

Acknowledgments	xi
1 Introduction	1
1.1 Definition of the concept	1
1.2 Historical background	3
1.3 Description of the contents	5
2 Photon ray theory	8
2.1 Geometric optics	8
2.2 Space and time refraction	11
2.2.1 Refraction	12
2.2.2 Time refraction	13
2.2.3 Space-time refraction	15
2.3 Generalized Snell's law	17
2.4 Photon effective mass	22
2.5 Covariant formulation	27
3 Photon dynamics	31
3.1 Ionization fronts	31
3.2 Accelerated fronts	39
3.3 Photon trapping	43
3.3.1 Generation of laser wakefields	43
3.3.2 Nonlinear photon resonance	44
3.3.3 Covariant formulation	49
3.4 Stochastic photon acceleration	51
3.4.1 Motion in two wakefields	52
3.4.2 Photon discrete mapping	54
3.5 Photon Fermi acceleration	57
3.6 Magnetoplasmas and other optical media	63
4 Photon kinetic theory	67
4.1 Klimontovich equation for photons	68
4.2 Wigner-Moyal equation for electromagnetic radiation	70
4.2.1 Non-dispersive medium	70
4.2.2 Dispersive medium	74
4.3 Photon distributions	75
4.3.1 Uniform and non-dispersive medium	76
4.3.2 Uniform and dispersive medium	77
4.3.3 Pulse chirp	78
4.3.4 Non-stationary medium	81
4.3.5 Self-blueshift	82
4.4 Photon fluid equations	83
4.5 Self-phase modulation	87
4.5.1 Optical theory	88
4.5.2 Kinetic theory	90
5 Photon equivalent charge	97
5.1 Derivation of the equivalent charge	97
