Preface	xi
Prologue	xiii
1 The road to Geneva	1
1.1 The scientific roots	1
1.1.1 Fusion energy in stars	1
1.1.2 Fusion reactions on Earth	4
1.1.3 The origins of plasma physics	7
1.2 In and out of secrecy	16
1.2.1 Programmes taking shape	16
1.2.2 Looking behind the curtain	20
1.2.3 The road to travel	26
2 Geneva 1958	31
2.1 Fast linear pinches or Z-pinches	31
2.2 Steady-state mirror confinement	35
2.3 Pulsed mirrors and theta pinches	40
2.4 Stellarators	43
2.5 Toroidal pinches	49
2.6 RF fields and other subjects	52
2.7 Looking back at Geneva	53
3 Open systems	56
3.1 Simple mirror machines	56
3.1.1 Mirror loss	57
3.1.2 The quest for burnout	58
3.1.3 MHD stability	61
3.1.4 Velocity-space instabilities in mirror machines	64
3.2 Tandem mirrors	68
3.3 Z-pinch and plasma focus	75
3.4 Theta pinches	80
3.5 Unconventional schemes	84
3.6 The status of open systems	89

4 Pulsed toroidal systems and alternative lines	90
4.1 High-beta stellarators	90
4.2 Stabilized and reversed-field pinches	92
4.3 Screw pinches	103
4.4 Field-reversed configurations and spheromaks	105
4.5 Internal-ring devices	114
4.6 Unconventional toroidal schemes	120
4.7 Status of alternative toroidal systems	122
5 Stellarators versus tokamaks	124
5.1 Stellarators: Bohm diffusion or not?	124
5.2 Tokamaks: from Geneva to Novosibirsk	129
5.3 Diagnosing the plasma	134
5.4 Stellarators trailing tokamaks	143
6 The dash to tokamaks	152
6.1 The tokamak goes abroad	152
6.2 Neutral beam heating	157
6.3 Disruptions and density limits	159
6.4 Sawteeth	161
6.5 Passing through purgatory	164
6.6 Hydrogen recycling and refuelling	168
6.7 Divertors	170
6.8 Neoclassical theory	172
6.9 Empirical scalings	176
7 The next generation	179
7.1 New machines	179
7.2 Radio-frequency heating	184
7.3 Non-inductive current drive	187
7.4 The switch to carbon	189
7.5 Beta limits	191
7.6 Confinement degradation	192
7.7 The H-mode	195
7.8 Attempts to understand confinement	197
7.9 Transport codes	200
8 The era of the big tokamaks	202
8.1 Building the big tokamaks	202
8.1.1 JET—the Joint European Torus	203
8.1.2 TFTR—the Tokamak Fusion Test Reactor	206
8.1.3 JT-60	207
8.2 Operation and results	210
8.2.1 Heating the big tokamaks	210

8.2.2 Keeping clean	212
8.2.3 Pushing to higher performance	214
8.2.4 Real fusion power at last	217
8.2.5 The end of the era	221
8.3 Improving the tokamak	221
8.3.1 Reactor-relevant divertor physics	222
8.3.2 Advanced tokamak scenarios	223
8.3.3 Spherical tokamaks	225
8.4 Towards ignition	227
9 Towards a fusion reactor	230
9.1 First thoughts	230
9.2 Second thoughts	233
9.3 Pioneering studies	236
9.4 Drawing fire	240
9.5 Economic and social aspects of fusion	244
9.6 Joining forces for the ‘next step’	247
9.7 ITER	249
9.7.1 The ITER EDA design	250
9.7.2 The physics basis	253
9.7.3 Decision and indecision	255
9.7.4 Back to the drawing board	258
10 Epilogue	261
References	270
Symbols	298
Glossary	301
Index	315
