Preface	v
-------------------	---

Chapter 1. Chaotic dynamics in semiconductor lasers with optical feedback, J. Ohtsubo (Hamamatsu, Japan)	1
§ 1. Introduction	3
§ 2. Semiconductor lasers as class-B lasers	6
2.1. Laser model and Bloch equations	6
2.2. Lorenz-Haken equations	9
2.3. Classification of lasers	12
2.4. Semiconductor lasers and rate equations	13
2.5. Various semiconductor lasers and rate equations	20
§ 3. Theory of semiconductor lasers with optical feedback	25
3.1. Rate equations for semiconductor lasers with optical feedback	25
3.2. Feedback regimes	27
3.3. Gain reduction and linewidth broadening due to optical feedback	28
3.4. Linear stability analysis and linear modes	31
3.5. Low-frequency fluctuations in semiconductor lasers with optical feedback	34
3.6. Grating feedback effects	35
3.7. Incoherent feedback effects	37
3.8. Phase-conjugate feedback	38
§ 4. Chaotic dynamics in semiconductor lasers with optical feedback	40
4.1. Route to chaos and chaotic bifurcations	40
4.2. Linear modes	45
4.3. Dynamic properties for variations of external cavity length	46
4.4. Dynamic properties for injection current changes	49
4.5. Low-frequency fluctuations	50
4.6. Dynamics in phase-conjugate feedback	53
4.7. Dynamics in multi-mode oscillations	55
4.8. Dynamics of semiconductor lasers in various structures	57
§ 5. Some applications of semiconductor lasers with optical feedback	59
5.1. Control of chaos in semiconductor lasers with optical feedback	59
5.2. Noise suppression based on chaos control	63
5.3. Chaos synchronization in semiconductor lasers with optical feedback	65
5.4. Application for chaotic secure communications	72
§ 6. Concluding remarks	79

Acknowledgments	81

Chapter 2. Femtosecond pulses in optical fibers, F.G. Omenetto

(<i>Los Alamos, NM, USA</i>)	85
Introduction	87
§ 1. Femtosecond pulses – a brief overview	88
1.1. Pulse description	88
1.2. Pulse propagation	90
§ 2. Observation	92
2.1. Pulse measurement	92
2.2. Experimental results	95
§ 3. Manipulation	106
3.1. Ultrafast pulse shaping	106
3.2. Ultrafast pulse shaping in optical fibers	110
§ 4. Control	113
4.1. Coherent control – adaptive pulse shaping	113
4.2. Adaptive pulse shaping – Numerical evaluation	115
4.3. Femtosecond pulse shaping – experiment	119
§ 5. Photonic crystal fibers	124
5.1. Introduction	124
5.2. Experimental results: femtosecond pulses and PCFs	125
5.3. Frequency conversion	130
5.4. Polarization control of nonlinear conversion in PCF	132
§ 6. Final remarks	136
Acknowledgements	137
References	138

Chapter 3. Instantaneous optics of ultrashort broadband pulses and rapidly varying media, Alexander B. Shwartsburg (*Moscow, Russia*) and Guillaume Petite (*Palaiseau, France*)

143	
Introduction	145
§ 1. Ultrashort EM pulses: how they are modeled, produced, measured	145
1.1. Non-sinusoidal waveforms of electromagnetic waves	146
1.1.1. Square-shaped truncated train of monochromatic waves	146
1.1.2. Influence of increasing rise and fall time	147
1.1.3. Statistical fluctuations	149
1.1.4. Models of pulses with unequal rise and fall times	150
1.1.5. Poisson-spectrum pulses	152
1.1.6. Packet-like solutions	153
1.1.7. New types of waveforms	155
1.2. Production of ultrashort EM pulses	157
1.3. Measurement of ultrashort EM pulses	161

§ 2. Spatiotemporal reshaping of ultrashort pulses in stationary media	163
2.1. Dynamics of ultrashort waveforms in dispersionless optical systems	164
2.1.1. Coupling between spatial and temporal reshaping in free space	164
2.1.2. Spatiotemporal transformation of an ultrashort Poisson pulse passing through a thin lens	168
2.1.3. Curvilinear reflectors for controlling transient fields	170
2.2. Evolution of transients in dispersive media	173
2.2.1. Spatiotemporal evolution of localized waveform in lossless medium with arbitrary dispersion	174
2.2.2. Realistic models of ultrashort EM transients	176
2.2.3. Quasi-optical methods of spatiotemporal pulse shaping	179
2.3. Broadband reflectivity in transient optics	182
2.3.1. Resonant ringing of continuous dispersive media	183
2.3.2. Impulse reflection from a medium with non-local inhomogeneity-induced dispersion	185
2.3.3. Geometric dispersion	187
2.4. Diffraction-induced transformations of ultrashort pulses in a free space	188
2.4.1. On-axis time-derivative behavior of pulses	189
2.4.2. Frequency effects	191
2.4.3. Diffraction-induced spectral variations in the far field	193
2.4.4. Interplay of diffraction and dispersion-induced reshaping	195
§ 3. Optics of instantaneous media	196
3.1. Non-stationary-induced dispersion in dielectrics	198
3.1.1. Analytical solution	198
3.1.2. Alternative analytical solution	201
3.1.3. Amplitude–phase structure of field components	204
3.2. Dynamical regime in reflectivity of non-stationary dielectrics	206
3.3. Spectral distortions of waves reflected from an instantaneous dielectric	210
§ 4. Conclusion	211
Acknowledgements	212
References	212

Chapter 4. Optical coherence tomography, A.F. Fercher and

C.K. Hitzenberger (<i>Vienna, Austria</i>)	215
§ 1. Introduction	217
§ 2. Principles of OCT	219
2.1. Basic OCT configurations	219
2.2. OCT macroscopy, microscopy and endoscopy	222
2.3. Sample signal extraction	224
§ 3. OCT signal generation	225
3.1. Time-domain LCI	225
3.1.1. LCI signal	225
3.1.2. Autocorrelation interferometry	228
3.1.3. Cross-correlation interferometry	231
3.1.4. Heterodyne interferometry	233

3.2.	Fourier-domain LCI	234
3.2.1.	First-order Born approximation scattering	234
3.2.2.	Fourier-domain LCI	236
3.3.	Single and multiple scattered light	238
3.3.1.	Single scattering	238
3.3.2.	Transition from single to multiple scattering	241
3.3.3.	Cohherence of multiple scattered light	243
3.3.4.	Spatial distribution of the probing beam intensity	243
3.3.5.	OCT probing depth	245
3.3.6.	Measurement of physical sample properties	248
§ 4.	OCT contrast generation	248
4.1.	Doppler Optical Coherence Tomography	249
4.1.1.	Fourier transformation of fringe data	249
4.1.2.	Sequential scan processing	252
4.1.3.	Fourier-domain DOCT	253
4.1.4.	Hardware solutions	254
4.2.	Wavelength-dependent OCT	255
4.2.1.	Broadband spectroscopic OCT	256
4.2.2.	Differential absorption OCT	258
4.2.3.	Refractometric OCT	260
4.3.	Polarization sensitive OCT	261
4.4.	Phase-contrast OCT	267
§ 5.	OCT resolution and sensitivity	269
5.1.	Resolution and point spread function	269
5.2.	OCT signal processing	271
5.2.1.	Image display	271
5.2.2.	Image enhancement by deconvolution	271
5.2.3.	Image enhancement by dispersion compensation	273
5.3.	Speckle in OCT	275
5.3.1.	Speckle properties	275
5.3.2.	Speckle in LCI and OCT	276
5.3.3.	Suppression of speckle in OCT	277
5.4.	System sensitivity	278
§ 6.	Light sources and delay lines	281
6.1.	Wavelength, spectral width, and shape of the power spectrum	282
6.1.1.	Wavelength	282
6.1.2.	Spectral width	283
6.1.3.	Shape of the power spectrum	285
6.2.	Low-time-coherence light sources	286
6.2.1.	Single sources	286
6.2.2.	Synthesized sources and coherence function shaping	288
6.2.3.	Tunable lasers	290
6.3.	Optical delay lines	290
6.3.1.	Propagation of the coherence function	291
6.3.2.	Optical delay by path length modulation	291
6.3.3.	Optical delay by phase modulation	293

6.3.4.	Focus tracking	295
§ 7.	Conclusion	296
Acknowledgements	296	
References	296	
Chapter 5. Modulational instability of electromagnetic waves in inhomogeneous and in discrete media, Fatkhulla K. Abdullaev (Tashkent, Uzbekistan), Sergey A. Darmanyan (Troitsk, Russia) and Josselin Garnier (Toulouse, France)		303
§ 1.	Introduction	305
§ 2.	MI in homogeneous media	308
2.1.	Media with cubic nonlinearity	309
2.2.	Media with quadratic nonlinearity	312
§ 3.	MI in periodically inhomogeneous media	314
3.1.	MI in optical fibers with periodic nonlinearity	314
3.2.	MI in fibers with periodic dispersion	318
3.3.	MI in a fiber Bragg grating	320
3.4.	MI in nonlinear media with periodic potential	323
3.5.	MI in birefringent fibers with periodic dispersion	324
3.6.	MI in fibers with periodic birefringence	327
3.7.	MI in periodic quadratic nonlinear media	329
§ 4.	MI in random media	332
4.1.	Origins of random fluctuations	332
4.2.	The random scalar case	333
4.2.1.	Linear stability analysis	333
4.2.2.	The moment equations	336
4.2.3.	The second-moment MI gain	336
4.2.4.	Higher-order moments	338
4.2.5.	The sample and mean growth exponents	339
4.2.6.	Conclusions	344
4.3.	MI in fibers with random birefringence	344
4.3.1.	VMI induced by random nonlinearity and GVD	345
4.3.2.	VMI induced by random birefringence and PMD	345
4.4.	The case of a random-in-time potential	347
§ 5.	MI in nonlinear discrete optical systems	348
5.1.	MI in discrete cubic media	349
5.1.1.	Scalar DNLSE	352
5.1.2.	Vector DNLSE at $q=0,\pi$	352
5.2.	MI in discrete quadratic media	356
5.3.	Temporal effects in arrays with cubic nonlinearity	358
§ 6.	Conclusions	361
Acknowledgements	362	
References	362
