TABLE OF CONTENTS

Chapter 1. Introduction 1

Part 1: Fundamental Concepts

Chapter 2. Scattered Field FDTD Formulation 11
2.1 Maxwell Curl Equations 11
2.2 Separate Field Formalism 12
2.3 Perfect Conductor FDTD Formulation 16
2.4 Perfect Conductor FDTD FORTRAN Code 19
2.5 Lossy Material Formulation 20
2.6 Lossy Dielectric FDTD FORTRAN Code 22
2.7 FDTD Code Requirements and Architecture 24
References 27

Chapter 3. FDTD Basics 29
3.1 Introduction 29
3.2 Determining the Cell Size 30
3.3 Time Step Size for Stability 32
3.4 Specifying the Incident Field 33
3.5 Building an Object in Yee Cells 37
3.6 Direct Computation of Total Fields 42
3.7 Radiation Boundary Condition 43
3.8 Resource Requirements 46
References 49

Part 2: Basic Applications

Chapter 4. Coupling Effects 53
4.1 Introduction 53
4.2 Electromagnetic Pulse 54
4.3 Exterior Pulse Response 55
4.3.1 Measurement Facility 55
4.3.2 FDTD Model of the Aircraft 56
4.3.3 Comparison of Predictions and Measurements 58
4.4 Interior Electromagnetic Shielding 61
4.4.1 Frequencies Above Aperture Cutoff 62
4.4.2 Frequencies Below Aperture Cutoff 70
References 76

Chapter 5. Waveguide Aperture Coupling (Article by P. Alinikula and K. S. Kunz) 79
5.1 Introduction 79

5.2 Approach 79
5.3 Results 81
5.4 Conclusion 84
Acknowledgment 85
References 85

Chapter 6. Lossy Dielectric Scattering 87
6.1 Introduction 87
6.2 Interpretation of the Scattered Field Method 87
6.3 Near Zone Sphere Scattering 90
6.3.1 Incident Field 90
6.3.2 Special Notes 90
6.3.3 Predictions 91
6.4 Human Body Absorption 91
References 101

Part 3: Special Capabilities

Chapter 7. Far Zone Transformation 105
7.1 Introduction 105
7.2 Three-Dimensional Transformation 107
7.3 Two-Dimensional Transformation 113
7.4 Summary 118
References 122

Chapter 8. Frequency-Dependent Materials 123
8.1 Introduction 123
8.2 First Order Debye Dispersion 124
8.3 First Order Drude Dispersion 131
8.4 Second Order Dispersive Materials 139
8.5 Multiple Poles 146
8.6 Differential Method 151
8.7 Scattered Field Formulation 154
References 161

Chapter 9. Surface Impedance 163
9.1 Introduction 163
9.2 Constant Parameter Materials 166
9.3 Frequency-Dependent Materials 169
9.4 Recursive Evaluation 172
9.5 Demonstrations 175
References 183

Chapter 10. Subcellular Extensions 185
10.1 Introduction 185

10.2 Integration Contours 185
10.3 Thin Wires 188
10.4 Lumped Circuit Elements 190
10.5 Expansion Techniques 194
10.6 Code Requirements, Limitations, and Utility 199
References 200

Chapter 11. Nonlinear Loads and Materials 203
11.1 Introduction 203
11.2 Antenna with Nonlinear Diode 204
11.3 Nonlinear Magnetic Sheet 216
References 229

Chapter 12. Visualization 231
12.1 Introduction 231
12.2 Types of Visualization 231
12.3 Examples 234
12.3.1 Model Fidelity 234
12.3.2 Model Response 234
12.3.3 Physical Process Insight 235
12.3.4 Intuition Building 235
12.4 Resources and Cost of Visualization 237
References 238

Part 4: Advanced Applications

Chapter 13. Far Zone Scattering 241
13.1 Introduction 241
13.2 Fundamentals 243
13.3 Staircase Errors 244
13.4 Impedance Sheets 251
13.5 Distance to Outer Boundary 254
13.6 Frequency-Dependent Materials 259
References 261

Chapter 14. Antennas 263
14.1 Introduction 263
14.2 Impedance, Efficiency, and Gain 265
14.3 Monopole Antenna on a Conducting Box 279
14.4 Shaped-End Waveguide Antenna 290
References 297

Chapter 15. Gyrotropic Media 299
15.1 Introduction 299

15.2 Magnetized Plasma 299
15.3 Magnetized Ferrites 308
References 322

Part 5: Mathematical Basis of FDTD and Alternate Methods

Chapter 16. Difference Equations in General 327
16.1 Introduction 327
16.2 Differencing Schemes for Hyperbolic Equations 330
16.3 Permutations on the Leapfrog Technique 333
References 334

Chapter 17. Stability, Dispersion, Accuracy 335
17.1 Introduction 335
17.2 Stability 336
17.3 Numerical Dispersion 339
17.4 Accuracy 345
Reference 346

Chapter 18. Outer Radiation Boundary Conditions 347
18.1 Introduction 347
18.2 Evolution of ORBCs 348
18.3 Mur Outer Radiation Boundary Condition 349
18.4 Alternate Formulations of the One-Way Wave Equations 356
References 358

Chapter 19. Alternate Formulations 359
19.1 Introduction 359
19.2 Total Field Formation 359
19.3 Potential Formulation 360
19.4 Implicit Schemes 363
19.5 High Frequency Approximation 363
19.5.1 Time Domain Smythe-Kirchhoff Aperture Approximation and Method of Images for High FDTD Frequency Modeling 363
19.6 Acoustic Analog/Scalar Equivalent 365
19.6.1 Equation of Motion 365
19.6.2 Gas Law 366
19.6.3 Continuity Equation 366
References 367

Appendix A. Other Coordinate Systems and Reduced Dimensions 369
Introduction 369
3-D Cylindrical and Spherical 370

2-D Cylindrical 383
1-D Cartesian and Cylindrical 386
References 389

Appendix B. FORTRAN Listings 391
Description 391
FDTDA.FOR 391
COMMONA.FOR 424
DIAGS3D.DAT 426
NZOUT3D.DAT 427

Index 435
