

Part I
SPECTRAL AND OPTICAL METHODS

Chapter 1	1
SPECTRAL DIAGNOSTICS METHODS	1
1.1 Integral relationships. Optical measurement circuits	4
1.2 Spectral emission line	16
1.3 Width and shift of spectral lines	22
1.4 Continuous spectrum	25
1.5 Kirchhoff law	27
1.6 Spectral absorption lines	28
Chapter 2	32
KINETIC ENERGY, TRANSLATIONAL RELAXATION AND DOPPLER BROADENING OF LINES IN NON-EQUILIBRIUM PLASMA SPECTRA	32
2.1 Introduction	32
2.2 Determination of the type of velocity distribution of excited particles from spectral measurements	34
2.3 Velocity distribution of atoms and molecules in excited electronic states ..	35
2.4 Measurement of gas temperature from Doppler broadening of spectral lines	37
2.5 A simple model of relaxation of the mean kinetic energy. Effect of gas density	41
2.6 Identification of excitation mechanisms	45
Chapter 3	50
OPTICAL ACTINOMETRY OF PLASMA	50
Chapter 4	59
LASER METHODS OF PLASMA DIAGNOSTICS	59
4.1 Introduction	59
4.2 Interference examination of plasma using lasers	59
4.3 Holographic plasma diagnostic methods	74
4.4 Plasma diagnostics on the basis of scattering of laser radiation	95
Chapter 5	127
SPECTROSCOPY OF GROUND ELECTRONIC STATES OF MOLECULES IN PLASMA USING TUNABLE LASERS	127
5.1 Diode spectroscopy	127
5.2 CALS spectroscopy	136

Chapter 6	147
DETERMINATION OF THE CONCENTRATION AND TEMPERATURE OF HEAVY PARTICLES FROM THE SPECTRA OF RAYLEIGH-SCATTERED LIGHT	147
6.1 Introduction	147
6.2 Principles of the method	147
6.3 Concentration and temperature of gas in flames and electric arc	151
6.4 Plasma jet diagnostics	155
6.5 Gas temperature in glow discharge	158
 Chapter 7	 160
REFRACTOMETRIC PLASMA DIAGNOSTICS METHODS	160
7.1 Refractive index of plasma	160
7.2 Plasma interferometry	165
7.3 Shadow method	173
7.4 Diffraction interferometer based on IAB-451 shadow equipment for plasma investigations	177
7.5 Examination of the nature of the plasma flow	181
7.6 Temperature measurements by the interferometric method	189
 Chapter 8	 196
DIAGNOSTICS OF PLASMA FLOWS WITH A DISPERSED PHASE	196
8.1 Introduction	196
8.2 Methods of measuring particle size	199
8.3 Measuring the flow and particle velocities	203
8.4 Particle temperature	206
 Chapter 9	 207
MEASURING THE PLASMA FLOW VELOCITY BY THE TRACER PARTICLE METHOD	207

Part II
PROBE METHODS

Chapter 10	219
ELECTRIC PROBES IN NON-EQUILIBRIUM PLASMA	219
10.1 Introduction	219
10.2 Probe measurements of the energy distribution of electrons	221
10.3 Determination of plasma parameters from probe measurements	245
10.4 Selected problems of probe diagnostics	250
 Chapter 11	 258
ELECTRIC PROBES IN CONTINUUM REGIME	258
11.1 Introduction	258
11.2 A system of equations and boundary conditions of the hydrodynamic theory of electric probes	259

11.3 Volt-ampere characteristics of probes under hydrodynamic regimes	266
11.4 Diagnostic methods	275
11.5 Special features of experimental procedure	292
11.6 Comparison of theoretical and experimental results	294
11.7 Conclusion	297

Chapter 12	299
------------------	-----

PROBE METHODS OF DIAGNOSTICS OF CHEMICALLY REACTING DENSE PLASMA 299

12.1 Formulation of the problem and solution method	300
12.2 Numerical solution results	304
12.3 Experiments	305
12.4 Discussion of the results	306
12.5 Electric probes in special conditions	312
12.6 Diagnostics of dense chemically reacting still plasma with electric probes with a modulated potential	326

Chapter 13	338
------------------	-----

ELECTRIC AND THERMAL PROBES IN THE PRESENCE OF CHEMICAL REACTIONS IN NON-EQUILIBRIUM PLASMA. 338

13.1 Electric probe	338
13.2 Thermal probe	350

Chapter 14	356
------------------	-----

MEASUREMENTS OF THE ENTHALPY OF HIGH-TEMPERATURE GAS FLOWS 356

14.1 Introduction	356
14.2 Main methods of measuring the enthalpy of	357
high-temperature gas	357
14.3 Enthalpy sensors and probes	363
14.4 Sensitivity of the enthalpy sensor and measurement error	381
14.4 Conclusions	385

Chapter 15	386
------------------	-----

PROBE MEASUREMENTS OF HEAT FLOWS IN PLASMA JETS 386

15.1 Measurement procedure	386
15.2 Determination of plasma temperature	390

Part III

MACROSCOPIC DIAGNOSTICS

Chapter 16	394
------------------	-----

METHODS OF EXAMINING THE SPATIAL STRUCTURE OF RADIO-FREQUENCY CAPACITANCE DISCHARGES 394

16.1 Introduction	394
16.2 Specific features of producing, examining and using radio-frequency	

capacitance discharge plasma. Forms of existence of RFCD	395
16.3 Interpretation of volt–ampere characteristics of RFCD and their relationship with the spatial structure of the discharge	402
16.4 Constant electric fields in RFCD	415
16.5 Using the battery effect in examining RFCD	427
16.6 Effect of the frequency of RF field on the structure of the discharge and plasma characteristics	429
16.7 Active probing of RFCD using a constant electric current	434
16.8 The radial structure of the RF capacitance discharge	440
16.9 Optical methods of examining the spatial structure of the RF capacitance discharge	445
16.10 Conclusions	448
Chapter 17	449
WAVE BREAKDOWN IN DISTRIBUTED SYSTEMS	449
17.1 Introduction	449
17.2 History	450
17.3 Transition processes	454
17.4 Generalised block diagram of experiment	457
17.5 Spatial–time structure of breakdown waves. Effect of preliminary ionisation	469
17.6 Electrodynamic processes in wave breakdown	471
17.7 X-radiation during a wave breakdown	490
17.8 Initiation of laser radiation by the breakdown wave.....	494
17.9 Effect of the type of gas	496
17.10 Current state of the theory of wave breakdown	497
17.11 Wave breakdown - a method of examining processes in plasma	501
17.12 Conclusion	505
Chapter 18	506
PROBE MEASUREMENTS OF POTENTIAL DISTRIBUTION IN DENSE PLASMA	506
18.1 Special features of the method	506
18.2 Electric field of the high-current arc	510
18.3 Electric field in the laminar plasma jet of the electric arc plasma torch	515
18.4 The electric field of the plasma flow of a two-jet plasma torch	518

Part IV

METHODS OF PROCESSING RESULTS AND AUTOMATION OF DIAGNOSTICS

Chapter 19	522
REDUCTION TO A UNIFORM LAYER IN AXISYMMETRIC OBJECTS	522
19.1 Smoothing experimental data	522

19.2 Numerical solution of Abel's integral equation	524
19.3 Numerical solution of the Volterra integral equation	527
19.4 Simplified reduction algorithms	532
Chapter 20	538
RECONSTRUCTION OF VELOCITY DISTRIBUTION FUNCTIONS OF EMITTING PARTICLES FROM THE SHAPE OF THE CON- TOUR OF SPECTRAL LINES	538
Chapter 21	545
AUTOMATION OF MEASUREMENTS IN PLASMA DIAGNOS- TICS	545
REFERENCES	541
INDEX	569
