Preface	v
List of Major Symbols	xv
1 Introduction to Bifurcation Behavior	1
1.1 Introduction	1
1.2 Simple Examples of Bifurcation Behavior	2
1.2.1 One-Degree-of-Freedom System	2
1.2.2 Two-Degree-of-Freedom System	5
1.3 Overview of the Book	8
1.3.1 Imperfection Sensitive Bifurcation Behavior	8
1.3.2 Critical Initial Imperfection of Structural Systems	10
1.3.3 Random Variation of Initial Imperfections	16
1.3.4 Experimentally Observed Bifurcation Diagrams	17
1.3.5 Bifurcation of Symmetric Systems	19
1.3.6 Recursive Bifurcation and Mode Switching of Sands	22
1.3.7 Echelon Modes on Uniform Materials	26
1.3.8 Recursive Bifurcation of Steel Specimens	30
1.4 Summary	32
I Imperfect Behavior at Simple Critical Points	33
2 Critical Points and Local Behavior	36

2.1	Introduction	36	5.2	Probability Density Functions of Critical Loads	102
2.2	General Framework	37	5.3	Evaluation of Probability Density Functions	108
2.3	Illustrative Example	41	5.4	Distribution of Minimum Values	108
2.4	Liapunov–Schmidt Reduction	45	5.5	Scatter of Critical Loads of Structures	111
2.4.1	Reduction Procedure	45	5.5.1	Propped Cantilever	112
2.4.2	Criticality Condition	47	5.5.2	Beam on a Nonlinear Foundation	115
2.4.3	Direction of Bifurcated Paths	49	5.6	Appendix: Derivation of Scaling Factors	118
2.4.4	Stability	50	5.7	Problems	119
2.4.5	Expansion into Power Series	50	5.8	Summary	121
2.5	Classification of Simple Critical Points	52	6	Experimentally Observed Bifurcation Diagrams	122
2.5.1	Limit Point	54	6.1	Introduction	122
2.5.2	Transcritical Bifurcation Point	56	6.2	Illustrative Example	125
2.5.3	Pitchfork Bifurcation Point	57	6.3	Imperfection Sensitivity Laws	126
2.6	Bifurcation Behavior of a Propped Cantilever	62	6.3.1	The Koiter Two-Thirds Power Law	126
2.7	Problems	65	6.3.2	Generalized Koiter Law	128
2.8	Summary	66	6.3.3	Laws for Experimentally Observed Bifurcation Diagrams	129
3	Imperfection Sensitivity Laws	67	6.4	Recovering the Perfect System from Imperfect Systems .	134
3.1	Introduction	67	6.4.1	Recovery from a Single Imperfect Path	135
3.2	Imperfection Sensitivity Laws	68	6.4.2	Recovery from a Series of Imperfect Paths	136
3.2.1	Limit Point	69	6.5	Numerical and Experimental Examples	137
3.2.2	Transcritical Bifurcation Point	70	6.5.1	Regular-Hexagonal Truss Dome	137
3.2.3	Pitchfork Bifurcation Point	71	6.5.2	Rectangular Plates	141
3.2.4	Systematic Derivation	72	6.5.3	Sand Specimens	143
3.3	Imperfection Sensitivity of Structures	75	6.6	Problems	149
3.3.1	Propped Cantilever	75	6.7	Summary	149
3.3.2	Truss Arches	76	II	Imperfect Bifurcation of Symmetric Systems	151
3.4	Problems	81	7	Group-Theoretic Bifurcation Theory	155
3.5	Summary	81	7.1	Introduction	155
4	Critical Initial Imperfection (I)	82	7.2	Bifurcation due to Reflection Symmetry	156
4.1	Introduction	82	7.3	Preliminaries on Group Representation	158
4.2	Illustrative Example	83	7.4	Symmetry of Equations	163
4.3	Theory of Critical Initial Imperfection	87	7.4.1	Group Equivariance of the Governing Equation .	163
4.3.1	Formulation	87	7.4.2	Liapunov–Schmidt Reduction	166
4.3.2	Derivation	89	7.4.3	Equivariance of the Jacobian Matrix	172
4.4	Imperfection with Multiple Categories	91	7.5	Symmetry of Solutions	175
4.5	Critical Initial Imperfection of Truss Structures	93	7.6	Example of a Symmetric System	178
4.5.1	Truss Arches	93	7.7	Problems	181
4.5.2	Hexagonal Truss Dome	97	7.8	Summary	181
4.6	Problems	99	8	Bifurcation Behavior of D_n-Equivariant Systems	182
4.7	Summary	100			
5	Random Initial Imperfection (I)	101			
5.1	Introduction	101			

8.1	Introduction	182	10.2.3	Semiempirical Evaluation	257																																																																																																																																																																																													
8.2	Dihedral and Cyclic Groups	183	10.3	Distribution of Minimum Values	258																																																																																																																																																																																													
8.2.1	Definition of Groups	183	10.4	Scatter of Critical Loads of Structures and Materials	259																																																																																																																																																																																													
8.2.2	Irreducible Representations	186	10.4.1	Regular-Polygonal Truss Structures	259																																																																																																																																																																																													
8.3	Perfect Bifurcation Behavior	188	10.4.2	Cylindrical Material Specimens	262																																																																																																																																																																																													
8.3.1	Symmetry of Solutions	188	10.5	Problems	265																																																																																																																																																																																													
8.3.2	Recursive Bifurcation	192	10.6	Summary	265																																																																																																																																																																																													
8.4	Bifurcation of Dome Structures	193	11	Description of Bifurcation Behaviors	266																																																																																																																																																																																													
8.4.1	D_3 -Symmetric Regular-Triangular Dome	194	11.1	Introduction	266	8.4.2	C_6 -Symmetric Schewdler Dome	197	11.2	Perfect Bifurcation Behavior of Truss Domes	267	8.5	Bifurcation Equations for a Double Critical Point	198	11.3	Imperfect Behavior of Structures and Materials	268	8.6	Local Analysis near a Double Critical Point: Perfect System	203	11.3.1	Regular-Pentagonal Truss Dome	269	8.6.1	Bifurcated Branches	203	11.3.2	Sand Specimens	272	8.6.2	Stability	209	11.4	Problems	275	8.7	Local Analysis near a Double Critical Point: Imperfect System	212	11.5	Summary	275	8.7.1	Solution Curves	212	III	Modeling of Bifurcation Phenomena	277	8.7.2	Imperfection Sensitivity Laws	219	8.8	Experimentally Observed Bifurcation Diagrams	224	12	Bifurcation of Cylindrical Sand Specimens	281	8.8.1	Simple Bifurcation Point	224	12.1	Introduction	281	8.8.2	Double Bifurcation Point	225	12.2	Groups for Spatial Symmetry	285	8.9	Appendix: Alternative Stability Analysis for Bifurcated Branches	228	12.3	Experiments on Sand Specimens	289	8.10	Problems	231	12.3.1	Recursive Bifurcation Behavior	289	8.11	Summary	232	12.3.2	Mode Switching Behavior	297	9	Critical Initial Imperfection (II)	233	12.4	Appendix: Derivation of Bifurcation Rules	298	9.1	Introduction	233	12.4.1	Bifurcation of $D_{\infty h}$ - and D_{nh} -Equivariant Systems	299	9.2	Theory of Critical Initial Imperfection	234	12.4.2	Bifurcation of a D_{nd} -Equivariant System	305	9.2.1	Formulation	234	12.5	Problems	307	9.2.2	Exploiting Group Equivariance	237	12.6	Summary	307	9.2.3	Simple Critical Points	240	13	Echelon-Mode Formation	308	9.2.4	Double Critical Points	241	13.1	Introduction	308	9.3	Resonance of Symmetry	242	13.2	Underlying Symmetries	313	9.4	Critical Imperfection of Symmetric Truss Structures	243	13.3	Subgroups Representing Patterns of Interest	315	9.4.1	Truss Tents	243	13.4	Recursive Bifurcation Leading to Echelon Modes	320	9.4.2	Regular-Hexagonal Truss Dome	246	13.5	Experiment on a Soil Specimen	322	9.5	Problems	249	13.6	Rectangular Plate with Periodic Boundaries	325	9.6	Summary	249	13.6.1	Underlying Symmetry	325	10	Random Initial Imperfection (II)	250	13.6.2	Numerical Analysis	327	10.1	Introduction	250	13.7	Image Simulations	331	10.2	Probability Density Functions of Critical Loads	251	13.7.1	Image Simulation Procedure	331	10.2.1	Formulation	251	13.7.2	Kaolin	334	10.2.2	Derivation of Probability Density Functions	252	13.7.3	Steel	337
11.1	Introduction	266																																																																																																																																																																																																
8.4.2	C_6 -Symmetric Schewdler Dome	197	11.2	Perfect Bifurcation Behavior of Truss Domes	267	8.5	Bifurcation Equations for a Double Critical Point	198	11.3	Imperfect Behavior of Structures and Materials	268	8.6	Local Analysis near a Double Critical Point: Perfect System	203	11.3.1	Regular-Pentagonal Truss Dome	269	8.6.1	Bifurcated Branches	203	11.3.2	Sand Specimens	272	8.6.2	Stability	209	11.4	Problems	275	8.7	Local Analysis near a Double Critical Point: Imperfect System	212	11.5	Summary	275	8.7.1	Solution Curves	212	III	Modeling of Bifurcation Phenomena	277	8.7.2	Imperfection Sensitivity Laws	219	8.8	Experimentally Observed Bifurcation Diagrams	224	12	Bifurcation of Cylindrical Sand Specimens	281	8.8.1	Simple Bifurcation Point	224	12.1	Introduction	281	8.8.2	Double Bifurcation Point	225	12.2	Groups for Spatial Symmetry	285	8.9	Appendix: Alternative Stability Analysis for Bifurcated Branches	228	12.3	Experiments on Sand Specimens	289	8.10	Problems	231	12.3.1	Recursive Bifurcation Behavior	289	8.11	Summary	232	12.3.2	Mode Switching Behavior	297	9	Critical Initial Imperfection (II)	233	12.4	Appendix: Derivation of Bifurcation Rules	298	9.1	Introduction	233	12.4.1	Bifurcation of $D_{\infty h}$ - and D_{nh} -Equivariant Systems	299	9.2	Theory of Critical Initial Imperfection	234	12.4.2	Bifurcation of a D_{nd} -Equivariant System	305	9.2.1	Formulation	234	12.5	Problems	307	9.2.2	Exploiting Group Equivariance	237	12.6	Summary	307	9.2.3	Simple Critical Points	240	13	Echelon-Mode Formation	308	9.2.4	Double Critical Points	241	13.1	Introduction	308	9.3	Resonance of Symmetry	242	13.2	Underlying Symmetries	313	9.4	Critical Imperfection of Symmetric Truss Structures	243	13.3	Subgroups Representing Patterns of Interest	315	9.4.1	Truss Tents	243	13.4	Recursive Bifurcation Leading to Echelon Modes	320	9.4.2	Regular-Hexagonal Truss Dome	246	13.5	Experiment on a Soil Specimen	322	9.5	Problems	249	13.6	Rectangular Plate with Periodic Boundaries	325	9.6	Summary	249	13.6.1	Underlying Symmetry	325	10	Random Initial Imperfection (II)	250	13.6.2	Numerical Analysis	327	10.1	Introduction	250	13.7	Image Simulations	331	10.2	Probability Density Functions of Critical Loads	251	13.7.1	Image Simulation Procedure	331	10.2.1	Formulation	251	13.7.2	Kaolin	334	10.2.2	Derivation of Probability Density Functions	252	13.7.3	Steel	337						
11.2	Perfect Bifurcation Behavior of Truss Domes	267																																																																																																																																																																																																
8.5	Bifurcation Equations for a Double Critical Point	198	11.3	Imperfect Behavior of Structures and Materials	268	8.6	Local Analysis near a Double Critical Point: Perfect System	203	11.3.1	Regular-Pentagonal Truss Dome	269	8.6.1	Bifurcated Branches	203	11.3.2	Sand Specimens	272	8.6.2	Stability	209	11.4	Problems	275	8.7	Local Analysis near a Double Critical Point: Imperfect System	212	11.5	Summary	275	8.7.1	Solution Curves	212	III	Modeling of Bifurcation Phenomena	277	8.7.2	Imperfection Sensitivity Laws	219	8.8	Experimentally Observed Bifurcation Diagrams	224	12	Bifurcation of Cylindrical Sand Specimens	281	8.8.1	Simple Bifurcation Point	224	12.1	Introduction	281	8.8.2	Double Bifurcation Point	225	12.2	Groups for Spatial Symmetry	285	8.9	Appendix: Alternative Stability Analysis for Bifurcated Branches	228	12.3	Experiments on Sand Specimens	289	8.10	Problems	231	12.3.1	Recursive Bifurcation Behavior	289	8.11	Summary	232	12.3.2	Mode Switching Behavior	297	9	Critical Initial Imperfection (II)	233	12.4	Appendix: Derivation of Bifurcation Rules	298	9.1	Introduction	233	12.4.1	Bifurcation of $D_{\infty h}$ - and D_{nh} -Equivariant Systems	299	9.2	Theory of Critical Initial Imperfection	234	12.4.2	Bifurcation of a D_{nd} -Equivariant System	305	9.2.1	Formulation	234	12.5	Problems	307	9.2.2	Exploiting Group Equivariance	237	12.6	Summary	307	9.2.3	Simple Critical Points	240	13	Echelon-Mode Formation	308	9.2.4	Double Critical Points	241	13.1	Introduction	308	9.3	Resonance of Symmetry	242	13.2	Underlying Symmetries	313	9.4	Critical Imperfection of Symmetric Truss Structures	243	13.3	Subgroups Representing Patterns of Interest	315	9.4.1	Truss Tents	243	13.4	Recursive Bifurcation Leading to Echelon Modes	320	9.4.2	Regular-Hexagonal Truss Dome	246	13.5	Experiment on a Soil Specimen	322	9.5	Problems	249	13.6	Rectangular Plate with Periodic Boundaries	325	9.6	Summary	249	13.6.1	Underlying Symmetry	325	10	Random Initial Imperfection (II)	250	13.6.2	Numerical Analysis	327	10.1	Introduction	250	13.7	Image Simulations	331	10.2	Probability Density Functions of Critical Loads	251	13.7.1	Image Simulation Procedure	331	10.2.1	Formulation	251	13.7.2	Kaolin	334	10.2.2	Derivation of Probability Density Functions	252	13.7.3	Steel	337												
11.3	Imperfect Behavior of Structures and Materials	268																																																																																																																																																																																																
8.6	Local Analysis near a Double Critical Point: Perfect System	203	11.3.1	Regular-Pentagonal Truss Dome	269	8.6.1	Bifurcated Branches	203	11.3.2	Sand Specimens	272	8.6.2	Stability	209	11.4	Problems	275	8.7	Local Analysis near a Double Critical Point: Imperfect System	212	11.5	Summary	275	8.7.1	Solution Curves	212	III	Modeling of Bifurcation Phenomena	277	8.7.2	Imperfection Sensitivity Laws	219	8.8	Experimentally Observed Bifurcation Diagrams	224	12	Bifurcation of Cylindrical Sand Specimens	281	8.8.1	Simple Bifurcation Point	224	12.1	Introduction	281	8.8.2	Double Bifurcation Point	225	12.2	Groups for Spatial Symmetry	285	8.9	Appendix: Alternative Stability Analysis for Bifurcated Branches	228	12.3	Experiments on Sand Specimens	289	8.10	Problems	231	12.3.1	Recursive Bifurcation Behavior	289	8.11	Summary	232	12.3.2	Mode Switching Behavior	297	9	Critical Initial Imperfection (II)	233	12.4	Appendix: Derivation of Bifurcation Rules	298	9.1	Introduction	233	12.4.1	Bifurcation of $D_{\infty h}$ - and D_{nh} -Equivariant Systems	299	9.2	Theory of Critical Initial Imperfection	234	12.4.2	Bifurcation of a D_{nd} -Equivariant System	305	9.2.1	Formulation	234	12.5	Problems	307	9.2.2	Exploiting Group Equivariance	237	12.6	Summary	307	9.2.3	Simple Critical Points	240	13	Echelon-Mode Formation	308	9.2.4	Double Critical Points	241	13.1	Introduction	308	9.3	Resonance of Symmetry	242	13.2	Underlying Symmetries	313	9.4	Critical Imperfection of Symmetric Truss Structures	243	13.3	Subgroups Representing Patterns of Interest	315	9.4.1	Truss Tents	243	13.4	Recursive Bifurcation Leading to Echelon Modes	320	9.4.2	Regular-Hexagonal Truss Dome	246	13.5	Experiment on a Soil Specimen	322	9.5	Problems	249	13.6	Rectangular Plate with Periodic Boundaries	325	9.6	Summary	249	13.6.1	Underlying Symmetry	325	10	Random Initial Imperfection (II)	250	13.6.2	Numerical Analysis	327	10.1	Introduction	250	13.7	Image Simulations	331	10.2	Probability Density Functions of Critical Loads	251	13.7.1	Image Simulation Procedure	331	10.2.1	Formulation	251	13.7.2	Kaolin	334	10.2.2	Derivation of Probability Density Functions	252	13.7.3	Steel	337																		
11.3.1	Regular-Pentagonal Truss Dome	269																																																																																																																																																																																																
8.6.1	Bifurcated Branches	203	11.3.2	Sand Specimens	272	8.6.2	Stability	209	11.4	Problems	275	8.7	Local Analysis near a Double Critical Point: Imperfect System	212	11.5	Summary	275	8.7.1	Solution Curves	212	III	Modeling of Bifurcation Phenomena	277	8.7.2	Imperfection Sensitivity Laws	219	8.8	Experimentally Observed Bifurcation Diagrams	224	12	Bifurcation of Cylindrical Sand Specimens	281	8.8.1	Simple Bifurcation Point	224	12.1	Introduction	281	8.8.2	Double Bifurcation Point	225	12.2	Groups for Spatial Symmetry	285	8.9	Appendix: Alternative Stability Analysis for Bifurcated Branches	228	12.3	Experiments on Sand Specimens	289	8.10	Problems	231	12.3.1	Recursive Bifurcation Behavior	289	8.11	Summary	232	12.3.2	Mode Switching Behavior	297	9	Critical Initial Imperfection (II)	233	12.4	Appendix: Derivation of Bifurcation Rules	298	9.1	Introduction	233	12.4.1	Bifurcation of $D_{\infty h}$ - and D_{nh} -Equivariant Systems	299	9.2	Theory of Critical Initial Imperfection	234	12.4.2	Bifurcation of a D_{nd} -Equivariant System	305	9.2.1	Formulation	234	12.5	Problems	307	9.2.2	Exploiting Group Equivariance	237	12.6	Summary	307	9.2.3	Simple Critical Points	240	13	Echelon-Mode Formation	308	9.2.4	Double Critical Points	241	13.1	Introduction	308	9.3	Resonance of Symmetry	242	13.2	Underlying Symmetries	313	9.4	Critical Imperfection of Symmetric Truss Structures	243	13.3	Subgroups Representing Patterns of Interest	315	9.4.1	Truss Tents	243	13.4	Recursive Bifurcation Leading to Echelon Modes	320	9.4.2	Regular-Hexagonal Truss Dome	246	13.5	Experiment on a Soil Specimen	322	9.5	Problems	249	13.6	Rectangular Plate with Periodic Boundaries	325	9.6	Summary	249	13.6.1	Underlying Symmetry	325	10	Random Initial Imperfection (II)	250	13.6.2	Numerical Analysis	327	10.1	Introduction	250	13.7	Image Simulations	331	10.2	Probability Density Functions of Critical Loads	251	13.7.1	Image Simulation Procedure	331	10.2.1	Formulation	251	13.7.2	Kaolin	334	10.2.2	Derivation of Probability Density Functions	252	13.7.3	Steel	337

13.8	Appendix: Derivation of Bifurcation Rules	340
13.8.1	Bifurcation of a $C_{\infty v} \times \tilde{C}_{\infty v}$ -Equivariant System	340
13.8.2	Bifurcation of an $OB_{n\tilde{n}}^{\pm}$ -Equivariant System	348
13.8.3	Bifurcation of a $D_{\infty\infty}$ -Equivariant System	353
13.8.4	Symmetry of Fourier Terms	355
13.9	Problems	356
13.10	Summary	357
14	Bifurcation of Steel Specimens	358
14.1	Introduction	358
14.2	Symmetry of a Rectangular Parallelepiped Domain	359
14.3	Recursive Bifurcation Rule	361
14.4	Experimental Study	362
14.4.1	Effect of Cross-Sectional Shape	364
14.4.2	Recursive Bifurcation	369
14.5	Computational Study	372
14.5.1	Analysis Conditions	372
14.5.2	Bifurcation Analyses	372
14.6	Appendix: Derivation of Bifurcation Rules	375
14.7	Problems	376
14.8	Summary	376
15	Miscellaneous Aspects of Bifurcation Phenomena	378
15.1	Introduction	378
15.2	Clustered Bifurcation Point	379
15.3	Size Effect	380
15.3.1	Viewpoint of Fracture Mechanics	380
15.3.2	Viewpoint of Imperfection Sensitivity	381
15.3.3	Viewpoint of Hilltop Bifurcation	383
15.3.4	Viewpoint of Mode Switching	385
15.4	Explosive Bifurcation	389
15.5	Problems	391
15.6	Summary	391
