Notation	XV
1. Introduction	1
1.1 Space Missions	1
1.2 Interdisciplinary Stimuli	6
1.3 Problems of Fluid Physics	9
1.4 Zero Mass Acceleration or Weightlessness	13
1.5 Flight Selection and Simulation	15
References	18
2. Interface Tension and Contact Angle	21
2.1 Molecular Attraction and Condensation	21
2.2 The Interface Tension	24
2.2.1 Theoretical Aspects	24
2.2.2 Experimental Methods	25
2.2.3 Qualitative Rules for the Interface Energy	27
2.3 The Static Contact Angle	30
2.4 The Dynamic Contact Angle	31
2.5 Merging of Drops and Bubbles	35
2.6 Adhesion Forces in Liquid Films	37
References	38
3. Capillary Shape and Stability	41
3.1 Balance of Forces	41
3.2 Minimization of Energy	44
3.3 Analytical Solutions of the Capillary Equation	47
3.3.1 Rise of Liquid in a Tube	47
3.3.2 Spherical Surfaces	49
3.3.3 Rise of a Liquid in Contact with an Infinite Plane ..	51
3.4 Axisymmetric Surfaces	52
3.5 Container Shape and Wetting	57
3.6 Drops at Low Bond Numbers	59

3.7	Representations of the Capillary Equation	61	6.0	Liquid Zones	119
3.7.1	Cartesian Coordinates $z(x, y)$	62	6.1	Liquid Bridges Between Parallel Plates	119
3.7.2	Polar Coordinates $r(\vartheta, \varphi)$	62	6.1.1	Introduction	119
3.7.3	Cylindrical Coordinates $r(\varphi, z)$	63	6.1.2	Branches of Solutions of the Capillary Equation	120
3.7.4	Cylindrical Coordinates $z(r, \varphi)$	63	6.1.3	Properties of the Inflection Point	123
3.7.5	Axisymmetry	64	6.1.4	The Instability Due to the Bifurcation (Due to $D\{1, 0\}$)	125
	References	65	6.1.5	The Instability Due to the Minimum Volume (Due to $D\{2, 0\}$)	127
4.0	Stability Criteria	67	6.1.6	Differing Contact Angles	129
4.1	Stability of Capillary Surfaces	67	6.1.7	Gravity	129
4.2	Breakage of Cylindrical Surfaces	69	6.1.8	Key Points	134
4.3	Second Variation of Energy	73	6.2	Double Float Zones	135
4.4	Normal Deformations of Liquid Zones	75	6.2.1	Introduction	135
4.4.1	Instabilities of Periodic Surfaces	75	6.2.2	Unduloids and Nodoids	137
4.4.2	Normal Deformations of a Circular Cylinder	76	6.2.3	Branches of Solutions	138
4.4.3	The Symmetric Instability of the Catenoid	77	6.2.4	Results of the Spacelab Experiments	141
4.5	Nonaxisymmetric Instabilities	79	6.2.5	The Stability Diagram	143
4.5.1	Lateral Deformations of the Center Line	79	6.2.6	Key Points	145
4.5.2	Liquid Rings	81		References	147
4.6	The Minimum-Volume Condition	83	7.0	Canthotaxis/Wetting Barriers/Pinning Lines	149
4.7	Linear Stability Analysis	85	7.1	Introduction	149
	References	87	7.2	Straight Wetting Barriers	151
5.0	Axisymmetric Liquid Columns at Rest and Under Rotation	89	7.2.1	The Wetting Tile	151
5.1	Introduction	89	7.2.2	The Wetting Stripe	153
5.2	The Normal Deformations	90	7.2.3	The Wetting Cross	154
5.2.1	The Symmetric Mode $D\{2, 0\}$	92	7.2.4	Circular Tubes	155
5.2.2	The Antimetric Mode $D\{1, 0\}$	94	7.2.5	Large Liquid Volumes	157
5.2.3	The Lateral Instability $D\{0, 1\}$	96	7.3	Liquid Surfaces in Wedges	158
5.2.4	Stability of a Liquid Ring	98	7.4	Taylor Expansions at Small Radii	162
5.3	Nearly Cylindrical Surfaces	101	7.4.1	Alternative Winding Functions	162
5.3.1	Fourier Expansion of an Axisymmetric Surface	101	7.5	Liquid Surfaces in Square Cylinders, $\cos \gamma_1 + \cos \gamma_2 = 0$	164
5.3.2	The Symmetric Instability $D\{2, 0\}$	102	7.6	Towards Modeling Canthotaxis	169
5.3.3	The Antimetric Instability $D\{1, 0\}$	102	7.6.1	Helicoid and Catenoid	169
5.3.4	The Lateral Mode $D\{0, 1\}$	103	7.6.2	Winding Rates $[\partial z(\varphi)/\partial \varphi]_{r=0} \propto [\cos(s\varphi)]^k$	170
5.3.5	Nonzero Bond Number	104	7.6.3	Winding Rate of Infinity	171
5.4	Rotating Free Drops	106	7.6.4	Circular Tube with Complementary Contact Angles	172
5.4.1	Motivation	106		References	177
5.4.2	Shape of Rotating Drops	107	8.0	Cylindrical Containers	179
5.4.3	Stability	110	8.1	Introduction	179
5.4.4	Conservation of Angular Momentum	113	8.1.1	Fields of Application	179
5.4.5	Finite-Element Analysis	114	8.1.2	Liquids in Edges	180
	References	117			

8.2	The Integral Theorem for Cylindrical Vessels	182
8.2.1	Application of Divergence Theorem	182
8.2.2	Minimization of Energy with Respect to Height	183
8.2.3	Evaluation of Wedge Contributions	185
8.3	Examples	186
8.3.1	Ice Cream Cone	186
8.3.2	Rhombic Cylinder	188
8.3.3	Regular Polygon	190
8.3.4	Liquid in a Rotating Wedge	192
8.3.5	No Wetting of Wedge	193
8.3.6	Liquid Volume Pressed into a Wedge	195
8.4	Stability of Convex Cylindrical Surfaces	199
8.4.1	Longitudinal Normal Deformations	199
8.4.2	Axially Periodic Meniscus Shapes	200
8.4.3	Adjustment to Fit Solid Edges	201
8.4.4	Volume and Energy	203
8.4.5	Rotating Wedges	205
8.5	The MAXUS Experiment DYLCO	205
	References	211
9.	Liquid Surfaces in Polyhedral Containers	213
9.1	Spherical Surfaces at Edges and Corners	213
9.1.1	Nonwetting Drops	213
9.1.2	Drops in Planar Wedges	214
9.1.3	Drops in Spherical Wedges	216
9.1.4	Liquid Drops in a Tripod	217
9.1.5	Regular N -Pods	217
9.2	Transition Between the Corner and the Wedge	222
9.2.1	Liquid Volumes in Polyhedra	222
9.2.2	Exponential Piling-Up in Corners	223
9.2.3	Numerical Calculation of Corner Volume	225
9.2.4	Similarity of Corner Volumes	228
9.2.5	Finite Wedge Length	229
9.2.6	Accuracy of the Present Approach	231
9.2.7	Prospects	232
	References	233
10.	Playing with Stability	235
10.1	Proboscides	235
10.1.1	Finite Rhombic Prisms	235
10.1.2	Canonical Proboscides	238
10.1.3	Interface Configuration Experiment	241
10.2	Exotic Containers	246
10.2.1	Circular Tubes with Unusual Properties	246
10.2.2	Adjustment of Container Shape	249
10.2.3	Integration of Container Shape	251

10.2.4	Mismatch of Volume and/or Contact Angle	253
10.2.5	Residual Gravity	254
10.2.6	Drop Tower Tests	256
	References	258
11.	Liquid Penetration into Tubes and Wedges	259
11.1	About the Momentum, or Navier–Stokes, Equation	259
11.2	Penetration into Capillaries	261
11.2.1	Cylindrical Vessels	261
11.2.2	Liquid Rise in Capillaries	263
11.2.3	Liquid Penetration into Wedges	264
11.2.4	Similarity Solutions for Long Times	266
11.2.5	Numerical Solution	269
11.3	Dynamics of Liquids in Edges and Corners	272
11.3.1	The DYLCO Experimental Module	272
11.3.2	Drop Towers Tests for DYLCO	273
11.3.3	Conduct of the IML-2 Experiment	274
11.3.4	Results of the DYLCO IML-2 Experiment	276
11.4	The Geometric Friction Coefficient Φ	278
11.4.1	Flow in Rectangular Tubes	278
11.4.2	Flow in Parallelograms	283
	References	285
12.	Oscillations of Liquid Columns	287
12.1	Introduction	287
12.2	Theory	288
12.2.1	Infinite Liquid Columns	290
12.2.2	The Free Fluid Surface	291
12.2.3	Natural Frequencies	292
12.2.4	Finite Liquid Columns	292
12.2.5	Axially Damped Oscillations	294
12.2.6	Symmetric and Antimetric Oscillations	295
12.2.7	Resonance Detection and Flow Patterns	297
12.3	Experiments	302
12.3.1	Short Liquid Columns	302
12.3.2	Plateau Simulation	303
12.3.3	Automatic Resonance Detection	305
12.3.4	The LICOR Runs	308
12.4	Lateral Oscillations of Liquid Bridges	312
12.4.1	Damped Harmonic Oscillations	312
12.4.2	Periodic Lateral Deformations	314
12.4.3	Coupled Damped Oscillations	316
	References	321
