### The Physics of Protein Crystallization

PETER G. VEKILOV AND ALEXANDER A. CHERNOV

I. Introduction .....	2
II. Proteins and Protein Crystallization: Phenomenology .....	9
III. The Protein Crystal .....	14
IV. Intermolecular Interactions and the Phase Diagram of the Protein Solution .....	23
V. Thermodynamics and Crystallization Driving Force .....	34
VI. Crystal Nucleation .....	50
VII. Growth of Crystals: the Mesoscopic Lengthscales .....	77
VIII. Molecular Processes at Steps .....	96
IX. Impurities .....	111
X. Non-uniform Step Density and Step Pattern Formation .....	115
XI. Crystal Perfection .....	123
XII. Concluding Remarks .....	146

### Excitons in Semiconductor Nanostructures

ERICH RUNGE

I. Introduction .....	150
II. Excitons in Semiconductor Nanostructures .....	154
III. Center-of-Mass Exciton Wavefunctions in Ideal Quantum Wells and Wires .....	180
IV. Wavefunctions of Disorder-Localized Excitons .....	189
V. Absorption .....	193
VI. Luminescence .....	218
VII. Relaxation Kinetics .....	232
VIII. Nonthermal Distribution Functions .....	254
IX. Biexcitons, Trions, Exciton Condensation, and Excitonic Lasing .....	263
X. Spectral Features of Eigenenergies and Matrix Analysis .....	275
XI. Coherence, Secondary Emission and Speckle Analysis .....	291
XII. Conclusions and Prospects .....	303
AUTHOR INDEX .....	307
SUBJECT INDEX .....	331
