<b>Foreword by Henri Maître</b>	vii
<b>Acknowledgments</b>	ix
<b>List of Figures</b>	xiii
<b>Notation and Symbols</b>	xix
<b>1 Introduction</b>	1
1.1 About Modeling . . . . .	3
1.1.1 Bayesian Approach . . . . .	3
1.1.2 Inverse Problem . . . . .	8
1.1.3 Energy-Based Formulation . . . . .	10
1.1.4 Models . . . . .	11
1.2 Structure of the Book . . . . .	14
<b>I Spline Models</b>	21
<b>2 Nonparametric Spline Models</b>	23
2.1 Definition . . . . .	23
2.2 Optimization . . . . .	26
2.2.1 Bending Spline . . . . .	26
2.2.2 Spline Under Tension . . . . .	28

2.2.3 Robustness . . . . .	31	6 Bayesian Estimation	<b>113</b>
2.3 Bayesian Interpretation . . . . .	34	6.1 Principle . . . . .	113
2.4 Choice of Regularization Parameter . . . . .	36	6.2 Cost Functions . . . . .	118
2.5 Approximation Using a Surface . . . . .	39	6.2.1 Cost Function Examples . . . . .	119
2.5.1 L-Spline Surface . . . . .	40	6.2.2 Calculation Problems . . . . .	121
2.5.2 Quadratic Energy . . . . .	43	7 Simulation and Optimization	<b>123</b>
2.5.3 Finite Element Optimization . . . . .	46	7.1 Simulation . . . . .	124
<b>3 Parametric Spline Models</b>	<b>51</b>	7.1.1 Homogeneous Markov Chain . . . . .	124
3.1 Representation on a Basis of B-Splines . . . . .	51	7.1.2 Metropolis Dynamic . . . . .	125
3.1.1 Approximation Spline . . . . .	53	7.1.3 Simulated Gibbs Distribution . . . . .	127
3.1.2 Construction of B-Splines . . . . .	54	7.2 Stochastic Optimization . . . . .	130
3.2 Extensions . . . . .	57	7.3 Probabilistic Aspects . . . . .	134
3.2.1 Multidimensional Case . . . . .	57	7.4 Deterministic Optimization . . . . .	138
3.2.2 Heteroscedasticity . . . . .	62	7.4.1 ICM Algorithm . . . . .	138
3.3 High-Dimensional Splines . . . . .	67	7.4.2 Relaxation Algorithms . . . . .	141
3.3.1 Revealing Directions . . . . .	68	<b>8 Parameter Estimation</b>	<b>147</b>
3.3.2 Projection Pursuit Regression . . . . .	70	8.1 Complete Data . . . . .	148
<b>4 Auto-Associative Models</b>	<b>75</b>	8.1.1 Maximum Likelihood . . . . .	149
4.1 Analysis of Multidimensional Data . . . . .	75	8.1.2 Maximum Pseudolikelihood . . . . .	150
4.1.1 A Classical Approach . . . . .	76	8.1.3 Logistic Estimation . . . . .	153
4.1.2 Toward an Alternative Approach . . . . .	80	8.2 Incomplete Data . . . . .	156
4.2 Auto-Associative Composite Models . . . . .	82	8.2.1 Maximum Likelihood . . . . .	157
4.2.1 Model and Algorithm . . . . .	82	8.2.2 Gibbsian EM Algorithm . . . . .	161
4.2.2 Properties . . . . .	84	8.2.3 Bayesian Calibration . . . . .	170
4.3 Projection Pursuit and Spline Smoothing . . . . .	86	<b>III Modeling in Action</b>	<b>175</b>
4.3.1 Projection Index . . . . .	87	<b>9 Model-Building</b>	<b>177</b>
4.3.2 Spline Smoothing . . . . .	90	9.1 Multiple Spline Approximation . . . . .	177
4.4 Illustration . . . . .	93	9.1.1 Choice of Data and Image Characteristics . . . . .	179
<b>II Markov Models</b>	<b>97</b>	9.1.2 Definition of the Hidden Field . . . . .	181
<b>5 Fundamental Aspects</b>	<b>99</b>	9.1.3 Building an Energy . . . . .	183
5.1 Definitions . . . . .	99	9.2 Markov Modeling Methodology . . . . .	185
5.1.1 Finite Markov Fields . . . . .	100	9.2.1 Details for Implementation . . . . .	185
5.1.2 Gibbs Fields . . . . .	101	<b>10 Degradation in Imaging</b>	<b>189</b>
5.2 Markov–Gibbs Equivalence . . . . .	103	10.1 Denoising . . . . .	190
5.3 Examples . . . . .	106	10.1.1 Models with Explicit Discontinuities . . . . .	190
5.3.1 Bending Energy . . . . .	106	10.1.2 Models with Implicit Discontinuities . . . . .	198
5.3.2 Bernoulli Energy . . . . .	107	10.2 Deblurring . . . . .	201
5.3.3 Gaussian Energy . . . . .	108	10.2.1 A Particularly Ill-Posed Problem . . . . .	202
5.4 Consistency Problem . . . . .	109	10.2.2 Model with Implicit Discontinuities . . . . .	204

10.3	Scatter . . . . .	205
10.3.1	Direct Problem . . . . .	206
10.3.2	Inverse Problem . . . . .	211
10.4	Sensitivity Functions and Image Fusion . . . . .	216
10.4.1	A Restoration Problem . . . . .	217
10.4.2	Transfer Function Estimation . . . . .	221
10.4.3	Estimation of Stained Transfer Function . . . . .	224
<b>11</b>	<b>Detection of Filamentary Entities</b>	<b>227</b>
11.1	Valley Detection Principle . . . . .	228
11.1.1	Definitions . . . . .	228
11.1.2	Bayes–Markov Formulation . . . . .	230
11.2	Building the Prior Energy . . . . .	231
11.2.1	Detection Term . . . . .	231
11.2.2	Regularization Term . . . . .	234
11.3	Optimization . . . . .	236
11.4	Extension to the Case of an Image Pair . . . . .	239
<b>12</b>	<b>Reconstruction and Projections</b>	<b>243</b>
12.1	Projection Model . . . . .	243
12.1.1	Transmission Tomography . . . . .	243
12.1.2	Emission Tomography . . . . .	246
12.2	Regularized Reconstruction . . . . .	247
12.2.1	Regularization with Explicit Discontinuities . . . . .	248
12.2.2	Three-Dimensional Reconstruction . . . . .	252
12.3	Reconstruction with a Single View . . . . .	256
12.3.1	Generalized Cylinder . . . . .	256
12.3.2	Training the Deformations . . . . .	259
12.3.3	Reconstruction in the Presence of Occlusion . . . . .	261
<b>13</b>	<b>Matching</b>	<b>269</b>
13.1	Template and Hidden Outline . . . . .	270
13.1.1	Rigid Transformations . . . . .	270
13.1.2	Spline Model of a Template . . . . .	272
13.2	Elastic Deformations . . . . .	276
13.2.1	Continuous Random Fields . . . . .	276
13.2.2	Probabilistic Aspects . . . . .	282
