<b>Preface</b>	<b>v</b>
<b>Introduction</b>	<b>1</b>
What Are Dynamical Systems? . . . . .	1
What Is Random Noise? . . . . .	3
What Are Ergodic Theorems? . . . . .	8
What Happens for $t$ Large? . . . . .	18
What Is in This Book? . . . . .	21
<b>1 Ergodic Theorems</b>	<b>49</b>
1.1 Birkhoff's Classical Ergodic Theorem . . . . .	49
1.1.1 Mixing Conditions . . . . .	53
1.1.2 Discrete-Time Stationary Processes . . . . .	54
1.2 Discrete-Time Markov Processes . . . . .	56
1.3 Continuous-Time Stationary Processes . . . . .	60
1.4 Continuous-Time Markov Processes . . . . .	61
<b>2 Convergence Properties of Stochastic Processes</b>	<b>64</b>
2.1 Weak Convergence of Stochastic Processes . . . . .	64
2.1.1 Weak Compactness in $C$ . . . . .	66
2.2 Convergence to a Diffusion Process . . . . .	68
2.2.1 Diffusion Processes . . . . .	68
2.2.2 Weak Convergence to a Diffusion Process . . . . .	70
2.3 Central Limit Theorems for Stochastic Processes . . . . .	73

2.3.1	Continuous-Time Markov Processes . . . . .	73	6.2.2	Transitions Between Stable Static States . . . . .	198
2.3.2	Discrete-Time Markov Processes . . . . .	75	6.2.3	Stochastic Resonance . . . . .	199
2.3.3	Discrete-Time Stationary Processes . . . . .	76	6.3	Randomly Perturbed Difference Equations . . . . .	200
2.3.4	Continuous-Time Stationary Processes . . . . .	79	6.3.1	Markov Perturbations: Linear Equations . . . . .	201
2.4	Large Deviation Theorems . . . . .	80	6.3.2	Stationary Perturbations . . . . .	203
2.4.1	Continuous-Time Markov Processes . . . . .	81	6.3.3	Markov Perturbations: Nonlinear Equations . . . . .	205
2.4.2	Discrete-Time Markov Processes . . . . .	86	6.3.4	Stationary Perturbations . . . . .	210
<b>3</b>	<b>Averaging</b>	<b>88</b>	6.3.5	Small Perturbations of a Stable System . . . . .	211
3.1	Volterra Integral Equations . . . . .	88	6.4	Convolution Integral Equations . . . . .	216
3.1.1	Linear Volterra Integral Equations . . . . .	92	6.4.1	Laplace Transforms and Their Inverses . . . . .	218
3.1.2	Some Nonlinear Equations . . . . .	97	6.4.2	Laplace Transforms of Noisy Kernels . . . . .	222
3.2	Differential Equations . . . . .	99	<b>7</b>	<b>Markov Chains with Random Transition Probabilities</b>	<b>232</b>
3.2.1	Linear Differential Equations . . . . .	101	7.1	Stationary Random Environment . . . . .	233
3.3	Difference Equations . . . . .	102	7.2	Weakly Random Environments . . . . .	243
3.3.1	Linear Difference Equations . . . . .	105	7.3	Markov Processes with Randomly Perturbed Transition Probabilities . . . . .	249
3.4	Large Deviation for Differential Equations . . . . .	105	7.3.1	Stationary Random Environments . . . . .	249
3.4.1	Some Auxiliary Results . . . . .	106	7.3.2	Ergodic Theorem for Markov Processes in Random Environments . . . . .	253
3.4.2	Main Theorem . . . . .	110	7.3.3	Markov Process in a Weakly Random Environment . . . . .	254
3.4.3	Systems with Additive Perturbations . . . . .	112	<b>8</b>	<b>Randomly Perturbed Mechanical Systems</b>	<b>257</b>
<b>4</b>	<b>Normal Deviations</b>	<b>114</b>	8.1	Conservative Systems with Two Degrees of Freedom . . . . .	257
4.1	Volterra Integral Equations . . . . .	114	8.1.1	Conservative Systems . . . . .	258
4.2	Differential Equations . . . . .	120	8.1.2	Randomly Perturbed Conservative Systems . . . . .	262
4.2.1	Markov Perturbations . . . . .	127	8.1.3	Behavior of the Perturbed System near a Knot . . . . .	273
4.3	Difference Equations . . . . .	128	8.1.4	Diffusion Processes on Graphs . . . . .	285
<b>5</b>	<b>Diffusion Approximation</b>	<b>133</b>	8.1.5	Simulation of a Two-Well Potential Problem . . . . .	290
5.1	Differential Equations . . . . .	133	8.2	Linear Oscillating Conservative Systems . . . . .	290
5.1.1	Markov Jump Perturbations . . . . .	134	8.2.1	Free Linear Oscillating Conservative Systems . . . . .	290
5.1.2	Some Generalizations . . . . .	140	8.2.2	Randomly Perturbed Linear Oscillating Systems . . . . .	293
5.1.3	General Markov Perturbations . . . . .	145	8.3	A Rigid Body with a Fixed Point . . . . .	297
5.1.4	Stationary Perturbations . . . . .	146	8.3.1	Motion of a Rigid Body around a Fixed Point . . . . .	298
5.1.5	Diffusion Approximations to First Integrals . . . . .	150	8.3.2	Analysis of Randomly Perturbed Motions . . . . .	299
5.2	Difference Equations . . . . .	156	<b>9</b>	<b>Dynamical Systems on a Torus</b>	<b>303</b>
5.2.1	Markov Perturbations . . . . .	156	9.1	Theory of Rotation Numbers . . . . .	303
5.2.2	Diffusion Approximations to First Integrals . . . . .	161	9.1.1	Existence of the Rotation Number . . . . .	305
5.2.3	Stationary Perturbations . . . . .	166	9.1.2	Purely Periodic Systems . . . . .	307
<b>6</b>	<b>Stability</b>	<b>172</b>	9.1.3	Ergodic Systems . . . . .	308
6.1	Stability of Perturbed Differential Equations . . . . .	172			
6.1.1	Jump Perturbations of Nonlinear Equations . . . . .	173			
6.1.2	Stationary Perturbations . . . . .	182			
6.2	Stochastic Resonance for Gradient Systems . . . . .	193			
6.2.1	Large Deviations near a Stable Static State . . . . .	193			

9.1.4	Simulation of Rotation Numbers . . . . .	310		
9.2	Randomly Perturbed Torus Flows . . . . .	311		
9.2.1	Rotation Number in the Presence of Noise . . . . .	313		
9.2.2	Simulation of Rotation Numbers with Noise . . . . .	321		
9.2.3	Randomly Perturbed Purely Periodic Systems . . . . .	321		
9.2.4	Ergodic Systems . . . . .	329		
9.2.5	Periodic Systems . . . . .	335		
<b>10</b>	<b>Phase-Locked Loops</b>	<b>343</b>		
10.1	The Free System . . . . .	346		
10.1.1	The Nonrandom Free System . . . . .	347		
10.1.2	Example: Simulation of the Free PLL System . . . . .	352		
10.1.3	Random Perturbations of the Free System . . . . .	353		
10.1.4	Behavior of the Perturbed System near the Running Periodic Solution . . . . .	355		
10.1.5	Behavior of the Perturbed System near the Stable Static State . . . . .	357		
10.1.6	Ergodic Properties of the Perturbed System . . . . .	360		
10.2	The Forced Problem . . . . .	362		
10.2.1	Systems Without a Loop Filter (Nonrandom) . . . . .	363		
10.2.2	Randomly Perturbed Systems Without a Loop Filter . . . . .	367		
10.2.3	Forced Systems with Noisy Input Signals . . . . .	371		
10.2.4	Simulation of a Phase-Locked Loop with Noisy Input . . . . .	374		
<b>11</b>	<b>Models in Population Biology</b>	<b>376</b>		
11.1	Mathematical Ecology . . . . .	376		
11.1.1	Lotka–Volterra Model . . . . .	377		
11.1.2	Random Perturbations of the Lotka–Volterra Model . . . . .	379		
11.1.3	Simulation of the Lotka–Volterra Model . . . . .	387		
11.1.4	Two Species Competing for a Limited Resource . . . . .	388		
11.1.5	A Food Chain with Three Species . . . . .	394		
11.1.6	Simulation of a Food Chain . . . . .	398		
11.2	Epidemics . . . . .	398		
11.2.1	The Kermack–McKendrick Model . . . . .	399		
11.2.2	Randomly Perturbed Epidemic Models . . . . .	403		
11.2.3	Recurrent Epidemics . . . . .	407		
11.2.4	Diffusion Approximation . . . . .	411		
11.3	Demographics . . . . .	413		
11.3.1	Nonlinear Renewal Equations . . . . .	413		
11.3.2	Linear Renewal Equations . . . . .	419		
11.3.3	Discrete-Time Renewal Theory . . . . .	421		
<b>12</b>	<b>Genetics</b>	<b>424</b>		
12.1	Population Genetics: The Gene Pool . . . . .	425		
12.1.1	The FHW Model with Stationary Slow Selection . . . . .	426		
12.1.2	Random Perturbation of the Stationary Slow Selection Model . . . . .	427		
12.2	Bacterial Genetics: Plasmid Stability . . . . .	431		
12.2.1	Plasmid Dynamics . . . . .	433		
12.2.2	Randomly Perturbed Plasmid Dynamics . . . . .	435		
12.3	Evolutionary Genetics: The Genome . . . . .	439		
12.3.1	Branching Markov Process Model . . . . .	440		
12.3.2	Evolution of the Genome in a Random Environment . . . . .	447		
12.3.3	Evolution in a Random Environment . . . . .	450		
<b>A</b>	<b>Some Notions of Probability Theory</b>	<b>452</b>		
<b>B</b>	<b>Commentary</b>	<b>469</b>		
<b>References</b>		<b>472</b>
