CONTRIBUTORS . . . . .	ix
PREFACE . . . . .	xi
FUTURE CONTRIBUTIONS . . . . .	xiii

## Signposts in Electron Optics

P. W. HAWKES

I. Background . . . . .	1
II. Charged-Particle Optics . . . . .	3
III. Aberrations . . . . .	7
IV. Aberration Correction . . . . .	13
V. Monochromators . . . . .	17
VI. Wave Optics . . . . .	17
VII. Image Algebra . . . . .	21
References . . . . .	23

## Introduction to Crystallography

GIANLUCA CALESTANI

I. Introduction to Crystal Symmetry . . . . .	29
II. Diffraction from a Lattice . . . . .	53
References . . . . .	70

## Convergent Beam Electron Diffraction

J. W. STEEDS

I. Introduction . . . . .	71
II. More Advanced Topics . . . . .	82
Bibliography . . . . .	101
References . . . . .	101

## High-Resolution Electron Microscopy

DIRK VAN DYCK

I. Basic Principles of Image Formation . . . . .	106
II. The Electron Microscope . . . . .	120
III. Interpretation of the Images . . . . .	147
IV. Quantitative HREM. . . . .	151
V. Precision and Experimental Design . . . . .	167

VI. Future Developments . . . . .	168
References . . . . .	169

### Structure Determination through Z-Contrast Microscopy

S. J. PENNYCOOK

I. Introduction . . . . .	173
II. Quantum Mechanical Aspects of Electron Microscopy . . . . .	175
III. Theory of Image Formation in the STEM. . . . .	186
IV. Examples of Structure Determination by Z-Contrast Imaging . . . . .	191
V. Practical Aspects of Z-Contrast Imaging . . . . .	200
VI. Future Developments . . . . .	202
VII. Summary . . . . .	202
References . . . . .	203

### Electron Holography of Long-Range Electromagnetic Fields: A Tutorial

G. POZZI

I. Introduction . . . . .	207
II. General Considerations . . . . .	208
III. The Magnetized Bar . . . . .	212
IV. Electrostatic Fields: A Glimpse at Charged Microtips and Reverse-Biased $p-n$ Junctions. . . . .	218
V. Conclusion . . . . .	221
References . . . . .	221

### Electron Holography: A Powerful Tool for the Analysis of Nanostructures

HANNES LICHTÉ AND MICHAEL LEHMANN

I. Electron Interference . . . . .	225
II. Electron Coherence . . . . .	227
III. Electron Wave Interaction with Object . . . . .	229
IV. Conventional Electron Microscopy (TEM) . . . . .	231
V. Electron Holography . . . . .	238
VI. Summary . . . . .	254
Suggested Reading . . . . .	254
References . . . . .	254

### Crystal Structure Determination from EM Images and Electron Diffraction Patterns

SVEN HOVMÖLLER, XIADONG ZOU, AND THOMAS E. WEIRICH

I. Solution of Unknown Crystal Structures by Electron Crystallography . . . . .	257
II. The Two Steps of Crystal Structure Determination . . . . .	258
III. The Strong Interaction between Electrons and Matter. . . . .	259
IV. Determination of Structure Factor Phases. . . . .	260

V. Crystallographic Structure Factor Phases in EM Images. . . . .	265
VI. The Relation between Projected Crystal Potential and HRTEM Images. . . . .	266
VII. Recording and Quantification of HRTEM Images and SAED Patterns for Structure Determination . . . . .	267
VIII. Extraction of Crystallographic Amplitudes and Phases from HRTEM Images. . . . .	269
IX. Determination of and Compensation for Defocus and Astigmatism . . .	271
X. Determination of the Projected Symmetry of Crystals . . . . .	276
XI. Interpretation of the Projected Potential Map . . . . .	279
XII. Quantification of and Compensation for Crystal Thickness and Tilt . .	280
XIII. Crystal Structure Refinement . . . . .	282
XIV. Extension of Electron Crystallography to Three Dimensions. . . . .	285
XV. Conclusion . . . . .	286
References . . . . .	286

### **Direct Methods and Applications to Electron Crystallography**

C. GIACOVAZZO, F. CAPITELLI, C. CUOCCI, AND M. IANIGRO

I. Introduction . . . . .	291
II. The Minimal Prior Information . . . . .	292
III. Scaling of the Observed Intensities . . . . .	293
IV. The Normalized Structure Factors and Their Distributions. . . . .	295
V. Two Basic Questions Arising from the Phase Problem . . . . .	295
VI. The Structure Invariants . . . . .	298
VII. A Typical Phasing Procedure . . . . .	304
VIII. Direct Methods for Electron Diffraction Data . . . . .	306
References . . . . .	309

### **Strategies in Electron Diffraction Data Collection**

M. GEMMI, G. CALESTANI, AND A. MIGLIORI

I. Introduction . . . . .	311
II. Method to Improve the Dynamic Range of Charge-Coupled Device (CCD) Cameras. . . . .	312
III. ELD and QED: Two Software Packages for ED Data Processing . . . .	313
IV. The Three-Dimensional Merging Procedure . . . . .	314
V. The Precession Technique . . . . .	316
VI. Conclusion . . . . .	324
References . . . . .	325

### **Advances in Scanning Electron Microscopy**

LUDEK FRANK

I. Introduction . . . . .	327
II. The Classical SEM . . . . .	328

III. Advances in the Design of the SEM Column . . . . .	340
IV. Specimen Environment and Signal Detection . . . . .	357
References . . . . .	370

**On the Spatial Resolution and Nanoscale Feature Visibility in Scanning  
Electron Microscopy**

P. G. MERLI AND V. MORANDI

I. Introduction . . . . .	375
II. Backscattered Electron Imaging . . . . .	379
III. Secondary Electron Imaging . . . . .	391
IV. BSE-to-SE Conversion . . . . .	393
V. Conclusion . . . . .	396
References . . . . .	397

**Nanoscale Analysis by Energy-Filtering TEM**

JOACHIM MAYER

I. Introduction . . . . .	399
II. Elemental Mapping . . . . .	400
III. Quantitative Analysis of ESI Series . . . . .	405
IV. Mapping of ELNES . . . . .	409
V. Conclusion . . . . .	411
References . . . . .	411

**Ionization Edges: Some Underlying Physics and Their Use  
in Electron Microscopy**

BERNARD JOUFFREY, PETER SCHATTSCHNEIDER, AND CÉCILE HÉBERT

I. Introduction . . . . .	413
II. Elastic and Inelastic Collisions . . . . .	415
III. Counting the Elastic and Inelastic Events . . . . .	418
IV. Transitions to the Unoccupied States . . . . .	420
V. Electron–Atom Interaction . . . . .	422
VI. Orientation Dependence . . . . .	429
VII. Orders of Magnitude . . . . .	430
VIII. Mixed Dynamic Form Factor . . . . .	432
IX. Examples of Applications . . . . .	435
X. Images . . . . .	445
XI. Conclusion . . . . .	446
Appendix . . . . .	446
References . . . . .	447
