Contents

Preface v

1. General Technical Results 1
1.1 Introduction 1
1.1.1 Function Spaces 1
1.1.2 Regularity of Domains 10
1.1.3 Poincaré Inequality 12
1.1.4 Covering of Domains 18
1.2 Useful Techniques 25
1.2.1 Reverse Hölder's Inequality 25
1.2.2 Gehring's Result 36
1.2.3 Hole-Filling Technique of Widman 38
1.2.4 Inhomogeneous Hole-Filling 40
1.3 Green Function 44
1.3.1 Statement of Results 44
1.3.2 Proof of Theorem 1.26 45
1.3.3 Estimates on $\log G$ 46
1.3.4 Estimates on Positive and Negative Powers of G 49
1.3.5 Harnack's Inequality 52
1.3.6 Proof of Theorem 1.27 57

2. General Regularity Results 63
2.1 Introduction 63
2.2 Obtaining $W^{1,p}$ Regularity 63
2.2.1 Linear Equations 63
2.2.2 Nonlinear Problems 66
2.3 Obtaining C^δ Regularity 70
2.3.1 L^∞ Bounds for Linear Problems 70
2.3.2 C^δ Regularity for Dirichlet Problems 73
2.3.3 C^δ Regularity for Linear Mixed Boundary Value Problems 82
2.3.4 C^δ Regularity in the Case $n = 2$ 85
2.4 Maximum Principle 87
2.4.1 Assumptions 87

2.4.2 Proof of Theorem 2.16 88
2.5 More Regularity 89
2.5.1 From C^δ and W^{1,p_0}, $p_0 > 2$, to H^2_{loc} 89
2.5.2 Using the Linear Theory of Regularity 96
2.5.3 Full Regularity for a General Quasilinear Scalar Equation 98

3. Nonlinear Elliptic Systems Arising from Stochastic Games 113
3.1 Stochastic Games Background 113
3.1.1 Statement of the Problem and Results 113
3.1.2 Bellman Equations 115
3.1.3 Verification Property 116
3.2 Introduction to the Analytic Part 118
3.3 Estimates in Sobolev spaces and in C^δ 120
3.3.1 Assumptions and Statement of Results 120
3.3.2 Preliminaries 122
3.3.3 Proof of Theorem 3.7 125
3.4 Estimates in L^∞ 127
3.4.1 Assumptions 127
3.4.2 Statement of Results 128
3.5 Existence of Solutions 129
3.5.1 Setting of the Problem and Assumptions 129
3.5.2 Proof of Existence 130
3.5.3 Existence of a Weak Solution 132
3.6 Hamiltonians Arising from Games 133
3.6.1 Notation 133
3.6.2 Verification of the Assumptions for Hölder Regularity 135
3.6.3 Verification of the Assumptions for the L^∞ Bound 136
3.7 The Case of Two Players with Different Coupling Terms in the Payoffs 143
3.7.1 Description of the Model and Statement of Results ... 144
3.7.2 L^∞ Bounds 145
3.7.3 H^1_0 Bound 150

4. Nonlinear Elliptic Systems Arising from Ergodic Control . 153
4.1 Introduction 153
4.2 Assumptions and Statement of Results 154
4.2.1 Assumptions on the Hamiltonians 154
4.2.2 Statement of Results 156
4.3 Proof of Theorem 4.4 156
4.3.1 First Estimates 156
4.3.2 Estimates on $u^\nu_\epsilon - \bar{u}^\nu_\epsilon$ 158
4.3.3 End of Proof of Theorem 4.4 161
4.4 Verification of the Assumptions 162
4.4.1 Notation 162

4.4.2 The Scalar Case 163
4.4.3 The General Case 167
4.5 A Variant of Theorem 4.4 169
4.5.1 Statement of Results 169
4.5.2 Proof of Theorem 4.13 170
4.6 Ergodic Problems in R^n 175
4.6.1 Presentation of the Problem 175
4.6.2 Existence Theorem for an Approximate Solution 176
4.6.3 Proof of Theorem 4.17 189
4.6.4 Growth at Infinity 191
4.6.5 Uniqueness 192

5. Harmonic Mappings 197
5.1 Introduction 197
5.2 Extremals 198
5.3 Regularity 200
5.4 Hardy Spaces 201
5.4.1 Basic Properties 201
5.4.2 Main Regularity Result in the Hardy Space 204
5.5 Proof of Theorem 5.13 208
5.5.1 Continuity when $n = 2$ 208
5.5.2 Proof of (5.35) and (5.36) 216
5.5.3 Proof of (5.37) 218
5.5.4 Atomic decomposition 221

6. Nonlinear Elliptic Systems Arising from the Theory of Semiconductors 229
6.1 Physical Background 229
6.2 Stationary Case Without Impact Ionization 230
6.2.1 Mathematical Setting 230
6.2.2 Proof of Theorem 6.1 233
6.2.3 A Uniqueness Result 240
6.2.4 Local Regularity 245
6.3 Stationary Case with Impact Ionization 246
6.3.1 Setting of the Model 246
6.3.2 Proof of Theorem 6.5 248
6.4 Impact Ionization Without Recombination 257
6.4.1 Statement of the Problem 257
6.4.2 Proof of Theorem 6.7 259

7. Stationary Navier–Stokes Equations 265
7.1 Introduction 265
7.2 Regularity of "Maximum-Like Solutions" 266
7.2.1 Setting of the Problem 266

7.2.2 Some Regularity Properties of "Maximum-Like Solutions" ... 267
7.2.3 The Navier–Stokes Inequality ... 273
7.2.4 Hole-Filling ... 275
7.2.5 Full Regularity ... 279
7.3 Maximum Solutions and the NS Inequality ... 280
7.3.1 Notation and Setup ... 280
7.3.2 Proof of Theorem 7.8 ... 281
7.4 Existence of a Regular Solution for $n \leq 5$ ... 283
7.4.1 Green Function Associated with Incompressible Flows 283
7.4.2 Approximation ... 288
7.4.3 Proof of Existence of a Maximum Solution for $n \leq 5$ .. 289
7.5 Periodic Case: Existence of a Regular Solution for $n < 10$ 291
7.5.1 Approximation ... 291
7.5.2 A Specific Green Function ... 292
7.5.3 Main Results ... 295

8. Strongly Coupled Elliptic Systems ... 299
8.1 Introduction ... 299
8.2 H^2_{loc} and Meyers's Regularity Results ... 300
8.3 Hölder Regularity ... 305
8.3.1 Preliminaries ... 305
8.3.2 Representation Using Spherical Functions ... 308
8.3.3 Statement of the Main Result ... 311
8.3.4 Additional Remarks ... 317
8.3.5 Hölder's Continuity up to the Boundary ... 319
8.4 $C^{1+\alpha}$ Regularity ... 329
8.4.1 Auxiliary Inequalities ... 329
8.4.2 Main Result ... 334
8.5 Almost Everywhere Regularity ... 338
8.5.1 Regularity on Neighborhoods of Lebesgue Points ... 338
8.5.2 Proof of Theorem 8.22 ... 339
8.6 Regularity in the Uhlenbeck Case ... 343
8.6.1 Setting of the Problem ... 343
8.6.2 Proof of Theorem 8.24 ... 344
8.7 Counterexamples ... 348
8.8 Regularity for Mixed Boundary Value Systems ... 352
8.8.1 Stating the Problem ... 352
8.8.2 Proof of Theorem 8.25 ... 354
8.8.3 Proof of Lemma 8.28 ... 359
8.8.4 Further Regularity ... 364
8.8.5 Domain with a Corner. Mixed Boundary Conditions .. 369
8.8.6 Domain with a Corner. Dirichlet Boundary Conditions 371

9. Dual Approach to Nonlinear Elliptic Systems ... 375
9.1 Introduction ... 375
9.2 Preliminaries ... 377
9.2.1 Notation ... 377
9.2.2 Properties of the Operators $\epsilon(u)$ and Du ... 378
9.3 Elasticity Models ... 379
9.3.1 Primal and Dual Problems ... 379
9.3.2 A Hybrid Model ... 380
9.4 H^1_{loc} Theory for the Nonsymmetric Case ... 381
9.4.1 Presentation of the Problem ... 381
9.4.2 H^1_{loc} Regularity ... 382
9.5 H^1_{loc} Theory for the Symmetric Case ... 391
9.5.1 Presentation of the Problem ... 391
9.5.2 H^1_{loc} Regularity ... 391
9.5.3 Reducing the Symmetric Case to the Nonsymmetric Case ... 396
9.6 L^∞_{loc} Theory for the Nonsymmetric Uhlenbeck Case ... 398
9.6.1 Setting of the Problem and Statement of Results ... 398
9.6.2 Proof of Theorem 9.8 ... 399
9.7 $W^{1,p}_{\text{loc}}$ Theory for the Nonsymmetric Case ... 401
9.7.1 Assumptions and Results ... 401
9.7.2 Proof of Theorem 9.9 ... 402
9.8 $C^{1+\delta}_{\text{loc}}$ Regularity for the Nonsymmetric Case ... 405
9.8.1 Setting of the Problem and Statement of Results ... 405
9.8.2 Preliminary Results ... 406
9.8.3 Proof of Theorem 9.10 ... 410
9.9 C^δ Regularity on Neighborhoods of Lebesgue Points for the Nonsymmetric Case ... 413
9.9.1 Setting of the Problem and Statement of Results ... 413
9.9.2 Proof of Theorem 9.11 ... 414
9.9.3 Additional Results in the Uhlenbeck Case ... 418

10. Nonlinear Elliptic Systems Arising from plasticity Theory ... 421
10.1 Introduction ... 421
10.2 Description of Models ... 422
10.2.1 Spaces $U(\Omega), \Sigma(\Omega)$ ... 422
10.2.2 Hencky model ... 423
10.2.3 Norton–Hoff Model ... 424
10.2.4 Passing to the Limit ... 426
10.3 Estimates on the Displacement ... 427
10.3.1 The f_j Derive from a Potential ... 427
10.3.2 Strict Interior Condition ... 428
10.3.3 Constituent Law for the Hencky model ... 429
10.4 H^1_{loc} Regularity ... 430

10.4.1 Preliminaries 430
10.4.2 Uniform Estimates and Main Regularity Result 432
