CONTRIBUTORS	xi
VOLUMES IN SERIES	xiii
PREFACE	xvii
1. Stabilizing Diode Lasers to High-Finesse Cavities by RICHARD W. FOX, CHRIS W. OATES, and LEO W. HOLLBERG	
1.1. Introduction	1
1.2. Introduction to Diode Laser Locking	2
1.3. Generating the Error Signal: The Pound–Drever–Hall Method	5
1.4. The Loop Filter	19
1.5. Locking the Laser and Loop Optimization	29
1.6. Repetitive Locking for Cavity Ring-Down Spectroscopy	37
1.7. Conclusions	44
References	44
2. Spectroscopic Applications Using Ring-Down Cavities by GIEL BERDEN, GERARD MEIJER, and WIM UBACHS	
2.1. Introduction	47
2.2. O ₂ : A Benchmark System for Ring-Down Techniques	47
2.3. Spectroscopic Applications of CRD	63
2.4. CRD and Alternative Techniques	73
Acknowledgment	74
References	74
3. Absorption Detection at the Quantum Limit: Probing High-Finesse Cavities with Modulation Techniques by JUN YE and JOHN L. HALL	
3.1. Introduction	83
3.2. Cavity Enhancement: A Simple Physics Picture	86

3.3. Signal Encoding and Extracting: Modulation-plus-Heterodyne Detection	90
3.4. Weak Absorption Measured by Field Decay (Time-Domain)	95
3.5. Weak Absorption Measured by Field Phase (Frequency-Domain)	105
3.6. Concluding Remarks on Signal Extraction and Cavity Enhancement	121
References	122
4. Cavity-Enhanced Absorption: Intracavity Laser Spectroscopy by GEORGE H. ATKINSON	
4.1. Introduction	129
4.2. Principles of ILS	132
4.3. Development of ILS	134
4.4. Concluding Remarks	145
References	146
5. The Continuous-Wave Hydrogen Raman Laser by PETER A. ROOS, LEI S. MENG, and JOHN L. CARLSTEN	
5.1. Introduction	157
5.2. Semiclassical Theory	162
5.3. Nd:YAG-Pumped System	166
5.4. Diode-Pumped Systems	170
5.5. Practical Considerations	177
5.6. Summary	181
References	181
6. 2D Microcavities: Theory and Experiments by JENS U. NÖCKEL and RICHARD K. CHANG	
6.1. Introduction	185

6.2. Dielectric Microcavities	186
6.3. Whispering-Gallery Modes	189
6.4. Scattering Resonances and Quasibond States	192
6.5. Cavity Ring-Down and Light Emission	195
6.6. Wigner Delay Time and the Density of States	197
6.7. Lifetime Versus Linewidth in Experiments	200
6.8. How Many Modes Does a Cavity Support?	201
6.9. Cavities Without Chaos	204
6.10. Chaotic Cavities	207
6.11. Phase Space Representation with Poincaré Sections	208
6.12. Uncertainty Principle	210
6.13. Husimi Projection	211
6.14. Constructive Interference with Chaotic Rays	213
6.15. Chaotic Whispering-Gallery Modes	216
6.16. Dynamical Eclipsing	218
6.17. Conclusions	219
References	220
7. Microparticle Photophysics: Fluorescence Microscopy and Spectroscopy of a Photonic Atom by STEPHEN ARNOLD and STEPHEN HOLLER	
7.1. Introduction	227
7.2. Photonic Atom Model	229
7.3. Spontaneous Emission in a Microsphere: Cavity QED	232
7.4. Spontaneous Emission from Molecules at a Microsphere Surface: A Semiclassical Approach	236
7.5. Applications	244
Acknowledgment	250
References	251

8. Single Atoms Moving in a High-Finesse Cavity by P. W. H. PINKSE and G. REMPE	
8.1. Introduction	255
8.2. Basic Theory	259
8.3. Cavity-Mediated Light Forces	270
8.4. Experimental Considerations	282
8.5. Outlook	288
Acknowledgments	289
References	289
9. The Cavity-Enhanced Optical-Frequency Comb Generator and its Applications by MOTONOBU KOUROGI, BAMBANG WIDIYATMOKO, and MOTOICHI OHTSU	
9.1. Introduction	297
9.2. Generating an Optical-Frequency Comb	298
9.3. Using Optical-Frequency Combs	305
9.4. Summary	314
References	315
INDEX	321
