇	51
1.10 Vector Integration	55
1.11 Gauss's Theorem	61
1.12 Stokes's Theorem	65
1.13 Potential Theory	69
1.14 Gauss's Law, Poisson's Equation	80
1.15 Dirac Delta Function	84
1.16 Helmholtz's Theorem	96
2 Curved Coordinates, Tensors	103
2.1 Orthogonal Coordinates	103
2.2 Differential Vector Operators	108
2.3 Special Coordinate Systems: Introduction	113
2.4 Circular Cylindrical Coordinates	114
2.5 Spherical Polar Coordinates	121

2.6	Tensor Analysis	131
2.7	Contraction, Direct Product	137
2.8	Quotient Rule	139
2.9	Pseudotensors, Dual Tensors	141
2.10	Non-Cartesian Tensors	150
2.11	Tensor Derivative Operators	160
3	Determinants and Matrices	165
3.1	Determinants	165
3.2	Matrices	174
3.3	Orthogonal Matrices	192
3.4	Hermitian Matrices, Unitary Matrices	206
3.5	Diagonalization of Matrices	213
3.6	Normal Matrices	227
4	Group Theory	237
4.1	Introduction to Group Theory	237
4.2	Generators of Continuous Groups	242
4.3	Orbital Angular Momentum	258
4.4	Angular Momentum Coupling	263
4.5	Homogeneous Lorentz Group	275
4.6	Lorentz Covariance of Maxwell's Equations	278
4.7	Discrete Groups	286
5	Infinite Series	303
5.1	Fundamental Concepts	303
5.2	Convergence Tests	306
5.3	Alternating Series	322
5.4	Algebra of Series	325
5.5	Series of Functions	329
5.6	Taylor's Expansion	334
5.7	Power Series	346
5.8	Elliptic Integrals	354
5.9	Bernoulli Numbers, Euler-Maclaurin Formula	360
5.10	Asymptotic Series	373
5.11	Infinite Products	381
6	Functions of a Complex Variable I	389
6.1	Complex Algebra	390
6.2	Cauchy-Riemann Conditions	399
6.3	Cauchy's Integral Theorem	404
6.4	Cauchy's Integral Formula	411
6.5	Laurent Expansion	416
6.6	Mapping	425
6.7	Conformal Mapping	434

7	Functions of a Complex Variable II	439
7.1	Singularities	439
7.2	Calculus of Residues	444
7.3	Dispersion Relations	469
7.4	Method of Steepest Descents	477
8	Differential Equations	487
8.1	Partial Differential Equations	487
8.2	First-Order Differential Equations	496
8.3	Separation of Variables	506
8.4	Singular Points	516
8.5	Series Solutions — Frobenius's Method	518
8.6	A Second Solution	533
8.7	Nonhomogeneous Equation — Green's Function	548
8.8	Numerical Solutions	567
9	Sturm-Liouville Theory	575
9.1	Self-Adjoint ODEs	575
9.2	Hermitian Operators	588
9.3	Gram-Schmidt Orthogonalization	596
9.4	Completeness of Eigenfunctions	604
9.5	Green's Function — Eigenfunction Expansion	616
10	Gamma-Factorial Function	631
10.1	Definitions, Simple Properties	631
10.2	Digamma and Polygamma Functions	643
10.3	Stirling's Series	649
10.4	The Beta Function	654
10.5	Incomplete Gamma Function	660
11	Bessel Functions	669
11.1	Bessel Functions of the First Kind $J_\nu(x)$	669
11.2	Orthogonality	688
11.3	Neumann Functions, Bessel Functions of the Second Kind	694
11.4	Hankel Functions	702
11.5	Modified Bessel Functions $I_\nu(x)$ and $K_\nu(x)$	709
11.6	Asymptotic Expansions	716
11.7	Spherical Bessel Functions	722
12	Legendre Functions	739
12.1	Generating Function	739
12.2	Recurrence Relations	748
12.3	Orthogonality	755
12.4	Alternate Definitions	767
12.5	Associated Legendre Functions	771
12.6	Spherical Harmonics	786

12.7	Orbital Angular Momentum Operators	792
12.8	The Addition Theorem for Spherical Harmonics	796
12.9	Integrals of Three Ys	802
12.10	Legendre Functions of the Second Kind	806
12.11	Vector Spherical Harmonics	813
13	Special Functions	817
13.1	Hermite Functions	817
13.2	Laguerre Functions	828
13.3	Chebyshev Polynomials	839
13.4	Hypergeometric Functions	850
13.5	Confluent Hypergeometric Functions	855
14	Fourier Series	863
14.1	General Properties	863
14.2	Advantages, Uses of Fourier Series	870
14.3	Applications of Fourier Series	874
14.4	Properties of Fourier Series	886
14.5	Gibbs Phenomenon	893
14.6	Discrete Fourier Transform	898
15	Integral Transforms	905
15.1	Integral Transforms	905
15.2	Development of the Fourier Integral	909
15.3	Fourier Transforms—Inversion Theorem	911
15.4	Fourier Transform of Derivatives	920
15.5	Convolution Theorem	924
15.6	Momentum Representation	928
15.7	Transfer Functions	935
15.8	Laplace Transforms	938
15.9	Laplace Transform of Derivatives	946
15.10	Other Properties	953
15.11	Convolution or Faltungs Theorem	965
15.12	Inverse Laplace Transform	969
16	Integral Equations	983
16.1	Introduction	983
16.2	Integral Transforms, Generating Functions	991
16.3	Neumann Series, Separable Kernels	997
16.4	Hilbert–Schmidt Theory	1009
17	Calculus of Variations	1017
17.1	A Dependent and an Independent Variable	1018
17.2	Applications of the Euler Equation	1023
17.3	Several Dependent Variables	1031
17.4	Several Independent Variables	1036

17.5	Several Dependent and Independent Variables	1038
17.6	Lagrangian Multipliers	1039
17.7	Variation With Constraints	1045
17.8	Rayleigh-Ritz Variational Technique	1052
18	Nonlinear Methods and Chaos	1059
18.1	Introduction	1059
18.2	The Logistic Map	1060
18.3	Sensitivity to Initial Conditions	1064
18.4	Nonlinear Differential Equations	1068
Appendix 1 Real Zeros of a Function		1085
Appendix 2 Gaussian Quadrature		1089
Index		1097
