

1. Introduction to the Physics of Distributed Bistable Systems	1
1.1 Types of Optical Bistability, Nonlinearity, and Feedback	1
1.1.1 Bistability, Multistability, and Hysteresis	1
1.1.2 Absolute and Convective Bistability	3
1.1.3 Conditions of Bistability	4
1.1.4 Types of Optical Bistability	5
1.1.5 Increasing Absorption Optical Bistability	6
1.1.6 Electro-optical Schemes	7
1.1.7 Nonlinear Cavities (Interferometers)	7
1.1.8 Nonlinear Reflection	7
1.1.9 Bistable Lasers	8
1.2 Transverse and Longitudinal Distributivity; Componency	8
1.3 Why Study Distributed Bistable Systems?	10
1.4 First Investigations of Distributed Optical Bistable Systems	13
2. Increasing Absorption Bistability	17
2.1 Model and Initial Equations	18
2.2 Bistability of Point Systems.....	21
2.2.1 Stationary States.....	22
2.2.2 Kinetics.....	23
2.2.3 Effect of Noise	27
2.3 Steady-State Distributions in a One-Dimensional System	30
2.3.1 Mechanical Analogy	30
2.3.2 Stationary Inhomogeneous Distributions.....	33
2.4 Stability of Steady-State Distributions	36
2.5 Switching Waves	38
2.5.1 Switching Waves and the Mechanical Analogy.....	38
2.5.2 Stable and Unstable Switching Waves	40
2.5.3 Numerical Simulations	43
2.6 Spatial Switching	44

2.7	Wide Radiation Beam	48	4.5	Structures for Other Nonlinearities	123
2.7.1	Asymptotic Analysis	48	4.5.1	Switching Waves	124
2.7.2	Spatial Bistability	52	4.5.2	Metastability and Kinetics of Local Perturbations	125
2.8	Spatial Hysteresis	54	4.5.3	Dissipative Optical Solitons	127
2.9	Systems with Sharp Transverse Inhomogeneity	56	4.6	Effect of Inhomogeneities	135
2.10	Longitudinal and Transverse Distributivity	60	4.6.1	Switching Waves	136
2.10.1	Longitudinal Distributivity	61	4.6.2	Spatial Hysteresis	137
2.10.2	Joint Longitudinal and Transverse Distributivity	62	4.6.3	Oblique Incidence	139
2.11	Other Factors; Bibliography	64	4.6.4	"Mechanics" of Dissipative Solitons	143
2.11.1	Two-Dimensional Transverse Distributivity	64	4.6.5	Dissipative Solitons and Spatial Hysteresis	147
2.11.2	Fluctuations	65	4.7	Switching Waves and Solitons in Conditions of Instability	148
2.11.3	Effect of Delay	66	4.7.1	Plane-Wave Excitation	148
2.11.4	Isolated Loops	66	4.7.2	Excitation with a Radiation Beam	152
2.11.5	Componency	66	4.7.3	Effect of Transverse Instability	155
2.11.6	Experiments	67	4.8	Effect of Componency	156
3.	Hybrid Bistable Devices	69	4.8.1	Model of a Magneto-optic Interferometer	157
3.1	Stationary, Periodic, and Chaotic Regimes	69	4.8.2	Homogeneous Stationary and Nonstationary Regimes	158
3.2	Effect of Finite Feedback Bandwidth	77	4.8.3	Modulation Instability	161
4.	Driven Nonlinear Interferometers	83	4.8.4	Polarized Dissipative Optical Solitons	162
4.1	Models of Nonlinear Interferometers	84	4.8.5	Related Schemes	163
4.1.1	Driven Ring Interferometers	84	4.9.	Bibliography; Experiments	169
4.1.2	Model of Transverse Distributivity	88	4.9.1	Instabilities Related to Longitudinal Distributivity	169
4.1.3	Model of a Nonlinear Screen	91	4.9.2	Wide-Aperture Semiconductor Microresonators	170
4.1.4	Transversely Confined and Point Schemes	92	4.9.3	Instabilities of the Transverse Field Structure	170
4.1.5	Model of Slow Nonlinearity	93	4.9.4	Switching Waves and Spatial Hysteresis	172
4.2	Stability of Stationary Regimes	94	4.9.5	Dissipative Optical Solitons	174
4.2.1	Self-pulsations	95	5.	Nonlinear Radiation Reflection	177
4.2.2	Modulation Instability	97	5.1	Reflection of Plane Wave from Transparent Nonlinear Media	177
4.3	Instabilities of Transverse Field Structure	101	5.1.1	Nonlinear Layer	177
4.3.1	Matrix Representation	101	5.1.2	Nonlinear Half-Space	181
4.3.2	Cavities Without and with Magnification	104	5.2	A Weakly Absorbing Nonlinear Medium	189
4.4	Model of Threshold Nonlinearity	108	5.3	Nonlinear Reflection of Beams	196
4.4.1	General Solution	108	5.3.1	Boundary Conditions	196
4.4.2	Switching Waves	109	5.3.2	Paraxial Approach	199
4.4.3	Stability of Switching Waves	111	5.3.3	Nonparaxial Approach: Bistability of Beam Reflection	201
4.4.4	Switching Waves: Influence of Inhomogeneities	113	5.4	Discussion and References	203
4.4.5	Single Localized Structures	114	6.	Bistable Laser Schemes	207
4.4.6	Stability of Dissipative Optical Solitons	115	6.1	Model and General Relations	207
4.4.7	Dissipative Solitons: Effect of Inhomogeneities	118	6.1.1	Laser Model	207
4.4.8	Cylindrically Symmetric Solitons	121	6.1.2	Maxwell-Bloch Equations	208
4.4.9	Combined Switching Waves	121	6.1.3	Energy Balance	210
4.4.10	Bound Dissipative Optical Solitons	122			
4.4.11	The Case of Multistability	123			

6.1.4	Symmetry	211
6.1.5	Monochromatic Plane-Wave Solutions	212
6.1.6	Modulation Instability	213
6.2	Transversely One-Dimensional Structures	213
6.2.1	Fast Nonlinearity	213
6.2.2	Effect of Relaxation Rates	219
6.3	Transversely Two-Dimensional Structures	225
6.3.1	Stripes	225
6.3.2	Cylindrically Symmetric Intensity Distribution	226
6.3.3	Asymmetric Rotating Laser Solitons	227
6.3.4	Nonparaxial Laser Solitons	230
6.4	Interaction of Laser Solitons	231
6.4.1	Conditions of “Galilean Symmetry”	231
6.4.2	Regimes of Weak Overlapping.....	232
6.4.3	Multisoliton Structures.....	239
6.4.4	Effect of Relaxation	240
6.5	Effect of Smooth and Sharp Inhomogeneities	242
6.5.1	Smooth Inhomogeneities	242
6.5.2	Sharp Inhomogeneities (Mirror Edges)	243
6.6	Laser Bullets – Three-Dimensional Laser Solitons	246
6.6.1	Bifurcation Analysis	247
6.6.2	Formation of Laser Bullets	249
6.6.3	Interaction of Laser Bullets	251
6.6.4	Nonparaxial Effects	252
