
Contents

Part I: Introduction

Chapter 1	Introduction to the handbook.....	3
1.1	Terminology.....	3
1.2	Past and present phosphor research.....	4
1.3	Applications of phosphors.....	5
1.4	Contents of the handbook.....	6

Part II: Fundamentals of phosphors

Chapter 2	Fundamentals of luminescence.....	11
2.1	Absorption and emission of light.....	11
2.2	Electronic states and optical transition of solid crystals.....	21
2.3	Luminescence of localized centers.....	35
2.4	Impurities and luminescence in semiconductors.....	49
2.5	Luminescence of organic compounds.....	61
2.6	Luminescence of low-dimensional systems.....	71
2.7	Transient characteristics of luminescence.....	85
2.8	Excitation energy transfer and cooperative optical phenomena.....	101
2.9	Excitation mechanism of luminescence by cathode-ray and ionizing radiation.....	113
2.10	Inorganic electroluminescence.....	123
Chapter 3	Principal phosphor materials and their optical properties.....	141
3.1	Luminescence centers of ns^2 -type ions.....	141
3.2	Luminescence centers of transition metal ions.....	153
3.3	Luminescence centers of rare-earth ions.....	178
3.4	Luminescence centers of complex ions.....	201
3.5	Ia-VIIb compounds.....	213
3.6	IIa-VIb compounds.....	217
3.7	IIf-VIb compounds.....	231
3.8	ZnSe and related luminescent materials.....	259
3.9	IIIb-Vb compounds.....	267
3.10	(Al,Ga,In)(P,As) alloys emitting visible luminescence.....	277
3.11	(Al,Ga,In)(P,As) alloys emitting infrared luminescence.....	285

3.12	GaN and related luminescence materials	293
3.13	Silicon carbide (SiC) as a luminescence material.....	307

Part III: Practical phosphors

Chapter 4	Methods of phosphor synthesis and related technology	317
4.1	General technology of synthesis.....	317
4.2	Surface treatment.....	331
4.3	Coating methods	337
4.4	Fluorescent lamps.....	343
4.5	Mercury lamps.....	348
4.6	Intensifying screens (Doctor Blade Method)	348
4.7	Dispersive properties and adhesion strength.....	351
Chapter 5	Phosphors for lamps.....	359
5.1	Construction and energy conversion principle of various lamps	359
5.2	Classification of fluorescent lamps by chromaticity and color rendering properties	367
5.3	High-pressure mercury lamps	375
5.4	Other lamps using phosphors.....	379
5.5	Characteristics required for lamp phosphors.....	383
5.6	Practical lamp phosphors.....	389
5.7	Phosphors for high-pressure mercury lamps	433
Chapter 6	Phosphors for cathode-ray tubes.....	445
6.1	Cathode-ray tubes	445
6.2	Practical phosphors.....	459
6.3	Practical phosphors.....	489
6.4	Phosphors for observation tubes	499
6.5	Phosphors for special tubes.....	502
6.6	Listing of practical phosphors for cathode-ray tubes	509
Chapter 7	Phosphors for X-ray and ionizing radiation	521
7.1	Phosphors for X-ray intensifying screens and fluorescent screens.....	521
7.2	Phosphors for thermoluminescent dosimetry	531
7.3	Scintillators	539
7.4	Phosphors for X-ray image intensifiers	549
7.5	Photostimulable phosphors for radiographic imaging.....	553
Chapter 8	Phosphors for vacuum fluorescent displays and field emission displays	561
8.1	Vacuum fluorescent displays.....	561
8.2	Field emission displays	573

Chapter 9	Electroluminescence materials	
9.1	Inorganic electroluminescence materials.....	581
9.2	Inorganic electroluminescence	601
9.3	Organic electroluminescence	613
Chapter 10	Phosphors for plasma displays.....	623
10.1	Plasma display panels	623
10.2	Discharge gases.....	626
10.3	Vacuum-ultraviolet phosphors and their characteristics.....	627
10.4	Characteristics of full-color plasma display panel	635
Chapter 11	Organic fluorescent pigments	637
11.1	Daylight fluorescence and fluorescent pigments.....	637
11.2	Manufacturing methods of fluorescent pigments.....	639
11.3	Use of fluorescent pigments.....	641
Chapter 12	Other phosphors.....	643
12.1	Infrared up-conversion phosphors.....	643
12.2	Luminous paints.....	651
12.3	Phosphors for marking.....	659
12.4	Stamps printed with phosphor-containing ink.....	659
12.5	Application of near-infrared phosphors for marking.....	660
Chapter 13	Solid-state laser materials	665
13.1	Introduction.....	665
13.2	Basic laser principles.....	666
13.3	Operational schemes.....	669
13.4	Materials requirements for solid-state lasers.....	670
13.5	Activator ions and centers	672
13.6	Host lattices	673
13.7	Conclusions	676

Part IV: Measurements of phosphor properties

Chapter 14	Measurements of luminescence properties of phosphors.....	683
14.1	Luminescence and excitation spectra.....	684
14.2	Reflection and absorption spectra	684
14.3	Transient characteristics of luminescence	684
14.4	Luminescence efficiency	684
14.5	Data processing.....	684
14.6	Measurements in vacuum-ultraviolet region	727
Chapter 15	Measurements of powder characteristics.....	733
15.1	Particle size and its measurements	684
15.2	Methods for measuring particle size	739
15.3	Measurements of packing and flow.....	756

Part V: Related important items

Chapter 16	Optical properties of powder layers.....	763
16.1	Kubelka-Munk's theory.....	763
16.2	Johnson's theory.....	777
16.3	Monte Carlo method.....	789
Chapter 17	Color vision.....	799
17.1	Color vision and the eye.....	800
17.2	Light and color.....	802
17.3	Models of color vision.....	803
17.4	Specification of colors and the color systems.....	805
17.5	The color of light and color temperature.....	812
17.6	Color rendering.....	814
17.7	Other chromatic phenomena.....	816

Part VI: History

Chapter 18	History of phosphor technology and industry.....	821
18.1	Introduction.....	821
18.2	Phosphors for fluorescent lamps.....	822
18.3	Phosphors for high-pressure mercury vapor lamps.....	834
18.4	Phosphors for black-and-white picture tubes.....	835
18.5	Phosphors for color picture tubes.....	839
18.6	Phosphors for X-ray.....	843
18.7	A short note on the history of phosphors.....	847
18.8	Production of luminescent devices utilizing phosphors.....	848
18.9	Production of phosphors.....	850
Subject index.....		859
Chemical formula index.....		899
